A user interface on a display enables user perception of information regarding a communications session that leverages an instant messaging platform. The user interface includes an instant messaging application user interface and one or more tear-off elements corresponding to ongoing instant messaging communications sessions. Each tear-off element is configured to enable perception and selection by a user of a corresponding instant messaging communications session. Also, each tear-off element is configured to be independently visually separated from other elements of the instant messaging application user interface and maintained as a separate entity on the instant messaging application user interface.
