(57) **ABSTRACT**

A cargo hold system is for use in motor vehicles. The system comprises a molded floor mat configured to fit in a defined area of the vehicle, e.g. a back cargo area. The molded floor mat is made from a carpet which has looped fibers extending from its surface. The system also includes at least one rigid retention member having at least two linear legs connected at substantially right angles. The retention member further has an upstanding vertical wall and a substantially flat bottom wall. The bottom wall has adhered to it hook-type fasteners. In use, the hook-type fasteners on the rigid retention member interact with the looped fibers of the molded floor mat to create a rearrangeable system to hold in place a variety of different shaped and sized articles.
