Guidant Corporation's Vascular Intervention division is diligently working to eliminate the use of CFC-113 in the manufacturing process.

CORONARY STENT SYSTEMS

Small Vessel

Small vessel stents combine low profiles with a flexible stent design specifically for treatment of vessels that are 2.0 mm to 2.5 mm in size.

*ML PIXEL™ is indicated for patients presenting with abrupt or threatened abrupt closure.

ATTRIBUTES

- Thinner struts for increased flexibility and larger lumens
- Low system profiles for excellent deliverability and crossability
- Noncompliant balloon for controlled growth

Workhorse

The flexibility, conformability and deliverability of workhorse stents make them ideally suited for the majority of cases.

ATTRIBUTES

- Low profiles for easy lesion access, enhanced track and stent recross
- Clinically proven stent pattern designed to maintain vessel shape in tortuous anatomies while providing optimal scaffolding
- Minimal balloon overhang to reduce balloon interaction outside of the stent upon expansion

Large Vessel

The scaffolding and radial strength provided by large vessel stents make them a superb fit for large native coronary arteries and saphenous vein grafts.

ATTRIBUTES

- Low unsupported surface area and high metal-to-artery ratio for excellent scaffolding in large native vessels and saphenous vein grafts
- High radial strength to minimize recoil
