

Series Gen 1 Blower

AKA Gen 1 on demand

Version V1

Feature Blower, rocker

2 port, 4 port

Hardware round remote

No shutoff sw

Software On Demand

Sales Jan 1998 – De

- The entire control unit was supplied to us by 9th Wave in Connecticut.
- The blower controllers were produced and sold in a two port version (one hose per side of a dual chamber mattress) and a 4 port version (two hoses per side in a dual chamber mattress allowed for separate mid body adjustment and shared head/foot adjustment on each side of the mattress).
- This controller utilized a motor inside the housing attached to a fan which directed air in to an open area and when the solenoid was energized it opened and allowed air to pass through the port.
- This was an on demand controller that had no memory settings or pressure sensors.
- This controller could not over pressurize the chambers because it could not generate pressure in excess of 1 psi.
- The hard wired remotes utilized a rocker switch to inflate and deflate the chambers. There was one rocker switch per remote for the two hose version and two rocker switches per remote for the four hose version.

Series Gen 2 Pump

AKA Gen 1 digital

Intelligent Air

Version **V1** (original)

Feature Compressor

Hardware Round or elliptical buttons, Arco transducers

Software Arco

- Hardwired remotes and power cord. Available with no memory that had a membrane switch or a memory remote that had a numeric pressure setting.
- The PCBA was from Arco as well as the Manifold.
- This manifold was a pre-existing manifold and we had to plug a few ports as you can see from the picture and then we had to add a piece of tubing with a branch Y that sits under the PCB between the manifold and the front of the housing to allow the pressure sensor line to connect to the transducer.
- We purchased these outer housings in the USA and drilled all holes in them and then did all the assembly in Corona, CA. This same housing was used on a medical pump that was produced by 9th Wave (Ed Gilchrest).
- These controllers had a real time pressure display and we

- These were direct drive controllers and when you pressed and held down the pump would inflate until the time the inflate button was held down. When you released the inflate button a real time pressure display would be shown. As the pressure starts to increase you continued to hold the inflate button down and the pump would turn off intermittently because it would think it was full and would realize it was not full and allow the pressure to increase again and this would continue to occur until it reached the maximum setting of 40 mmHg.
- The controller also had two memory settings. When you saved your favorite setting you could simply press the memory button and it would automatically go to that new "target" setting. When you turned the way to the target setting it would periodically release air a little at a time in order to

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
