**Subject:** Re: html to text/speech script

It works only on vsc21.vail.

Wvsc01.webley doesn't have the needed per version with additional modules.

The format is:

html2csv.pl follow <http://www-test.webley/faq.html>

instead "follow" you can use "read" if your file is in the directory instead internet.

The output looks like

```
"text", "", " Webley. "  
"link", "http://www-test.webley/home.html", "Home, Webley."  
"link", "http://www-test.webley/demo_opener.html", "Features Dem."  
"link", "http://www-test.webley/join.html", "Test Drive!"  
"link", "http://www-test.webley/day.html", "Day in the Life Demo."  
"link", "http://www-test.webley/faq.html", "FAQ."  
"text", "", ". At your Service!. Frequently Asked Questions. Updated on 8/1/1999. If you have additional  
questions about Webley, please forward an e-Mail message to our "  
"email", "webmaster@webley.com", "webmaster"  
"text", "", ". Or, call "  
"phone", "8884446400", "Webley customer service"  
"text", "", " to speak with a live Webley Representative to join or for more information. "  
"link", "http://www-test.webley/what_webley_do.html", "What does Webley do?"
```

To put webley tags inside html script you'd do like this:

```
Or, <B>call <!--webley name="phone" value="8884446400" text="Webley customer service"--  
>888.4.WEBLEY<!--webley--></B> to speak with a live Webley Representative to join  
-- or for more information.<BR>
```

The "text" value will substitute the text inside "webley" tags. So in the example above it'd be translated into the next 3 lines:

```
"text", "", ". Or, call "  
"phone", "8884446400", "Webley customer service"  
"text", "", " to speak with a live Webley Representative to join or for more information. "
```

This way allows you to have any new webley tags as you wish.
