(54) Drive train control for a motor vehicle

(57) An integrated drive train control 1 for a motor vehicle interprets the position of the accelerator pedal 21 and of the brake pedal 20 as a wheel torque that is desired by the driver, and has a calculating device 12 which receives the positions of the accelerator pedal 21 and the brake pedal 20 and produces from these positions central control parameters for the drive sources 9 and the decelerating units 11 of the drive train. A classification device 1.02 evaluates the sensor signals S from the drive train and classifies operating parameters of the motor vehicle.

At least one drawing originally filed was informal and the print reproduced here is taken from a later filed formal copy.
