Subject: Re: web grammar

Thanks, Valera. Please see my notes below. I will create exact prompts based on what you gave me. Let me know on the other things.

Alex

> Weather:

> Please say/touch tone 5-digit zip or 3-digit area code or say state name

> (we match area to zip code

> if state is said we ask city)

## Valera,

How many cities are we going to have. I think we can ask for a major city first as a most natural thing, and then mention area code or zip code:

" To hear the latest weather report, please, say a major city or a state name or speak a three digit area code or a five digit zip code."

BTW, are we going to provide info on major international cities like Paris, London, etc

- > Please enter correct number of digits (if no 5 or 3)
- > We cannot process this zip(area) code (if we cannot match it)
- > Please say it again.
- > Please say correct US state name (if we cannot find the state)
- > Please say city name (we match state and city to zip code as well)
- > Sorry we cannot process city ... (if we cannot match it)
- > Please try again or say "give me cities list"
- > (we can read back all cities for the state specified )

> Stock

>

>

- > Please say the company name of your portfolio
- > or say major company name
- > ( we match company name with the ticker)

>

We may need to say this:

( I now think we may not have any other companies outside the portfolio in the first release )

Parus Exhibit 2044

Can you pull those indexes as well? Can we provide them total on the portfolio similar to Yahoo portfolio?

```
> We cannot process the ... company ( if we fail to recognize)
> Air Delays
> Please say airline name (we match to abbreviation)
> Sorry, we cannot process ... airline (if we do not have it)
> Now say or touch tone the flight number
> If it flies not today please say Month and a day
I'd rather do the date because of the time zone confusion with today/tomorrow.

We will say: "Please, say the date of the flight, for example April twenty five"
```
