The present invention provides an image photographing system, which permits a user to easily photograph images and place, orders for printing. A digital still camera is rented to the user with a prepaid card affixed thereto, the prepaid card serving to write the number of times into the digital still camera, and an image saving area dedicated to the user is opened on an image server connected to the Internet. After the user photographs images with the digital still camera, image data for images, which the user selects, is saved in the image data saving area via a portable apparatus, and the saved images can also be browsed therewith. When the user places an order for printing one of the saved images, the corresponding image data is sent to a print finishing dealer, and a photographic print is created.
