Page 6 MR. MORTON: Good morning. This is 1 inspected the devices, does that mean basically 2 Cyrus Morton from the law firm of Robins Kaplan, 2 you had a version of them and looked at it, 3 on behalf of Petitioner Medtronic. With me also 3 checked it over outside of kind of the operating 4 is Christopher Pinahs. 4 context? MR. WINKELS: On behalf of patent 5 A. Yes. In more of a -- like an R&D lab-type 6 owner, Joe Winkels with the Carlson Caspers firm. 6 setting. 7 Q. And you note that you've performed testing on 7 With me from Carlson Caspers is Derek Vandenburgh. 8 the GuideLiner, QXM, and Medtronic guide extension 8 Also on the line is Ken Levitt, from The Dorsey 9 Firm, and Greg Smock from Teleflex. 9 catheters. THE VIDEOGRAPHER: Will the court 10 Do you see that? 11 reporter please swear in the witness. 11 A. Yes. PETER KEITH, 12 Q. What testing did you do on GuideLiner? 13 duly sworn, was examined and testified as follows: 13 A. On GuideLiner, I -- in addition to my visual **EXAMINATION** 14 inspections, I did some flexibility 15 BY MR. MORTON: 15 characterizations, some bending, stiffness 16 Q. All right. Good morning, Mr. Keith. I know 16 characterizations on different portions of the 17 you were deposed yesterday and a lot of your 18 background was covered, so I'll try not to be too 18 Q. Any other testing besides bending and 19 repetitive on that. But I do want to walk through 19 stiffness testing? 20 some things that are in your declaration, 20 A. I don't recall any others sitting here right 21 specifically your declaration for the '032 patent 22 in IPR2020-00127. 22 Q. Okay. And then how about same question for 23 23 the QXM Boosting Catheter; what testing did you do Do you have that available? 24 A. I do. 24 on that? 25 Q. Okay. And we'll be walking through that and 25 A. I did similar types of testing on that Page 7 1 through some of the other exhibits and prior art

2 as we go through the day. 3 So looking at that declaration, you 4 note in paragraph 18 that you have inspected the 5 GuideLiner devices, Boston Scientific Guidezilla, 6 QXM Boosting Catheter, and the Medtronic Telescope Do you see that?

7 guide extension catheter. 8 10 Q. And in addition to inspecting, you said you 11 performed testing? 12 A. Correct. 13 Q. Okay. So first, is it true you haven't 14 actually used any of those devices to perform a 15 procedure on a patient, correct? 16 A. That's correct. 17 Q. Have you witnessed any procedures using those 18 devices? 19 A. I have not witnessed any in person. I -- you 20 know, over the course of the years, I may have 21 seen some video snippets or certainly, you know,

22 read some references related to the use of these

23 devices, but I have not seen a device used in

25 Q. Okay. So for this case, when you say you

1 device, and I think I also did some dimensional

2 measurements. I think I -- yeah, that's --

3 sitting here right now, those are the types of

4 tests that I recall doing on that device.

5 Q. All right. And finally, for the Medtronic

6 Telescope guide extension catheters, what testing

7 did you perform?

8 A. Again, similar types of flexibility testing

9 that I did on the other devices.

10 Q. All right. Do you have, in your history or

11 experience, any experience as a librarian?

13 Q. Have you ever worked as an editor of an

14 engineering journal?

15 A. No.

16 Q. All right. Let's jump ahead.

You get into your declaration in,

18 say, paragraph 38. You're going through a lot of

19 background and teaching, and here you're teaching

20 about the use of balloons and stents.

21 Do you see that?

22 A. Yes.

23 Q. And can you tell me -- and take yourself back

24 into the 1990s -- how does a stent operate? What

25 is its function? How does it work?

3 (Pages 6 - 9)

888-391-3376

24 person.

Page 10

1 A. I think I outlined it pretty well in my

- 2 report. I'm not sure -- you want me to add more
- 3 to that or -- I guess I'm not quite sure what
- 4 you're asking. I mean, at a high level, they're
- 5 devices that are implanted into blood vessels to
- 6 dilate and maintain a dilation of a blockage.
- 7 Q. Okay. So does the stent dilate the vessel?
- 8 A. Typically the stents are mounted on a balloon
- 9 catheter, and it's the combination of the stent on
- 10 the balloon that's inflated to dilate the lesion.
- 11 Q. I think you said the stent is there to
- 12 maintain that dilation; is that correct?
- 13 A. Yeah. The stent is something that's left
- 14 behind as an implant in the patient.
- 15 Q. And does it have to then basically press out
- 16 against the artery that it's in, or how much force
- 17 does it have to apply to maintain that dilation?
- 18 A. It's really a function of what -- how much
- 19 resistance the dilated lesion is presenting back
- 20 onto the stent, so it could be different depending
- 21 on the patient's anatomy.
- 22 Q. All right. So -- but the stent is designed
- 23 to withstand whatever it needs to in order to
- 24 maintain that dilation, right?
- 25 A. I would say for the most part, yes.

Page 11

- 1 Q. If you want to follow along in your
- 2 declaration, you get to paragraph 57 and you're
- 3 now talking about -- you say, "Numerous variables
- 4 can impact how easy or difficult it is to treat a
- 5 particular patient lesion."
- 6 Do you see that?
- 7 A. Yes.
- 8 Q. Okay. Can you list all the variables you can
- 9 think of, please?
- 10 A. I -- again, at a high level, I think the
- 11 variables that can impact that are the nature of
- 12 the lesion itself, the tightness of the lesion.
- 13 Is it heavily calcified? Where is it located? Is
- 14 it in tortuous anatomy? Is there tortuous anatomy
- 15 leading up to it? Is it, you know, in a vein
- 16 graft versus in a native coronary artery?
- Those are some of the variables that
- 18 I can think of sitting here right now.
- 19 Q. All right. Let's go down on one of them.
- 20 Let's go with a tighter lesion. And I know you
- 21 talk about that here, and you say, "tighter lesion
- 22 will require a higher advancement force."
- Do you see that about halfway down
- 24 that paragraph?
- 25 A. Yes.

- 1 Q. So what is a normal advancement for?
- 2 A. I'm not sure I understand the question. What

Page 12

- 3 I said here is that -- I think I'm describing sort
- 4 of a relative comparison. If it's a tighter
- 5 lesion versus one that's not as tight; you may
- 6 have to push harder to get across that lesion.
- 7 Q. Right. But from an engineering standpoint,
- 8 is that something that can be measured, that you
- 9 can talk about whether a normal advancement force
- 10 versus a higher advancement force?
- 11 A. I think it can be measured. I don't have
- 12 those numbers in my head right now.
- 13 Q. So when you say "higher," do you have any way
- 13 Q. 50 when you say higher, do you have any
- 14 to quantify this or give me any idea of what
- 15 you're talking about in terms of a higher
- 16 advancement force?
- 17 A. Sitting here right now, I can't really
- 18 quantify that, but I think it's -- I think one
- 19 could measure that in different types of lesions.
- 20 Q. How would you measure it?
- 21 A. Again, I mean, I haven't thought about it. I
- 22 don't know exactly how you'd measure it. But, you
- 23 know, I think it would be possible to measure --
- 24 with a force gauge measure, you know, an
- 25 advancement force on the proximal end of the

Page 13

- 1 device. You could measure a force being applied 2 to a lesion if you were doing more of a bench-type
- 3 test. I think there are ways that it could be
- 4 done, but, again, I haven't given that a whole lot
- 5 of thought.
- 6 Q. Have you ever done that in your long history
- 7 of working on catheters and catheter design?
- 8 A. I may have. I don't recall specifically.
- 9 Q. And you talk about here the reactive force
- 10 for the end, right, and it could cause a guide
- 11 catheter to back out.

Do you see that?

- 13 A. Yes.
- 14 Q. So for that reactive force, again, is there
- 15 any way to quantify that for me or tell me how
- 16 much force will be required to make the guide
- 17 catheter back out?
- 18 A. Again, I mean, I think it would depend on
- 19 different factors, but for a given situation, I
- 20 think that is something that could possibly be
- 21 measured. I wouldn't know exactly how to do that
- 22 just off the top of my head.
- 23 Q. Okay. And so is there sort of a range of
- 24 forces that might cause it to back out?
- 25 A. There probably is, but I don't know exactly

4 (Pages 10 - 13)

Veritext Legal Solutions

888-391-3376

Page 14

1 what those would be.

- 2 Q. You don't know what the minimum force would
- 3 be required to cause it to back out, right?
- 4 A. Well, again, it would depend on other factors
- 5 too. It could depend on the guide catheter
- 6 itself, the anatomy. But for a given scenario, I
- 7 think that's something that could be measured.
- 8 Q. Okay. And how could it depend on the guide
- 9 catheter?
- 10 A. Shape, size, construction. Those things can
- 11 influence how much -- how easily a guide catheter
- 12 could back up -- back out. Sorry.
- 13 Q. Okay. And how about the anatomy you said?
- 14 How could that impact how much a reactive force is
- 15 required to have it back out?
- 16 A. Some things I think would be the size of the
- 17 aorta, how the guide catheter is positioned within
- 18 the aorta relative to the -- to the coronary
- 19 artery. Those are a couple examples.
- 20 Q. Okay. And are there any other factors
- 21 besides the structure or whatever of the guide
- 22 catheter and the patient anatomy that can affect

2 Q. Okay. And, again, this reactive force, this

3 is something that you could measure, but you 4 haven't done that for this case; is that right?

6 Q. Let's talk about some of the other things

10 A. I believe that it works to some extent. It's

13 because of the concerns that can come about by

14 deep seating a conventional guide catheter into a

16 Q. Sure. And I'm aware of the concerns to the 17 anatomy. I want to focus just on how much

18 additional backup support, if you will, can be

Do you know that in any kind of

21 qualitative or quantitative sense, how much extra

22 force can be applied to crossing a lesion if the

25 depend on some different variables, like, you

24 A. I don't. Again, I think that also would

11 just a very risky thing to consider, so it's --

12 it's -- I think it tends to be rarely employed

7 that were done to address this backout problem.

How well does deep-seating work in

- 23 the amount of reactive force required for the
- 24 guide catheter to back out?

5 A. Not specifically. Correct.

9 terms of preventing backout?

19 offered by deep-seating.

23 guide catheter is deep-seated?

1 now.

15 patient.

20

25 A. There may be. I can't think of any right

1 know, the guide catheter itself, the construction

Page 16

Page 17

- 2 details, how far it's being deep-seated.
- Those are some of the variables that
- 4 could affect that if you were to deep seat a guide
- 5 catheter.
- 6 Q. All right. And how about another thing that
- 7 you discuss in here, the mother and child
- 8 arrangement for addressing backup support like the
- 9 Shockey patent you discuss. In the mother and
- 10 child context, do you have any idea how much extra
- 11 force can be applied?
- 12 A. I don't have a specific number for that.
- 13 And, again, I think it would depend on some
- 14 variables of what that mother and child
- 15 arrangement is.
- 16 Q. Again, in the mother and child context, you
- 17 could measure how much extra backup support that's
- 18 giving, but that's not something you've done for
- 19 this case, right?
- 20 A. I think it is something that could be
- 21 measured. I have not specifically done that.
- 22 Q. Okay. Paragraph 61, your -- again, here
- 23 you're talking about teaching mother and child was
- 24 known prior to May 2006 to provide backup support;

25 is that right?

Page 15

1 A. Correct.

- 2 Q. And, in fact, mother and child was known to
- 3 provide increased backup support for, like, a
- 4 decade or more prior to May 2006, right?
- 5 A. I don't know how long it was known.
- 6 Q. You don't know when the earliest mother and
- 7 child catheters were?
- 8 A. Sitting here right now, I don't recall that.
- 9 Q. In paragraph 62 of your declaration, you say,
- 10 "The Shockey patent was 1991."
- 11 Does that refresh your recollection
- 12 that it's been more than a decade of mother and
- 13 child known to provide backup support prior to
- 14 2005, 2006 time frame?
- 15 A. Yes. So that particular reference is from
- 16 1991
- 17 Q. Let's go back to your example in paragraph 61
- 18 that you give.
- 19 You say the child catheter is more
- 20 flexible than the larger diameter guide catheter,
- 21 right?
- 22 A. I believe so.
- 23 Q. Well, what materials is the child catheter
- 24 typically made of?
- 25 A. It would depend on what child catheter you're

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## **Real-Time Litigation Alerts**

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## **Advanced Docket Research**

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

### **Analytics At Your Fingertips**

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

#### API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

#### **LAW FIRMS**

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

#### **FINANCIAL INSTITUTIONS**

Litigation and bankruptcy checks for companies and debtors.

### **E-DISCOVERY AND LEGAL VENDORS**

Sync your system to PACER to automate legal marketing.
