(57) **ABSTRACT**

A system and associated method that allow particular
requests to be executed at some point in the future without
specifying the exact time or necessarily a precise location.
The execution time of the request is linked to the arrival of
a person or object at, or near a geographic destination
location. When a person, an object, or a group of persons or
objects, arrives at the destination location, or comes close to
it, the request to interact will be executed. The proximity
threshold can be adjustable or programmable.
