1	January of 2010. The '842 patent is a continuation of U.S.
2	Patent Number 7,646,703 which claims priority to at least
3	July 2004. The '842 patent is directed to long training
4	sequences with minimum peak-to-average power ratios, and today
5	I would like to provide some background and a few common steps
6	that I hope the Court would find useful in today's discussion.
7	The '842 patent is taught against the backdrop of the
8	802.11 WiFi standard which is promulgated by IEEE, which is the
9	Institute for Electrical and Electronic Engineers. This
10	standard governs how different wireless devices are designed
11	and how they communicate with one another. Now as technology
12	evolves, the 802.11 standard has been amended periodically to
13	add additional capabilities, usually resulting in faster speeds
14	and better coverage.

16	standard was amended to implement OFDM, which stands for
17	orthogonal frequency-division multiplexing, to increase data
18	throughput. I'm going to show you what that means on slide 5.
19	At the top, you can see this is how data was transmitted OFDM.
20	Basically we have single carriers that are separated. When
21	OFDM is implemented, the carrier waves are essentially smushed
22	together allowing you to send more data found within the given
23	bandwidth. As you can see on the OFDM, there's an overlap in
24	the subcarriers which is necessary to achieve high data rates.
25	In slide 6, each colored peak is a subcarrier which
