**AMENDMENT AND REPLY**

This Amendment and Reply (“Reply”) is in response to the Final Office Action dated April 4, 2014.

Amendments to the Specification begin on page **2** of this paper.

Amendments to the Claims begin on page **3** of this paper.

A Listing of the Status of Claims and Support for Requested Claim Changes begins on page **7** of this paper.

Remarks begin on page **8** of this paper.

**Amendments to the Specification**

Pursuant to 37 CFR 1.530 (d)(1) and (f), please replace the paragraph at col. 1, lines 8-12 of U.S. Patent No. 7,932,923 with the following replacement paragraph:

This application claims the priority to and is a continuation of U.S. patent application Ser. No. 09/987,707, filed Nov. 15, 2001, which claims priority to and is a continuation-in-part of U.S. patent application Ser. No. 09/694,712, filed on Oct. 24, 2000, now U.S. Pat. No. 6,954,498, each of which is incorporated herein by reference in their entirety.

**Amendments to the Claims**

Pursuant to 37 CFR 1.530 (d)(2) and (f), please cancel claims 42-81 and amend claims 1, 8, 9, 20, 22, 29, and 30 as follows:

1. (Amended) A method comprising:
  - detecting an object in a video from a single camera;
  - detecting a plurality of attributes of the object by analyzing the video from said single camera, the plurality of attributes including at least one of a physical attribute and a temporal attribute, each attribute representing a characteristic of the detected object;
  - selecting a new user rule after detecting the plurality of attributes; and
  - after detecting the plurality of attributes and after selecting the new user rule, identifying an event of the object that is not one of the detected attributes of the object by applying the new user rule to the plurality of detected attributes, wherein the applying the new user rule to the plurality of detected attributes comprises applying the new user rule to only the plurality of detected attributes;
    - wherein the plurality of attributes that are detected are independent of which event is identified,
    - wherein the step of identifying the event of the object identifies the event without reprocessing the video, and
    - wherein the event of the object refers to the object engaged in an activity.
  
8. (Amended) A method comprising:
  - detecting first and second objects in a video from a single camera;
  - detecting a plurality of attributes of each of the detected first and second objects by analyzing the video from said single camera, each attribute representing a characteristic of the respective detected object;
  - selecting a new user rule; and
  - after detecting the plurality of attributes, identifying an event that is not one of the detected attributes of the first and second objects by applying the new user rule to the plurality of

detected attributes, wherein the applying the new user rule to the plurality of detected attributes comprises applying the new user rule to only the plurality of detected attributes;

wherein the plurality of attributes that are detected are independent of which event is identified,

wherein the step of identifying an event of the object comprises identifying a first event of the first object interacting with the second object by analyzing the detected attributes of the first and second objects, the first event not being one of the detected attributes, and

wherein the event of the object refers to the object engaged in an activity.

9. (Amended) A video device comprising:

means for detecting an object in a video from a single camera;

means for detecting a plurality of attributes of the object by analyzing the video from said single camera, the plurality of attributes including at least a physical attribute and a temporal attribute, each attribute representing a characteristic of the detected object;

a memory storing the plurality of detected attributes;

means for selecting a new user rule after the plurality of detected attributes are stored in memory; and

means for identifying an event of the object that is not one of the detected attributes of the object by applying a selected new user rule to the plurality of attributes stored in memory, for identifying the event independent of when the attributes are stored in memory and for identifying the event without reprocessing the video, wherein the applying the new user rule to the plurality of detected attributes comprises applying the new user rule to only the plurality of detected attributes, and

wherein the event of the object refers to the object engaged in an activity.

20. (Amended) A method comprising:

providing a video device which detects an object upon analyzing a video from a single camera and which detects plural attributes of the detected object upon analyzing the video from said single camera, the plurality of attributes including at least a physical attribute and a temporal attribute; and

then, selecting a rule, which is not a rule used to detect any individual attribute, as a new user rule, the new user rule providing an analysis of a combination of the attributes to detect an event that is not one of the detected attributes, wherein the analysis of the combination of the attributes to detect the event comprises analyzing only the combination of the attributes, wherein the attributes to be detected are independent of the event to be detected, and wherein the event of the object refers to the object engaged in an activity.

22. (Amended) A non-transitory computer-readable storage medium containing instructions that when executed by a computer system cause said computer system to implement the following method comprising:

detecting an object in a video from a single camera;

detecting a plurality of attributes of the object by analyzing the video from said single camera, the plurality of attributes including at least one of a physical attribute and a temporal attribute, each attribute representing a characteristic of the detected object;

selecting a new user rule after detecting the plurality of attributes; and

after detecting the plurality of attributes and after selecting the new user rule, identifying an event of the object that is not one of the detected attributes of the object by applying the new user rule to the plurality of detected attributes, the event of the object being identified without reprocessing the video, wherein the applying the new user rule to the plurality of detected attributes comprises applying the new user rule to only the plurality of detected attributes;

wherein the plurality of attributes that are detected are independent of which event is identified, and

wherein the event of the object refers to the object engaged in an activity.

29. (Amended) A non-transitory computer-readable storage medium containing instructions that when executed by a computer system cause said computer system to implement the following method comprising:

detecting first and second objects in a video from a single camera;

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
