'554 Patent Claim 1

1. A physiological measurement system comprising:
a physiological sensor device comprising:
a plurality of emitters configured to emit light into tissue of a user;
at least four detectors, wherein each of the at least four detectors has a corresponding window that allows light to pass through to the detector;
a wall that surrounds at least the at least four detectors;
and
a cover that operably connects to the wall and that is configured to be located between tissue of the user and the at least four detectors when the physiological sensor device is worn by the user, wherein:
the cover comprises a single protruding convex surface, and
at least a portion of the cover is sufficiently rigid to cause tissue of the user to conform to at least a portion of a shape of the single protruding convex surface when the physiological sensor device is worn by the user; and

a handheld computing device with the physiological sensor device, the handheld computing device comprising:
one or more processors;
one or more memory devices;
a touch-screen interface;
a touch-screen interface;
wherein:
the user interface is responsive to a touch-screen interface;
the user interface is responsive to a touch-screen interface;
the user interface is responsive to a touch-screen interface;
the user interface is responsive to a touch-screen interface;
the user interface is responsive to a touch-screen interface;

'554 Patent Claims 11, 17, 28

11. The physiological measurement system of claim 1, wherein the single protruding convex surface has a height between 1 millimeter and 3 millimeters.

17. The physiological measurement system of claim 1, wherein the single protruding convex surface has a height greater than 2 millimeters and less than 3 millimeters.

28. The physiological measurement system of claim 1, wherein the single protruding convex surface has a height greater than 2 millimeters and less than 3 millimeters.

'553 Patent Claim 1

1. A noninvasive optical physiological sensor comprising:
a plurality of emitters configured to emit light through a cover of a user;
at least four detectors, wherein at least one of the at least four detectors is configured to detect light that is attenuated by tissue of the user, and wherein the at least four detectors are arranged on a substrate;
a wall configured to circumscribe at least the at least four detectors; and
a cover configured to be located between tissue of the user and the at least four detectors when the noninvasive optical physiological sensor is worn by the user, wherein the cover comprises a single protruding convex surface operable to conform to tissue of the user, wherein at least a portion of the single protruding convex surface is in contact with the tissue of the user when the noninvasive optical physiological sensor is worn by the user, and wherein the wall connects to the substrate and the cover.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
