Internet Archive
300 Funston Avenue
San Francisco, CA 94118

AFFIDAVIT OF ELIZABETH ROSENBERG

1. I am a Records Request Processor at the Internet Archive, located in San Francisco, California. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browseable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). A web browser may be set such that a printout from it will display the URL of a web page in the printout's footer. The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of browser printouts of the Internet Archive's records of the archived files for the URLs and the dates

specified in the footer of the printout or an attached coversheet (in the case of records for which a browser does not provide a ready option to print a URL in the footer, e.g., in the case of a PDF file).

7. I declare under penalty of perjury that the foregoing is true and correct.

Brief Introduction

Beijing SBT RUYAN Technology & Development Co., Ltd (The Company) (Abbr. RUYAN Tech.) is a subsidiary company, owned by Hong Kong SBT Corporation. The company engages in patented products, R & D, production & management, domestic and international market development. The company focuses on the development of chemical electrical commodities but also cooperates with other hi-tech industries such as ultrasonic electrical appliances, chemical medication, precise chemical engineering, etc. The Company plays a world leading role in technology, research ability and product conception.

RUYAN Tech. owns several intellectual and property rights with its high-end patented products. The company has constructed a whole independent R & D center, an outstanding production basement and a functional marketing operation system for both domestic and international markets. Under the direction of "fashional and advanced technology, tasty and healthy lifestyle", namely the enterprise thought. Also guided by "technologically, large-scaled, intensification", the company has become a grouped enterprise, who specializes in "public healthy development and raising living standard".

"RUYAN" product series (The Product) developed by The Company have combined modern micro electronic techniques, biological techniques together with the conception of healthy lifestyle. The Company made a breakthrough within the "smoking cessation" area, creating an outstanding initial production line for "smoking cessation products" worldwide, and this hi-tech product is unique for "smoking cessation" in the world. The Company's R & D thoughts and patented technology represent the highest standards within the related professional areas. The social publicity process of the product has have been recommended as a "smoking cessation revolution" by WHO and reputable experts. In order to protect The Company's ethnic intellectual and property rights, The Product applied for a worldwide patent in 2003.

The absolute advantage on products and technology, that RUYAN Tech. relies upon, assists The Company in constructing marketing channels and scientific logistic operational system around the world. From this perspective, RUYAN Tech. will serve the public better by creating a scientific healthy living environment and building a higher, wealthier lifestyle!

A standard RUYAN Cigar set includes one electronic cigar, two Lithium ion batteries and one charger. RUYAN' Cigarette consists of some micro-electronic components such as airflow sensor, control circuit, executive circuit, high-power integrated circuit, high-frequency ultrasonic sounder, atomizing chamber mask, built-in lithium ion battery, by which it can carry out such high-tech humanized functions as airflow sensing, smoke simulation, smoke temperature simulation, standby at any moment. Meanwhile, as far as the biological technology is concerned, it can make smokers enjoy the same pleasure as that of traditional cigarette when inhaling the nicotine smog droplet, imitating the whole process of smoking. RUYAN Cigarette creates a healthy smoking cultural atmosphere, and has been eulogized by authoritative experts as the perfect combination of modern micro-electronic technology, biological technology and the conception of healthy life.

In the body of RUYAN cigarette, low thickness nicotine liquid enters atomizing cell after ultramicro atomizing pump pressurizing and is supercritically atomized into about 0.5-1.5um fog drops in the high-frequency ultrasonic vibration field. Then the smog droplets will be dispersed into aerosols by the inhaled airflow and finally the aerosol will be formed into vapour which simulates the cigarette smoke. Before supercritical atomizing, the liquid should be heated up to reduce its surface tension to the extent of easiest atomizing. RUYAN cigarette not only simulates cigarette smoke but also the temperature of common cigarette smoke (50-60 °C), which is similar to common cigarette and can refresh and satisfy the joviality and long-term psychological habit of smokers so as to achieve humanized healthy smoking; and at the same time, it simulates cigarette and does not contain such hazardous substance as carbon monoxide, nitrogen dioxide, hydrocyanic acid, acrolein arsenic, lead, hydrogyrum, perishing the harm of second-hand smoking to surrounding crowd so as to achieve the authentic humanized smoking.

Smokers who decide to abstain from smoking can use RUYAN cigarette to fulfill their purposes. The RUYAN cigarette are made into four basic tastes such as the high, medium, low and naught nicotine thickness to meet different requirements of smokers. According to the theory of WHO-recommended NRT, '4-step smoking

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
