

COMBINING AUXILIARY FINGER INPUT WITH THUMB TOUCH
FOR SINGLE-HANDED MOBILE DEVICE INTERFACES

Abstract

This thesis reports on the use of auxiliary finger input to complement touch-only interactions on mobile devices. While a majority of touchscreen based mobile devices support multi-touch input, mobile device interactions in one-handed usage scenarios are usually limited to a single point of contact with the screen. In most cases, the thumb is the preferred source of touch input. Selecting user interface elements, such as buttons and sliders, requires frequent movement of the thumb, occludes a display, and, to reach targets, demands frequent adjustments of grip.

To tackle these usability problems of single-handed usage scenarios, we explored the use of the auxiliary fingers — that is, the fingers that grip, support, and make contact with a mobile device — as additional input channels. Sensing input from the auxiliary fingers might lead to significantly less thumb movement, with target selection and other interactions distributed across all five digits. We built a series of mobile device prototypes that sense isometric pressure at different areas on their surfaces. To evaluate the performance of this interaction paradigm, we measured task completion times and error rates for common mobile tasks, including document formatting, application switching, and map navigation, and validated that the use of additional fingers for input led to performance gains. We follow-up with a study to measure each finger's ability to apply pressure on the side of the device and measured the effect of this pressure on the thumb's range of motion around the screen. Finally, we provide software and hardware design recommendations based on these studies.

Co-Authorship

The prototype design and experimental evaluation on pages 24-43 were conducted collaboratively with David Holman and Amartya Banerjee.

Table of contents

CHAPTER 1 INTRODUCTION.....	1
1.1 BACKGROUND AND MOTIVATION	1
1.2 CONTRIBUTIONS AND THESIS OUTLINE	2
CHAPTER 2 RELEATED WORK.....	5
2.1 SOFT MACHINES.....	5
2.2 ONE-HANDED MOBILE INTERACTION	9
2.3 GRASP-BASED INTERACTION	12
2.4 AUGMENTED MOBILE INTERFACES (SENSOR FUSION)	13
2.5 DEFORMABLE MOBILE INTERACTIONS	15
2.6 ISOMETRIC FORCE BASED INTERACTION	16
2.7 HAND ANATOMY AND FUNCTION	17
2.7.1 <i>Anatomy</i>	17
2.7.1.1 Forearm and Extrinsic Muscles	17
2.7.1.2 The Wrist.....	18
2.7.1.3 The Hand.....	19
2.7.1.4 The Digits	19
2.7.2 <i>Hand Function</i>	20
2.7.2.1 Internal and Manipulation Forces.....	20
2.7.2.2 Finger independence of movement.....	21
2.7.2.3 Movement Speed.....	22
CHAPTER 3 THE UNIFONE PROTOTYPE	24
3.1 UNIFONE DESIGN PROCESS.....	24
3.1.1 <i>Unifone Auxiliary Touch Gestures</i>	30
3.2 DISTINGUISHING HOLDING GRASP AND INPUT SQUEEZE.....	31
3.3 FORCE SENSORS	31
3.4 PHYSICAL CONNECTION TO DEVICE	33
3.5 SENSOR PROCESSING AND DEVICE COMMUNICATION	34

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
