

Neonode N1m first impressions

CATEGORIES

Apple, experiences, iPhone, N1m, N2, N95, Neonode, Nokia, thoughts, Windows Mobile

It's been almost a month since I [unboxed](#) my Neonode N1m, but then my [Nokia N95](#) came along and stole the show :)

Nonetheless, I've been playing with my N1m on and off, and I'm very impressed! It's definitely a [best kept secret](#) device – Neonode's touch-based user interface with gesture recognition (also featured on the upcoming [N2](#)) is extremely intuitive...

The phone even offers tactile feedback through the vibration feature when using the touch screen! Hmmm, I wonder if the iPhone works like that... Are you paying attention, Apple?

Pros:

- Great touch-based user interface
- Fast operation
- Smartphone ([Neno](#) over Windows CE 5.0 .NET)
- Well made device
- Very small and light
- Good battery life
- Good music player (but no AAC support)
- Good HTML web browser
- Good GPRS performance
- Decent phone reception and audio quality
- USB mass storage device when powered off (with standard connector)
- USB charger

Cons:

- Dim, scratch-sensitive screen
- So-so camera (1 megapixel)
- No Bluetooth
- No email client by default (but here's one available for [download](#))
- No speakerphone?
- No iSync support (but ActiveSync support)
- No Java support
- Tri-band GPRS only
