

PCE.js Mac Plus emulator running Mac OS System 7 — a hack by [James Friend](#)

PCE.js emulates classic computers in the browser.

This is a simulation of a Classic Macintosh from 1984, running System 7.0.1 with MacPaint, MacDraw, and Kid Pix. If you want to try out more apps and games see [this demo](#).

It's based on Hampa Hug's excellent [PCE](#) emulator, which I [ported to the web](#).

Please be patient as you may see a few seconds of black screen upon loading, but it's worth it.

More Demos:
