[57] ABSTRACT

A controller **20** for a vehicle powertrain, the powertrain comprising an electric motor **16** powered by a battery and an engine **14** powered by fossil fuel. The engine **14** is typically an internal combustion petrol engine. The controller **20** is operative to use maps stored in memory to control the torque contributions from the engine and the motor so as to maintain a desired relationship between the contributions of the electric motor **16** and the engine **14** towards the powering of the vehicle, and the controller is adaptive in that it is arranged to adapt said maps by altering one or more values stored therein to obtain a desired relationship.
