Enzymotec takes advantage of its technology platform to biocatalytically structure, synthesize, and enrich phospholipids, triglycerides and phytosterols

R&D Strategy

Enzymotec develops a variety of unique and cost-effective lipid-based ingredients for functional food and dietary supplements. In order to ensure a continuous streamline of novel ingredients, Enzymotec is active in various development areas as listed below.

Clinical trials

Enzymotec's advanced products are backed by clinical trials performed by leading scientists at internationally-renowned institutes, both in Israel and abroad.

Regulatory activity

An essential part of product development is to ensure the legal/regulatory status of the ingredients. Enzymotec is globally active in its efforts to ensure GRAS, NDI, Novel food or any other legal status required for the marketing and distribution of the ingredients in various geographical areas.

IP strategy

Enzymotec defends its IP position by creating clusters of patents, which cover process, composition, health benefits and potential applications for its various products.

Processing Technology

One of Enzymotec's key advantages is its capacity to harness advanced processing tools and processing aids.

Analytical tools

Enzymotec uses state-of-the-art methods and tools, including: HPLC, HPTLC, GC or NMR to ensure the quality of its product and the satisfaction of its customers.
