UNITED STATES PATENT AND TRADEMARK OFFICE

_____

BEFORE THE PATENT TRIAL AND APPEAL BOARD

_____

AMERICAN NATIONAL MANUFACTURING INC.,
Petitioner,

v.

SLEEP NUMBER CORPORATION
f/k/a SELECT COMFORT CORPORATION,
Patent Owner.

_____

Case No. IPR2019-00500
Patent No. 9,737,154 B2

_____

**DECLARATION OF GEORGE EDWARDS
IN SUPPORT OF PATENT OWNER'S RESPONSE**

TABLE OF CONTENTS

I, George Edwards, declare as follows:

1.   I am over the age of 21 years and am fully competent to make this Declaration. I make the following statements based on personal knowledge and, if called to testify to them, could and would do so.

2.   I have been retained on behalf of Sleep Number Corporation ("Sleep Number"). My fee is not contingent on the outcome of any matter or on any of the positions I have or will take in any matter. I have no financial interest in Sleep Number.

I.   Qualifications

3.   My qualifications as an expert in the fields of computer science, software engineering, embedded systems, and source code analysis are set forth in the paragraphs below and in my curriculum vitae, attached hereto as Appendix A.

4.   I graduated *summa cum laude* with a Bachelor of Science degree in computer science from Vanderbilt University in 2003. As an undergraduate, I was awarded the Vanderbilt School of Engineering Merit Scholarship. I spent one year in the MS program in computer science at Vanderbilt. During this time, I conducted research on application servers and code generators for distributed, real-time, and embedded systems, and I published my findings in several peer-reviewed conference papers and journal articles.

5.	I attended graduate school at the University of Southern California, where I was a USC Viterbi School of Engineering Dean's Doctoral Fellow and Annenberg Graduate Fellow. I received an MS in computer science in 2006 and a PhD in computer science in 2010 from USC. My MS research focused on distributed, real-time, and embedded systems. My PhD research focused on the analysis of distributed systems and their architecture, with an emphasis on mobile applications and embedded systems. My research was funded by several government agencies, such as the Department of Defense and the NSA, and large companies, such as Bosch and InfoSys. I presented my work at numerous conferences and in academic journals, industry magazines, and other publications. In 2008, I received the USC Computer Science Department's award for outstanding graduate student research.

6.	I am the founder of Quandary Peak Research, Inc., where I hold the titles of President and Computer Scientist. Quandary Peak Research is a software analysis company with twelve employees located in Los Angeles, Nashville, and Washington, D.C. Quandary Peak Research's software analysis services fall into three areas: (1) audits and compliance in highly regulated industries; (2) technical due diligence in mergers and acquisitions; and (3) litigation and intellectual property. In all three areas, Quandary Peak analyzes software and computer systems to answer questions about the development, structure, behavior, and quality of those systems.

7.   In my role as President, I manage the company's business affairs. In my role as Computer Scientist, I perform software analysis on behalf of clients. I have analyzed a broad variety of complex, real-world software systems, including many embedded software systems, mobile devices, and web and Internet applications. I have reverse-engineered the hardware and software designs of dozens of distributed systems. I have conducted many investigations of the design and implementation of these systems with respect to specific patent claims and other intellectual property considerations, such as copyright infringement and trade secret theft.

8.   I was formerly employed as a Lecturer of Computer Science at the University of Southern California. In that capacity, I taught Requirements Engineering (CSCI 568), a graduate-level software engineering class, and Data Structures and Algorithms (CSCI 102), an undergraduate-level software design and programming class.

9.   I also formerly worked as a research scientist and software engineer at Blue Cell Software LLC, Intelligent Systems Technology, Inc., IBM, and The Boeing Company. During my time with Blue Cell, I built a simulation-based software design and modeling environment. While at IBM, I conducted research on next-generation mobile architectures, such as large-scale mobile device provisioning

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
