ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 1228 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

Bib Data Sheet

CONFIRMATION NO. 1226

Form containing fields for SERIAL NUMBER (10/315,250), FILING OR 371(c) DATE (12/10/2002), CLASS (715), GROUP ART UNIT (2171), ATTORNEY DOCKET NO. (NEONODE.P004), APPLICANTS (Magnus Goertz, Stockholm, SWEDEN), CONTINUING DATA, FOREIGN APPLICATIONS, FOREIGN FILING LICENSE GRANTED (01/16/2003), Foreign Priority claimed, 35 USC 119 (a-d) conditions, STATE OR COUNTRY (SWEDEN), SHEETS DRAWING (4), TOTAL CLAIMS (18), INDEPENDENT CLAIMS (1), ADDRESS (75660), TITLE (USER INTERFACE FOR MOBILE HANDHELD COMPUTER UNIT), and FILING FEE RECEIVED (1940) with a list of fee options.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
 or **Fax** (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

75660 7590 12/01/2011
 Soquel Group, LLC
 P.O. Box 691
 Soquel, CA 95073

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
 Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
 "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list
 (1) the names of up to 3 registered patent attorneys or agents OR, alternatively,
 (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

1 Soquel Group LLC
 2 _____
 3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)
 PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE (B) RESIDENCE: (CITY AND STATE OR COUNTRY)

Neonode Inc. Santa Clara, CA

Please check the appropriate assignee category or categories (will not be printed on the patent): Individual Corporation or other private group entity Government

4a. The following fee(s) are submitted:

- Issue Fee
- Publication Fee (No small entity discount permitted)
- Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)

- A check is enclosed.
- Payment by credit card. Form PTO-2038 is attached.
- The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

- a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.
- b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature M.A. Berger

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

COMMENTS ON STATEMENT OF REASONS FOR ALLOWANCE

In the Notice of Allowability mailed December 1, 2011, the Examiner allowed claims **1 - 14, 18, 48** and **49**. Applicant acknowledges the Examiner's statements of Reasons for Allowance of the above-referenced patent application and agrees that the claimed subject matter is patentable. However, applicant takes no position regarding the Reasons for Allowance presented by the Examiner other than the positions applicant may have previously taken during prosecution. Therefore, the Examiner's Reasons for Allowance should not be attributed to applicant as an indication of the basis for applicant's belief that the claims are patentable. Furthermore, applicant respectfully asserts that there may also be additional reasons for patentability of the claimed subject matter not explicitly stated in this record and applicant does not waive his rights to such arguments by not further addressing such reasons herein.

Respectfully submitted,
SOQUEL GROUP LLC

 b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature M.A. Berger
 Typed or printed name Marc A. Berger

Date December 4, 2011
 Registration No. 44029

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Electronic Patent Application Fee Transmittal

Application Number:	10315250			
Filing Date:	10-Dec-2002			
Title of Invention:	USER INTERFACE			
First Named Inventor/Applicant Name:	Magnus Goertz			
Filer:	Marc Aron Berger			
Attorney Docket Number:	NEONODE.P004			
Filed as Large Entity				
Utility under 35 USC 111(a) Filing Fees				
Description	Fee Code	Quantity	Amount	Sub-Total in USD(\$)
Basic Filing:				
Pages:

-------------------------------------	---------

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
 or **Fax** (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

75660 7590 12/01/2011
 Soquel Group, LLC
 P.O. Box 691
 Soquel, CA 95073

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)
 A check is enclosed.
 Payment by credit card. Form PTO-2038 is attached.
 The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)
 a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.
 b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).
 NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature: Marc A. Berger Date: December 4, 2011
 Typed or printed name: Marc A. Berger Registration No. 44029

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DATE MAILED: 12/01/2011

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.

10/315,250 12/10/2002 Magnus Goertz NEONODE.P004 1226

TITLE OF INVENTION: USER INTERFACE

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

nonprovisional YES \$870 \$300 \$0 \$1170 03/01/2012

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
 Commissioner for Patents
 P.O. Box 1450
 Alexandria, Virginia 22313-1450
 or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

75660 7590 12/01/2011
 Soquel Group, LLC
 P.O. Box 691
 Soquel, CA 95073

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

DATE MAILED: 12/01/2011

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 872 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 872 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No.	Applicant(s)	
	10/315,250	GOERTZ, MAGNUS	
	Examiner	Art Unit	
	RYAN PITARO	2171	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to the amendment filed 6/09/2011.
2. The allowed claim(s) is/are 1-14, 18, 48 and 49.
3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some* c) None of the:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
 - 1) hereto or 2) to Paper No./Mail Date _____.
 - (b) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Marc Berger on 10/6/2011.

The application has been amended as follows:

1. (currently amended) A non-transitory computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which a representation of a function is provided, wherein the representation consists of only one option for activating the function and wherein the function is activated by a multi-step operation comprising (i) an object touching the touch sensitive area at a location where the representation is provided and then (ii) the object gliding along the touch sensitive area away from the touched location, wherein the representation of the function is not relocated or duplicated during the gliding.

Claims 1-14,18,48-49 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art is silent in teaching a non-transitory computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising: a touch sensitive area in which a representation of a function is provided, wherein the representation consists of only one option for activating the function and wherein the function is activated by a multi-step operation comprising (i) an object touching the touch sensitive area at a location where the representation is provided and then (ii) the object gliding along the touch sensitive area away from the touched location wherein the representation of the function is not relocated or duplicated during the gliding.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN PITARO whose telephone number is (571)272-

4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chat Do can be reached on 571-272-3721. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Mail Stop AMENDMENT
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.111

Sir:

In response to the Office Action dated June 7, 2011,
applicant respectfully requests that the above-identified application be
amended as follows.

IN THE CLAIMS:

Please cancel claims **15** and **16** without prejudice.

Please substitute the following claims for the pending claims with the same number:

1. (previously presented) A non-transitory computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which a representation of a function is provided, wherein the representation consists of only one option for activating the function and wherein the function is activated by a multi-step operation comprising (i) an object touching the touch sensitive area at a location where the representation is provided and then (ii) the object gliding along the touch sensitive area away from the touched location.

2. (previously presented) The computer readable medium of claim **1**, wherein the function, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. (previously presented) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. (previously presented) The computer readable medium of claim **1**, wherein the function, when activated, causes the user interface to display a keyboard and a text field.

5. (previously presented) The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. (previously presented) The computer readable medium of claim **1**, wherein the function, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. (previously presented) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files.

9. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and the user interface enables list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list.

10. (previously presented) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down by one whole page.

11. (previously presented) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position.

12. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is advanced one step by gliding the object

along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said representation of said function is located at the bottom of said touch sensitive area.

14. (previously presented) The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. – 17. (cancelled)

18. (previously presented) The computer readable medium of claim **1**, characterised in, that said computer program code is adapted to function as a shell upon an operating system.

19. – 47. (cancelled)

48. (previously presented) The computer readable medium of claim **1**, wherein the representation is finger-sized.

49. (previously presented) The computer readable medium of claim **1**, wherein the location where the representation is provided does not provide touch functionality for a different function.

REMARKS

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has canceled claims **15** and **16**. Claims **1** – **14**, **18**, **48** and **49** are presented for examination.

On page 2 of the Office Action, the Examiner has indicated that claims **1** – **14**, **18**, **48** and **49** are allowed.

On page 2 of the Office Action, the Examiner has rejected claims **15** and **16** under 35 U.S.C. 112, second paragraph, as being indefinite. Applicant has cancelled these claims without acquiescence to the Examiner's reasons for rejection, and respectfully submits that rejection of these claims is thus rendered moot.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

If any matters can be resolved by telephone, applicant requests that the Patent and Trademark Office please contact applicant's representative at the telephone number listed below.

Respectfully submitted,
SOQUEL GROUP LLC

Dated: June 9, 2011

-------------------------------------	-------

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/315,250	Applicant(s) GOERTZ, MAGNUS	
	Examiner RYAN PITARO	Art Unit 2171	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 30 June 2010.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-16, 18, 48 and 49 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) 1-14, 18, 48 and 49 is/are allowed.
- 6) Claim(s) 15 and 16 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
 Paper No(s)/Mail Date 12/21/2010.
- 4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date. _____.
- 5) Notice of Informal Patent Application
- 6) Other: _____.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/30/2010 has been entered.

Allowable Subject Matter

Claims 1-14,18,48-49 are allowed.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 15-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

Response to Arguments

Applicant's arguments, filed 6/30/2010, with respect to claims 1-14,18 have been fully considered and are persuasive. The rejections of claims 1-14,18 have been withdrawn.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN PITARO whose telephone number is (571)272-4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chat Do can be reached on 571-272-3721. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

SUMMARY OF INTERVIEW

Sir:

Applicant expresses appreciation to the Examiner for the courtesy of an interview granted to applicant's representative Marc A. Berger (Reg. No. 44,029). The interview was held by telephone on Thursday, May 5, 2011. The substance of the interview is contained in the Interview Summary, Form PTOL-413, prepared and entered by the Examiner on May 11, 2011.

Respectfully submitted,
SOQUEL GROUP LLC

Dated: May 29, 2011

/Marc A. Berger/

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PLUS Search Results for S/N 10315250, Searched Thu May 12 15:25:52 EDT 2011
The Patent Linguistics Utility System (PLUS) is a USPTO automated search system for U.S. Patents from 1971 to the present PLUS is a query-by-example search system which produces a list of patents that are most closely related linguistically to the application searched. This search was prepared by the staff of the Scientific and Technical Information Center, SIRA.

UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE
United States Patent and Trademark Office
Address: COMMISSIONER FOR PATENTS
P.O. Box 1450
Alexandria, Virginia 22313-1450
www.uspto.gov

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO. Includes details for application 10/315,250 and 75660, inventor Magnus Goertz, attorney NEONODE.P004, examiner PITARO, RYAN F, art unit 2171, and mail date 05/11/2011.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Interview Summary	Application No.	Applicant(s)	
	10/315,250	GOERTZ, MAGNUS	
	Examiner	Art Unit	
	RYAN F. PITARO	2171	

All participants (applicant, applicant's representative, PTO personnel):

(1) RYAN F. PITARO. (3)_____.

(2) Marc Berger. (4)_____.

Date of Interview: 05 May 2011.

Type: a) Telephonic b) Video Conference
c) Personal [copy given to: 1) applicant 2) applicant's representative]

Exhibit shown or demonstration conducted: d) Yes e) No.
If Yes, brief description: _____.

Claim(s) discussed: 1.

Identification of prior art discussed: Nakajima, Hoshino, Hirshberg, Carlson, Venolia.

Agreement with respect to the claims f) was reached. g) was not reached. h) N/A.

Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Differences between the prior art of record and the claimed application were discussed in view of the claim amendments. Agreement was reached that the prior art fails to teach the claimed amendments.

(A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.)

THE FORMAL WRITTEN REPLY TO THE LAST OFFICE ACTION MUST INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MPEP Section 713.04). If a reply to the last Office action has already been filed, APPLICANT IS GIVEN A NON-EXTENDABLE PERIOD OF THE LONGER OF ONE MONTH OR THIRTY DAYS FROM THIS INTERVIEW DATE, OR THE MAILING DATE OF THIS INTERVIEW SUMMARY FORM, WHICHEVER IS LATER, TO FILE A STATEMENT OF THE SUBSTANCE OF THE INTERVIEW. See Summary of Record of Interview requirements on reverse side or on attached sheet.

/Ryan F Pitaro/ Primary Examiner, Art Unit 2171	
--	--

Summary of Record of Interview Requirements

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews

Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
(The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

CERTIFICATION STATEMENT

Please see 37 CFR 1.97 and 1.98 to make the appropriate selection(s):

That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(1).

OR

That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in 37 CFR 1.56(c) more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(2).

See attached certification statement.

The fee set forth in 37 CFR 1.17 (p) has been submitted herewith.

A certification statement is not submitted herewith.

SIGNATURE

A signature of the applicant or representative is required in accordance with CFR 1.33, 10.18. Please see CFR 1.4(d) for the form of the signature.

Signature	/Marc A. Berger/	Date (YYYY-MM-DD)	2010-12-21

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Doc description: Request for Continued Examination (RCE)

PTO/SB/30EFS (07-09)

Approved for use through 07/31/2012. OMB 0651-0031

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

**REQUEST FOR CONTINUED EXAMINATION(RCE)TRANSMITTAL
(Submitted Only via EFS-Web)**

Application Number	10315250	Filing Date	2002-12-10	Docket Number (if applicable)	NEONODE.P004	Art Unit	2174
First Named Inventor	Magnus Goertz			Examiner Name	Ryan F. Pitaro		

This is a Request for Continued Examination (RCE) under 37 CFR 1.114 of the above-identified application.
Request for Continued Examination (RCE) practice under 37 CFR 1.114 does not apply to any utility or plant application filed prior to June 8, 1995, or to any design application. The Instruction Sheet for this form is located at WWW.USPTO.GOV

SUBMISSION REQUIRED UNDER 37 CFR 1.114

Note: If the RCE is proper, any previously filed unentered amendments and amendments enclosed with the RCE will be entered in the order in which they were filed unless applicant instructs otherwise. If applicant does not wish to have any previously filed unentered amendment(s) entered, applicant must request non-entry of such amendment(s).

Previously submitted. If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.

Consider the arguments in the Appeal Brief or Reply Brief previously filed on _____

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.111

Sir:

In response to the Final Office Action dated May 28, 2010, applicant respectfully requests that the above-identified application be amended as follows.

IN THE CLAIMS:

Please substitute the following claims for the pending claims with the same number:

1. (currently amended) A non-transitory computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which ~~representations a~~ representation of ~~at least one a~~ function are ~~displayed, and each function of said at least one function being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being~~ is provided, wherein the representation consists of only one option for activating the function and wherein the function is activated by a multi-step operation comprising (i) an object touching the ~~corresponding~~ touch sensitive area at a location where the representation is provided and then (ii) the object gliding along the touch sensitive area away from the touched location.

2. (currently amended) The computer readable medium of claim **1**, wherein ~~one function from~~ the ~~at least one~~ function, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. (previously presented) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a

preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. (currently amended) The computer readable medium of claim **1**, wherein ~~one function from at least one~~ the function, when activated, causes the user interface to display a keyboard and a text field.

5. (previously presented) The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. (currently amended) The computer readable medium of claim **1**, wherein ~~one function from~~ the ~~at least one~~ function, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. (previously presented) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting

files to presenting applications, or from presenting applications to presenting files.

9. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and the user interface enables list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list.

10. (previously presented) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down by one whole page.

11. (previously presented) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position.

12. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is advanced one step by gliding the object along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said ~~representations~~ representation of said ~~at least one~~ function ~~[[are]]~~ is located at the bottom of said touch sensitive area.

14. (previously presented) The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. (previously presented) An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said touch sensitive area.

16. (previously presented) The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. (cancelled)

18. (previously presented) The computer readable medium of claim **1**, characterised in, that said computer program code is adapted to function as a shell upon an operating system.

19. – 47. (cancelled)

Please add the following new claims.

48. (new) The computer readable medium of claim **1**, wherein the representation is finger-sized.

49. (new) The computer readable medium of claim **1**, wherein the location where the representation is provided does not provide touch functionality for a different function.

REMARKS

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has amended claim **1, 2, 4, 6** and **13** and added new claims **48** and **49** to properly claim the present invention. No new matter has been introduced. Support for the new and amended claims is provided hereinbelow. Claims **1 – 16, 18, 48** and **49** are presented for examination.

In Paragraphs 2 and 3 of the Office Action, the Examiner has rejected claim **1** under 35 U.S.C. §103(a) as being unpatentable over Nakajima et al., U.S. Patent No. 6,346,935 ("Nakajima") in view of Hoshino et al., U.S. Publ. No. 2004/0021643 ("Hoshino") in view of Hirshberg, U.S. Publ. No. 2002/0027549 ("Hirshberg").

In Paragraph 4 of the Office Action, the Examiner has rejected claims **2 – 11, 14 – 16** and **18** under 35 U.S.C. §103(a) as being unpatentable over Nakajima and Hoshino in view of Hirshberg in view of Pogue, Palm Pilot: The Ultimate Guide, 2nd Edition ("Pogue").

In Paragraph 5 of the Office Action, the Examiner has rejected claims **12** and **13** under 35 U.S.C. §103(a) as being unpatentable over Nakajima in view of Pogue, in view of Hoshino, in view of Hirshberg, in view of O'Rourke, US Patent No. 7,225,408 ("O'Rourke").

Brief Discussion of Prior Art

Nakajima, Rogue and O'Rourke are discussed in applicant's response filed on July 13, 2009. Hoshino is discussed in applicant's response filed on February 22, 2010.

Hirshberg describes a touch screen user interface for a compact multi-functional keypad that is operated using a finger. Hirshberg addresses the problem of how to provide the 40 – 60 different keys required for a full alphanumeric keypad on a small surface that cannot reasonably accommodate so many keys (Hirschberg/ par. [0050]). Hirshberg describes grouping several characters (typically 4 – 6 characters) in a single key. As such, the number of required keys is reduced, and can fit in the available display area on a handheld device (Hirshberg/ par. [0051]).

To enter a character, a user first touches a key representing several characters, and then drags his finger in a specific direction to select one of the several characters. Thus, at par. [0055], Hirshberg recites:

In multi-function key [sic] the first touch on the key activate [sic] the key and the relative trace ... is selecting the appropriate function among the functions associated with the selected key.

Response to Examiner's Arguments

In rejecting independent claim **1** in Paragraph 3 of the Office Action, the Examiner has cited par. [0031] of Hirshberg as teaching a multi-step operation comprising an object touching a corresponding location and then the object gliding along the touch sensitive area away from the touched location.

Applicant respectfully submits that Hirshberg teaches a touch and glide operation only for keys that comprise several characters.

On the contrary, for single character keys Hirshberg teaches using a conventional touch operation without a glide (Hirshberg/ pars. [0055] and [0074]). Thus, at par. [0055], Hirshberg recites:

In the case of one function a regular touch operation activate [sic] the function.

Further, at par. [0074], Hirshberg recites:

... a single-function mode wherein a single function is elected on contact with a given key, independent of the direction of motion.

In distinction, the claimed invention uses a multi-step touch-and-glide operation for representations that consist of only one option for activating a function.

In order to further distinguish the claimed invention over Hirshberg, applicant has amended claim **1** to include the limitation that the representation of the function consists of only one option for activating the function.

The rejections of the claims **1 – 16** and **18** in paragraphs 2 - 5 of the Office Action will now be dealt with specifically.

As to amended independent claim **1** for a computer readable medium, applicant respectfully submits, as indicated hereinabove, that the limitation in claim **1** of

*“wherein the representation **consists of only one option for activating the function** and wherein the function is activated by **a multi-step operation** comprising (i) an object **touching** the touch sensitive area at a location where the representation is provided and then (ii) the object **gliding along the touch sensitive area away from the touched location**”*

is neither shown nor suggested in Nakajima, Hoshino, Hirshberg, Pogue or O’Rourke.

Because claims **2 – 16, 18, 48** and **49** depend from claim **1** and include additional features, applicant respectfully submits that claims **2 – 16, 18, 48** and **49** are not anticipated or rendered obvious by Nakajima, Hoshino, Hirshberg, Pogue, O'Rourke, or a combination of Nakajima, Hoshino, Hirshberg, Pogue and O'Rourke.

Accordingly claims **1, 2 – 16, 18, 48** and **49** are deemed to be allowable.

Support for New and Amended Claims in Original Specification

Independent claim **1** for a computer readable medium has been amended to include the limitation of a representation consisting of only one option for activating a function. This limitation is supported in the original specification at least by the Abstract, by representations 21 – 23 of FIG. 1, by FIG. 2 and its description at pars. [0045] – [0047] and by par. [0068].

Applicant notes that each representation 21 – 23, shown in FIG. 1 of the original specification, consists of only one option for activating its corresponding function. Indeed, element 21 consists of the one option of displaying icons as appropriate for a currently active application, as described at par. [0048] and shown in FIG. 3 of the original specification. Element 22 consists of the one option of opening a keypad and text window, as described at par. [0052] and shown in FIG. 5 of the original specification. Element 23 consists of the one option of opening a list of computer system applications and files, as described at par. [0058] and shown in FIG. 6 of the original specification. Moreover, each of these one-option elements is activated by a multi-step touch-and-glide operation, as described at pars. [0016] and [0047] of the original specification.

New dependent claim **48** includes the limitation that the representation of the function is finger-sized. This limitation is supported in the original specification at least at par. [0047] and FIG. 2, which shows that a representation 21, 22 or 23 is activated by a user's thumb; and at FIG. 5, which shows that representations 21, 22 and 23 are approximately the same size as the numeral keys of keyboard 221.

New dependent claim **49** includes the limitation that the location where the representation is provided does not provide touch functionality for a different function. This limitation is supported in the original specification at least at FIG. 1, which shows that the locations of the representations 21, 22, 23 are non-overlapping.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

If any matters can be resolved by telephone, applicant requests that the Patent and Trademark Office please contact the applicant at the telephone number listed below.

Respectfully submitted,

Dated: June 30, 2010

Response to Amendment

1. This action is in response to the amendment filed 2/22/2010. This action is final.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al ("Nakajima", 6,346,935) in view of Hoshino et al ("Hoshino", US 20040021643) in view of Hirshberg ("Hirshberg", US 2002/0027549).

As per claim 1, Nakajima teaches a computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising: a touch sensitive area in which representations of a plurality of functions are displayed (Column 15 lines 1-9, *function signs*), and each function of said plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed (Column 15 lines 1-9, *stops moving finger*). Nakajima teaches gliding over the

icon Column 15 lines 1-15, *stops moving finger then glides finger to lightly press surface* but fails to distinctly point out touching the icon and gliding away. However, Hoshino teaches an icon being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location ([0092]-[0093], drag and drop operation may be used in combination with a push in operation for activating a function). Therefore it would have been obvious at the time of the invention to combine the teaching of Hoshino with the medium of Nakajima. Motivation to do so would have been to apply a known technique to a known system in order to yield advantageous and predictable results.

Nakajima-Hoshino fails to distinctly point out an object touching a location then the object gliding along the area away from the location to activate a function. However, Hirshberg teaches a multi-step operation comprising an object touching the corresponding location and then the object gliding along the touch sensitive area away from the touched location ([0031]).

Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Hirshberg with the medium of Nakajima-Hoshino.

Motivation to do so would have been to provide a compact multifunctional keypad which would not require great precision of use and which could be conveniently and effectively operated by use of the finger.

4. Claims 2-11,14-16,18 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al (“Nakajima”, 6,346,935) and Hoshino et al (“Hoshino”, US 20040021643) in view of Hirshberg (“Hirshberg”, US 2002/0027549) in view of Rogue (“Rogue”, Palm Pilot: The Ultimate Guide, 2nd Edition).

As per claim 2, Nakajima-Hoshino-Hirshberg fails to particularly disclose a function to display a plurality of functions. However, Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display icons representing different services or settings for a currently active application (Figure 1.2-1.3, *Preferences*).Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Rogue with the medium of Nakajima. Motivation to do so would have been to provide a way to reduce screen clutter and only access the applications when needed.

As per claim 3, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 2, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting (Nakajima, Column 18 lines 30-40, tap).

As per claim 4, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display a keyboard and a text field (Rogue, Figure 2.5, power stroke up, Figure 2.6).

As per claim 5, Nakajima-Hoshino-Hirshberg-Rogue teaches a wherein said text field is used for inputting and editing of text through said keyboard (Nakajima, Figure 2.6).

As per claim 6, Nakajima-Hoshino-Hirshberg-Rogue fails to teach a computer readable medium of claim 1, OFFICIAL NOTICE is taken that file listing is well know in the art. It is extremely common to see a list of functions and files listed, as in directories. Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching with the medium of Nakajima-Hoshino -Rogue. Motivation to do so would have been to provide a user with a list of options.

As per claim 7, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 6, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted,

raising said object from said touch sensitive area, and then tapping on said touch sensitive area (Nakajima, Column 18 lines 40-56).

As per claim 8, Nakajima-Hoshino-Hirshberg-Rogue fails to teach presenting only files or only applications. However OFFICIAL NOTICE is taken that file sorting is well known in the art. It is extremely common to sort a list of functions and files listed by data type. Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a user with a specific list of filtered options.

As per claim 9, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 7, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, causes said marking to move in the same direction without scrolling the list (Rogue, Figure 1.4, using the menu).

As per claim 10, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 9, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom position of said touch

sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down one whole page (Nakajima, Column 14 lines 45-57 and Column 2 lines 15-23, wherein Nakajima is an absolute pointing device and a swipe from the top of the page to the bottom will result in a refresh by a whole page).

As per claim 11, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 10, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said navigation can be continued from said second position (Nakajima, Column 14 lines 45-57).

As per claim 14, while Nakajima-Hoshino-Hirshberg-Rogue fails to teach a touch sensitive area is 2-3 inches. OFFICIAL NOTICE is taken that screen sizes vary and screens with a touch sensitive area of 2-3 inches diagonally is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the screen size with the medium of Nakajima-Hoshino -Rogue. Motivation to do so would have been to provide adequate size to operate the touch screen while keeping it small enough to fit in a pocket.

As per claim 15, Nakajima-Hoshino-Hirshberg-Rogue teaches a enclosure adapted to cover the mobile handheld computer unit according to Claim 1, characterised in, that said enclosure is provided with an opening for said touch sensitive area (Rogue, Figure 1.1).

As per claim 16, Nakajima-Hoshino-Hirshberg-Rogue fails to teach an enclosure is removable and exchangeable. OFFICIAL NOTICE is taken that an enclosure is removable and exchangeable is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the exchangeable enclosure with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a way to style your mobile device so that it can be personalized to a user's taste.

As per claim 18, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium according to Claim 1, characterised in, that said computer program product is adapted to function as a shell upon an operations system (Rogue, 1.1 Palm Pilot Basics).

5. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al (“Nakajima”, 6,346,935) in view of Rogue (“Rogue”, Palm Pilot: The Ultimate Guide, 2nd Edition), Hoshino et al (“Hoshino”, US 20040021643) and Hirshberg (“Hirshberg”, US 2002/0027549) in view of O’Rourke (O’Rourke, US 7,225,408).

As per claim 12, Nakajima-Hoshino-Hirshberg-Rogue teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that an active application, function, service or setting is moved on one step by gliding the object along the touch sensitive area from left to right (Nakajima, Column 14 lines 45-57). However, Nakajima-Hoshino-Hirshberg-Rogue t fails to distinctly point out closing or backing one step. However, O’Rourke teaches that the active application, function, service or setting is closed or backed one step (Figure 13, right and left arrows). Therefore it would have been obvious to an artisan at the time of the invention to combine the glide functionality with the forward and backward functionality of O’Rourke. Motivation to do so would have been to provide an easy way to traverse the GUI.

As per claim 13, Nakajima-Hoshino-Hirshberg-Rogue t-O'Rourke teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that said representations of said plurality of functions are located at the bottom of said touch sensitive area (O'Rourke, Figure 13, icons at bottom right) .

Response to Arguments

Applicant's arguments with respect to claims 1-16,18 have been considered but are moot in view of the new ground(s) of rejection.

The Examiner notes that the factual assertions set forth under OFFICIAL NOTICE in the previous office action have not been contested.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN F. PITARO whose telephone number is (571)272-4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dennis Chow can be reached on 571-272-7767. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.111

Sir:

In response to the Office Action dated November 24, 2009, applicant respectfully requests that the remarks below be taken into consideration.

IN THE CLAIMS:

Please substitute the following claims for the pending claims with the same number:

1. (currently amended) A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which representations of at least one function are displayed, and each function of said at least one function being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by a multi-step operation comprising (i) an object touching the corresponding location and then (ii) the object gliding along the touch sensitive area away from the touched location.

2. (previously presented) The computer readable medium of claim **1**, wherein one function from the at least one function, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. (previously presented) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. (previously presented) The computer readable medium of claim **1**, wherein one function from at least one function, when activated, causes the user interface to display a keyboard and a text field.

5. (previously presented) The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. (previously presented) The computer readable medium of claim **1**, wherein one function from the at least one function, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. (previously presented) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files.

9. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and the user interface enables list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list.

10. (previously presented) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down by one whole page.

11. (previously presented) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position.

12. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is advanced one step by gliding the object

along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said representations of said at least one function are located at the bottom of said touch sensitive area.

14. (previously presented) The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. (previously presented) An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said touch sensitive area.

16. (previously presented) The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. (cancelled)

18. (previously presented) The computer readable medium of claim **1**, characterised in, that said computer program code is adapted to function as a shell upon an operating system.

19. – 47. (cancelled)

REMARKS

Applicant expresses appreciation to the Examiner for the courtesy of an interview granted to applicant's representative Marc A. Berger (Reg. No. 44,029) and to Yossi Shain. The interview was held by telephone on Monday, February 22, 2010. The substance of the interview concerned the amendments to claim **1**.

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has amended claim **1** to properly claim the present invention. No new matter has been introduced. Claims **1 - 16** and **18** are presented for examination.

In Paragraphs 2 and 3 of the Office Action, the Examiner has rejected claim **1** under 35 U.S.C. §103(a) as being unpatentable over Nakajima et al., U.S. Patent No. 6,346,935 ("Nakajima") in view of Hoshino et al., U.S. Publ. No. 2004/0021643 ("Hoshino").

In Paragraph 4 of the Office Action, the Examiner has rejected claims **2 - 11, 14 - 16** and **18** under 35 U.S.C. §103(a) as being unpatentable over Nakajima in view of Hoshino, and in view of Rogue, Palm Pilot: The Ultimate Guide, 2nd Edition ("Rogue").

In Paragraph 5 of the Office Action, the Examiner has rejected claims **12** and **13** under 35 U.S.C. §103(a) as being unpatentable over Nakajima in view of Rogue, in view of Hoshino, and in view of O'Rourke, US Patent No. 7,225,408 ("O'Rourke").

Brief Discussion of Prior Art

Nakajima, Rogue and O'Rourke are discussed in applicant's response filed on July 13, 2009.

Hoshino describes a touch screen user interface with two distinct user operations; namely, (1) touch, and (2) drag. Since a drag operation begins with an initial touch, in order to distinguish between these operations (1) and (2), it is necessary to discriminate between a touch operation and the initial touch of a drag operation. To do so, Hoshino uses a pressure sensor, in addition to a touch sensor. The pressure sensor discriminates between three states; namely, (a) no touch, (b) a light touch, and (c) a hard touch, corresponding to respective pressure levels 0, P1 and P2 (Hoshino/ pars. 10, 57, 79 – 81, 91 and 92; step 103 of FIG. 7, step 205 of FIG. 12, step 305 of FIG. 15, step 406 of FIG. 18 and step 506 of FIG. 21).

Hoshino associates a drag operation with a soft initial touch, and associates a touch operation with a hard touch. Hoshino is thereby able to discriminate between a touch operation and the initial touch of a drag operation. Hoshino activates a function in response to a hard touch, but does not activate a function in response to a soft touch.

Response to Examiner's Arguments

In rejecting independent claim **1** in Paragraph 3 of the Office Action, the Examiner has cited pars. 92 and 93 of Hoshino as teaching a function being activated in response to an object touching a corresponding location and then gliding along the touch sensitive area away from the location. Applicant respectfully submits that, unlike the claimed invention, Hoshino activates the function solely in response to a

push-in operation; i.e., a hard touch, and not in response to a drag operation. Indeed, at par. 92 Hoshino recites

When $P \geq P2$, an operation for activating the function may be performed in a manner similar to steps 104 – 107 in FIG. 7.

Applicant notes that in FIG. 7, from step 100 (START) through step 107, function activation occurs solely in response to a hard touch on an associated icon, irrespective of whether or not a drag is performed.

In distinction, the claimed invention activates a function in response to a multi-step touch-and-glide operation. Thus in particular, referring to the illustration below, the claimed invention responds to a (hard) touch followed by a glide differently than Hoshino. Specifically, the claimed invention activates a function after the glide, whereas Hoshino activates the function after the (hard) touch.

Function activation operation of claimed invention vs. that of Hoshino

The table below summarizes some of the salient distinctions between the claimed invention and Hoshino.

Some distinctions between claimed invention and Hoshino		
	Claimed invention	Hoshino
Objective	Novel touch-and-glide user interface operation	Discriminate between two conventional operations; namely, (1) touch, and (2) drag-and-drop
Hardware	Touch screen	Touch screen with pressure sensor
Function Activation	In response to both steps of a multi-step operation; namely, (1) touch, followed by (2) a glide	In response to hard touch

In order to further distinguish the claimed invention over the prior art, applicant has amended claim **1** to include the limitation of a multi-step operation comprising (1) a touch, followed by (2) a glide away from the touched position.

The rejections of the claims **1** – **16** and **18** in paragraphs 2 - 5 of the Office Action will now be dealt with specifically.

As to amended independent claim **1** for a computer readable medium, applicant respectfully submits, as indicated hereinabove, that the limitation in claim **1** of

“each function ... being activated by a multi-step operation comprising (i) an object touching the corresponding location and then (ii) the object gliding along the touch sensitive area away from the touched location”

is neither shown nor suggested in Nakajima, Hoshino, Rogue or O’Rourke.

In Paragraph 3 of the Office Action, the Examiner has indicated that it would have been obvious to combine the teaching of Hoshino with the medium of Nakajima. Applicant respectfully disagrees. Hoshino does not teach gliding a finger away from an icon. Instead, Hoshino teaches a drag-and-drop operation for moving an icon. In Nakajima the icons are either carve-outs in a frame surrounding a touch pad, or icons on an overlay of the touch pad. It is not possible to move the icons of Nakajima. As such, even the combination of Hoshino and Nakajima does not suggest the touch-and-glide operation of the claimed invention.

Moreover, for the sake of argument, even if one were somehow able to introduce the drag operation of Hoshino into Nakajima, the lack of a pressure sensor in Nakajima would cause Nakajima to activate a function upon the initial touch of the drag, and ignore the drag

altogether. In fact Hoshino, at pars. 7 – 9, teaches away from trying to support a drag-and-drop operation on a touch screen that does not have a pressure sensor.

The table below summarizes reasons why it is non-obvious to combine Nakajima and Hoshino.

Some reasons why it is non-obvious to combine Nakajima with Hoshino	
Nakajima	Hoshino
Touch sensitive surface is opaque and static	Requires dynamic video display to animate drag-and-drop of icons
Icon is stationary (carve-out in frame surrounding screen, or on overlay sheet)	Requires software generated icon
Touch screen does not have pressure sensor	Requires pressure sensor.

Because claims **2 – 16** and **18** depend from claim **1** and include additional features, applicant respectfully submits that claims **2 – 16** and **18** are not anticipated or rendered obvious by Nakajima, Hoshino, Rogue, O'Rourke, or a combination of Nakajima, Hoshino, Rogue and O'Rourke.

Accordingly claims **1 – 16** and **18** are deemed to be allowable.

Support for Amended Claims in Original Specification

Independent claim **1** for a computer readable medium has been amended to include the limitation of a multi-step operation comprising (1) a touch, followed by (2) a glide. This limitation is supported in the original specification at least by the Abstract, by FIG. 2, where the arrow at A indicates a touch and the arrow at B indicates a glide, and by the description thereof at par. 47.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

If any matters can be resolved by telephone, applicant requests that the Patent and Trademark Office please contact the applicant at the telephone number listed below.

Respectfully submitted,

Dated: February 22, 2010

/Marc A. Berger/

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Office Action Summary	Application No. 10/315,250	Applicant(s) GOERTZ, MAGNUS	
	Examiner RYAN F. PITARO	Art Unit 2174	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 13 July 2009.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-16 and 18 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-16, 18 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

Response to Amendment

1. This action is in response to the amendment filed 7/13/2009. This action is non-final.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al ("Nakajima", 6,346,935) in view of Hoshino et al ("Hoshino", US 20040021643).

As per claim 1, Nakajima teaches a computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising: a touch sensitive area in which representations of a plurality of functions are displayed (Column 15 lines 1-9, *function signs*), and each function of said plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed (Column 15 lines 1-9, *stops moving finger*). Nakajima teaches gliding over the

icon Column 15 lines 1-15, *stops moving finger then glides finger to lightly press surface* but fails to distinctly point out touching the icon and gliding away. However, Hoshino teaches an icon being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location ([0092]-[0093], drag and drop operation may be used in combination with a push in operation for activating a function). Therefore it would have been obvious at the time of the invention to combine the teaching of Hoshino with the medium of Nakajima. Motivation to do so would have been to apply a known technique to a known system in order to yield advantageous and predictable results.

4. Claims 2-11,14-16,18 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al ("Nakajima", 6,346,935) and Hoshino et al ("Hoshino", US 20040021643) in view of Rogue ("Rogue", Palm Pilot: The Ultimate Guide, 2nd Edition).

As per claim 2, Nakajima-Hoshino fails to particularly disclose a function to display a plurality of functions. However, Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display icons representing different services or settings for a currently active application (Figure 1.2-1.3, *Preferences*).Therefore it would have been

obvious to an artisan at the time of the invention to combine the teaching of Rogue with the medium of Nakajima. Motivation to do so would have been to provide a way to reduce screen clutter and only access the applications when needed.

As per claim 3, Nakajima-Hoshino-Rogue teaches a computer readable medium of claim 2, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting (Nakajima, Column 18 lines 30-40, tap).

As per claim 4, Nakajima-Hoshino-Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when_activated, causes the user interface to display a keyboard and a text field (Rogue, Figure 2.5, power stroke up, Figure 2.6).

As per claim 5, Nakajima-Hoshino-Rogue teaches a wherein said text field is used for inputting and editing of text through said keyboard (Nakajima, Figure 2.6).

As per claim 6, Nakajima-Hoshino-Rogue fails to teach a computer readable medium of claim 1, OFFICIAL NOTICE is taken that file listing is well know in the art. It is extremely common to see a list of functions and files listed, as in directories. Therefore it would have been obvious to an artisan at the time of the invention to

combine the teaching with the medium of Nakajima-Hoshino -Rogue. Motivation to do so would have been to provide a user with a list of options.

As per claim 7, Nakajima-Hoshino -Rogue teaches a computer readable medium of claim 6, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area (Nakajima, Column 18 lines 40-56).

As per claim 8, Nakajima-Hoshino -Rogue fails to teach presenting only files or only applications. However OFFICIAL NOTICE is taken that file sorting is well know in the art. It is extremely common to sort a list of functions and files listed by data type. Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a user with a specific list of filtered options.

As per claim 9, Nakajima-Hoshino -Rogue teaches a computer readable medium of claim 7, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, causes

said marking to move in the same direction without scrolling the list (Rogue, Figure 1.4, using the menu).

As per claim 10, Nakajima-Hoshino -Rogue teaches a computer readable medium of claim 9, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom position of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down one whole page (Nakajima, Column 14 lines 45-57 and Column 2 lines 15-23, wherein Nakajima is an absolute pointing device and a swipe from the top of the page to the bottom will result in a refresh by a whole page).

As per claim 11, Nakajima-Hoshino -Rogue teaches a computer readable medium of claim 10, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said navigation can be continued from said second position (Nakajima, Column 14 lines 45-57).

As per claim 14, while Nakajima-Hoshino -Rogue fails to teach a touch sensitive area is 2-3 inches. OFFICIAL NOTICE is taken that screen sizes vary and screens with a touch sensitive area of 2-3 inches diagonally is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the screen size with the medium of Nakajima-Hoshino -Rogue. Motivation to do so would have been to provide adequate size to operate the touch screen while keeping it small enough to fit in a pocket.

As per claim 15, Nakajima-Hoshino-Rogue teaches a enclosure adapted to cover the mobile handheld computer unit according to Claim 1, characterised in, that said enclosure is provided with an opening for said touch sensitive area (Rogue, Figure 1.1).

As per claim 16, Nakajima-Hoshino-Rogue fails to teach an enclosure is removable and exchangeable. OFFICIAL NOTICE is taken that an enclosure is removable and exchangeable is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the exchangeable enclosure with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a way to style your mobile device so that it can be personalized to a user's taste.

As per claim 18, Nakajima-Hoshino-Rogue teaches a computer readable medium according to Claim 1, characterised in, that said computer program product is adapted to function as a shell upon an operations system (Rogue, 1.1 Palm Pilot Basics).

5. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al ("Nakajima", 6,346,935) in view of Rogue ("Rogue", Palm Pilot: The Ultimate Guide, 2nd Edition) and Hoshino et al ("Hoshino", US 20040021643) in view of O'Rourke (O'Rourke, US 7,225,408).

As per claim 12, Nakajima-Hoshino-Rogue teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that an active application, function, service or setting is moved on one step by gliding the object along the touch sensitive area from left to right (Nakajima, Column 14 lines 45-57). However, Nakajima-

Rogue fails to distinctly point out closing or backing one step. However, O'Rourke teaches that the active application, function, service or setting is closed or backed one step (Figure 13, right and left arrows). Therefore it would have been obvious to an artisan at the time of the invention to combine the glide functionality with the forward and backward functionality of O'Rourke. Motivation to do so would have been to provide an easy way to traverse the GUI.

As per claim 13, Nakajima-Hoshino-Rogue-O'Rourke teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that said representations of said plurality of functions are located at the bottom of said touch sensitive area (O'Rourke, Figure 13, icons at bottom right) .

Response to Arguments

Applicant's arguments with respect to claims 1-16,18 have been considered but are moot in view of the new ground(s) of rejection.

The Examiner notes that the OFFICIAL NOTICE set forth in the previous office action has not been contested.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN F. PITARO whose telephone number is (571)272-4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dennis Chow can be reached on 571-272-7767. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.111

Sir:

In response to the Office Action dated July 8, 2009, applicant respectfully requests that the remarks below be taken into consideration.

IN THE CLAIMS:

Please substitute the following claims for the pending claims with the same number:

1. (previously presented) A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which representations of at least one function are displayed, and each function of said at least one function being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the touched location.

2. (previously presented) The computer readable medium of claim **1**, wherein one function from the at least one function, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. (previously presented) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. (previously presented) The computer readable medium of claim **1**, wherein one function from at least one function, when activated, causes the user interface to display a keyboard and a text field.

5. (previously presented) The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. (previously presented) The computer readable medium of claim **1**, wherein one function from the at least one function, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. (previously presented) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files.

9. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and the user interface enables list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list.

10. (previously presented) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down by one whole page.

11. (previously presented) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position.

12. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is advanced one step by gliding the object

along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. (previously presented) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said representations of said at least one function are located at the bottom of said touch sensitive area.

14. (previously presented) The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. (previously presented) An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said touch sensitive area.

16. (previously presented) The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. (cancelled)

18. (previously presented) The computer readable medium of claim **1**, characterised in, that said computer program code is adapted to function as a shell upon an operating system.

19. – 47. (cancelled)

REMARKS

Applicant expresses appreciation to the Examiner for the courtesy of an interview granted to applicant's representative Marc A. Berger (Reg. No. 44,029). The interview was held by telephone on Monday, July 13, 2009.

As discussed during the interview, applicant wishes to point out that the signs **19a**, etc. of **FIG. 5** of Nakajima are not on the touch surface. They are merely signs, outside of the touch surface **7B**, that indicate the functions assigned to adjacent regions of the touch surface.

As such, applicant respectfully submits that the present claim language "at least one function being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the touched location" is not anticipated by Nakajima.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

Respectfully submitted,

Dated: July 13, 2009

/Marc A. Berger/

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Response to Amendment

1. This action is in response to the amendment filed 4/22/2009. This action is non-final.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Nakajima et al (“Nakajima”, 6,346,935).

As per claim 1, Nakajima teaches a computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising: a touch sensitive area in which

representations of a plurality of functions are displayed (Column 15 lines 1-9, *function signs*), and each function of said plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed (Column 15 lines 1-9, *stops moving finger*), and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location (Column 15 lines 1-15, *stops moving finger then glides finger to lightly press surface*).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-11,14-16,18 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al (“Nakajima”, 6,346,935) in view of Rogue (“Rogue”, Palm Pilot: The Ultimate Guide, 2nd Edition).

As per claim 2, Nakajima fails to particularly disclose a function to display a plurality of functions. However, Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display icons representing different services or settings for a currently active application (Figure 1.2-1.3, *Preferences*). Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Rogue with the medium of Nakajima. Motivation to do so would have been to provide a way to reduce screen clutter and only access the applications when needed.

As per claim 3, Nakajima-Rogue teaches a computer readable medium of claim 2, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting (Nakajima, Column 18 lines 30-40, tap).

As per claim 4, Nakajima-Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when_activated, causes the user interface to display a keyboard and a text field (Figure 2.5, power stroke up, Figure 2.6).

As per claim 5, Nakajima-Rogue teaches a wherein said text field is used for inputting and editing of text through said keyboard (Nakajima, Figure 2.6).

As per claim 6, Nakajima-Rogue fails to teach a computer readable medium of claim 1, OFFICIAL NOTICE is taken that file listing is well know in the art. It is extremely common to see a list of functions and files listed, as in directories. Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a user with a list of options.

As per claim 7, Nakajima-Rogue teaches a computer readable medium of claim 6, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area (Nakajima, Column 18 lines 40-56).

As per claim 8, Nakajima-Rogue fails to teache presenting only files or only applications. However OFFICIAL NOTICE is taken that file sorting is well know in the art. It is extremely common to sort a list of functions and files listed by data type. Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a user with a specific list of filtered options.

As per claim 9, Nakajima-Rogue teaches a computer readable medium of claim 7, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, causes said marking to move in the same direction without scrolling the list (Rogue, Figure 1.4, using the menu).

As per claim 10, Nakajima-Rogue teaches a computer readable medium of claim 9, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom position of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down one whole page (Nakajima, Column 14 lines 45-57 and Column 2 lines 15-23, wherein Nakajima is an absolute pointing device and a swipe from the top of the page to the bottom will result in a refresh by a whole page).

As per claim 11, Nakajima-Rogue teaches a computer readable medium of claim 10, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on

said touch sensitive area, said navigation can be continued from said second position (Nakajima, Column 14 lines 45-57).

As per claim 14, while Nakajima-Rogue-O'Rourke fails to teach a touch sensitive area is 2-3 inches. OFFICIAL NOTICE is taken that screen sizes vary and screens with a touch sensitive area of 2-3 inches diagonally is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the screen size with the medium of Nakajima-Rogue. Motivation to do so would have been to provide adequate size to operate the touch screen while keeping it small enough to fit in a pocket.

As per claim 15, Nakajima-Rogue teaches a enclosure adapted to cover the mobile handheld computer unit according to Claim 1, characterised in, that said enclosure is provided with an opening for said touch sensitive area (Rogue, Figure 1.1).

As per claim 16, Nakajima-Rogue fails to teach an enclosure is removable and exchangeable. OFFICIAL NOTICE is taken that an enclosure is removable and exchangeable is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the exchangeable enclosure with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a way to style your mobile device so that it can be personalized to a user's taste.

As per claim 18, Nakajima-Rogue teaches a computer readable medium according to Claim 1, characterised in, that said computer program product is adapted to function as a shell upon an operations system (Rogue, 1.1 Palm Pilot Basics).

6. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al (“Nakajima”, 6,346,935) in view of Rogue (“Rogue”, Palm Pilot: The Ultimate Guide, 2nd Edition) in view of O’Rourke (O’Rourke, US 7,225,408).

As per claim 12, Nakajima-Rogue teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that an active application, function, service or setting is moved on one step by gliding the object along the touch sensitive area from left to right (Nakajima, Column 14 lines 45-57). However, Nakajima-Rogue

fails to distinctly point out closing or backing one step. However, O'Rourke teaches that the active application, function, service or setting is closed or backed one step (Figure 13, right and left arrows). Therefore it would have been obvious to an artisan at the time of the invention to combine the glide functionality with the forward and backward functionality of O'Rourke. Motivation to do so would have been to provide an easy way to traverse the GUI.

As per claim 13, Nakajima-Rogue-O'Rourke teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that said representations of said plurality of functions are located at the bottom of said touch sensitive area (O'Rourke, Figure 13, icons at bottom right) .

Response to Arguments

Applicant's arguments filed 4/22/2009 have been fully considered but they are not persuasive.

The Applicant argues the following main points with regards to claim 1. As summarized by the table on page 10 of the amendment, Nakamura differs for the following reasons:

- Glide is over non-touch sensitive portion of screen
- Glide is followed by touch
- Glide is toward touch point
- Glide is along periphery of touch sensitive area
- Glide movement is guided by inner periphery of raised frame
- Only the touch point is process by the user interface
- Frame-guided touch has the same effect as touch alone

The Examiner disagrees; the Applicant has mis-categorized the inner periphery of the frame of Nakajima. The purpose of the frame is to allow the user to more easily glide the finger along the edge of the frame if desired. However, this does not limit the users of Nakajima to only use the edge of the frame as argued by the applicant. The frame of a usual touch tablet interferes with the movement of the user's finger, in other words the effective operational area (the touchable area) of the touch tablet is limited and produces waste of the operational area. So while the Applicant has stated that the glide is over a non-touch sensitive portion of the screen, this is in fact incorrect. The glide can now start at the absolute edge of the screen since there is no frame to restrict the user from the edges of the absolute pointing device. The glide as pointed out in the office action is indeed a touch and glide action (Column 15 lines 1-9), *the users then stops on the sign (icon) of a desired function and the glides the finger.*

This two step action is indicative of both the touch and glide being processed to execute the desired function. Whether or not the frame guided touch has a similar effect as touch alone is erroneous. Like the current application Nakajima eliminates the accidental touch performing a function, hence the reason for the touch then glide. While the two means may produced similar ends each has their advantages and cannot be combined as one.

The Examiner notes that the OFFICIAL NOTICE set forth in the previous office action has not been contested.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN F. PITARO whose telephone number is (571)272-4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dennis Chow can be reached on 571-272-7767. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

CERTIFICATION STATEMENT

Please see 37 CFR 1.97 and 1.98 to make the appropriate selection(s):

That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(1).

OR

That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in 37 CFR 1.56(c) more than three months prior to the filing of the information disclosure statement. See 37 CFR 1.97(e)(2).

See attached certification statement.

Fee set forth in 37 CFR 1.17 (p) has been submitted herewith.

None

SIGNATURE

A signature of the applicant or representative is required in accordance with CFR 1.33, 10.18. Please see CFR 1.4(d) for the form of the signature.

Signature	/Marc A. Berger/	Date (YYYY-MM-DD)	2009-05-04
Name/Print	Marc A. Berger	Registration Number	44029

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. **DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Note: Within nine months from the publication of the mention of the grant of the European patent, any person may give notice to the European Patent Office of opposition to the European patent granted. Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid (Art. 99(1) European patent convention).

Description

The invention relates to a touch panel control device for acoustic equipment.

Acoustic entertainment devices for vehicles, such as a cassette tape player, compact disk player and
 5 radio tuner are installed in considerably small space such as an in-dash console, and therefore must be
 small in size. Accordingly, the switches or push-buttons of the acoustic devices must also be small. These
 small switches or push-buttons are difficult to operate. Furthermore, the acoustic devices are used in
 different modes and operated in various manners. Therefore they employ a variety of switches, push-
 buttons, etc. Since the operator cannot easily locate them while driving, his attention to the road may be
 10 distracted when operating the acoustic devices causing a dangerous condition.

In this connection, a method has been disclosed in unexamined published Japanese Patent Application
 no. JP-A-61089720 in which, instead of switches or push-buttons for operating acoustic devices, there is
 provided a touch panel, the different controls of the devices being effected by touching different positions
 on the touch panel.

15 The conventional touch panel method will be described with reference to Figure 1. A touch panel 80
 having interior detecting electrodes is scanned with a scanner 20 to detect when and at what point the
 touch panel 80 has been touched. The detection output data of the scanner 20 is applied to a first memory
 30, where the detection output data of a scan is temporarily stored. The detection output data of one scan
 read out of the first memory 30 is supplied to a recognizing block 40. A touch on the touch panel is pattern-
 20 recognized by the recognizing block 40 for each scan of the scanner 20.

The output pattern data of the recognizing block 40 is applied to a second memory 50 and a data
 comparator 60. The second memory 50 temporarily stores the recognized pattern data produced during one
 scan and supplied thereto from the recognizing block 40. The data comparator 60 compares the output
 pattern data of the recognising block with the pattern data of the preceding scan read out of the second
 25 memory 50, to thereby detect any change in the pattern data. The comparison output data of the data
 comparator 60 is supplied to a decision block 70 which outputs control data corresponding to the
 comparison output data. In response to the comparison output data, the decision block 70 refers to a data
 table (not shown) and outputs predetermined control data according to the touch on the touch panel 80. A
 similar system is shown and described in WO-A-8505477 and the present invention is characterised
 30 thereover.

As is apparent from the above description, in the conventional touch panel control device, the touch
 data of the present scan is merely compared with that of the preceding scan. Therefore, if the scanning
 speed is increased, the control device may judge no change in the touch position between two successive
 scans because the distance the finger can move over a scanning period is related to the scanning speed. If,
 35 on the other hand, the scanning speed is decreased, the following error may be encountered. If a finger
 finely touches and is removed from the panel and the part of the panel touched has not yet been scanned
 (for instance the right part of the panel in the case of scanning the panel in the left-to-right direction), then
 that touch on the panel may not be detected.

Preferably, the entire panel surface should be scanned in about 10ms to prevent a detection miss.
 40 However, if the scanning speed is set to about 10ms, there may be an erroneous detection because, as
 mentioned above, finger speed cannot follow a rapid scanning speed.

Accordingly, an object of this invention is to eliminate the above-described difficulties with a conven-
 tional touch panel control device.

According to the invention there is provided a touch panel control device for outputting commands,
 45 according to how a finger touches a touch panel, the device comprising

touch position detecting means in a matrix form on said touch panel, for detecting a touch on the touch
 panel and providing output signals;

means for detecting the co-ordinates of the touch position from the said output signals of the said touch
 position detecting means and providing an output representative thereof;

50 scanning means for periodically providing a scanning signal to the touch position detecting means to
 enable touch detection;

duration timer means for providing a time measurement signal on receipt of a trigger signal from the
 touch position detecting means;

60 co-ordinate memory means for storing the co-ordinates of a current touch position on the touch panel
 detected by the co-ordinate detecting means;

co-ordinate comparing means for comparing, for each scan, the coordinates of the previously stored
 current touch position in the memory means with those of current touch position;

characterised by

an operation discriminator for determining, according to the relationship between the timer measurement signals received from the timer means and the results of the comparison from the co-ordinate comparing means, which of a plurality of predetermined outputs to issue, whereby, by the user touching and/or moving a finger across the touch panel, an operational mode for an electronic device can be commanded, said operation discriminator including means for determining which output to issue from a plurality of predetermined outputs based upon the direction and distance the finger moves in a predetermined period of time and means for determining which output to issue from the said plurality of predetermined outputs based on the time duration that the finger touches the touch panel while moving less than a predetermined distance.

In the drawings:-

Fig. 1 is a block diagram showing a conventional touch panel control device;

Fig. 2 is a front view showing a touch panel in a touch panel control device according to the invention;

Fig. 3 is a block diagram showing the touch panel control device according to the invention;

Fig. 4 is a circuit diagram of one example of a touch position detecting means in the touch panel control device of the invention.

Fig. 5 is a timing chart for a description of the operation of the touch position detecting means shown in Fig. 4;

Figs. 6, 7 and 8 are three parts of a flow chart for describing the operation of the touch panel control device of the invention; and

Figs. 9(a) and 9(b) are illustrations of displays on the touch panel.

In Fig. 2, reference numeral 1 designates a touch panel. Along the four sides of the touch panel are LEDs (light emitting diodes) 101 through 114 and light receiving means, namely, photo-transistors 201 through 214. They are alternately arranged in such a manner that the photo-transistors 201 through 214 receive light beams from the LEDs 101 through 114, respectively. The photo-transistors 201 through 214 provide high level (H) outputs upon reception of the light beams. The LEDs and the photo-transistors are alternately arranged along the side of the touch panel to eliminate the possibility that a photo-transistor might erroneously detect the light beam emitted by an adjacent LED rather than its corresponding LED.

The control system (Fig. 3) includes a touch operation discriminator 2. The discriminator 2 determines which finger movement is being performed by determining the direction of finger movement (ie. operation by the user) and the time period over which the finger touches the touch panel. A respective operation output is applied to a command discriminator 12. The command discriminator 12 supplies an operation command to a system controller 13 in response to the operation discriminated by the operation discriminator 2. The operation command controls the operation of an electronic device such as a cassette player, radio tuner, or compact disk player, and data representing the operating condition thereof is fed back to the command discriminator 12.

The operation discriminator 2 also applies a scanning pulse signal (STB signal) to a timing circuit 3 with a period of about 10ms as shown in the timing chart of Fig. 5. The scanning time is not necessarily 10ms. It should be determined on the basis of the speed of the finger scanning the panel. During the generation of the STB signal, the timing circuit 3 produces pulses for activating the LEDs 101 through 114 in Fig. 2 so that turn-on input voltages are successively applied to the input terminals 301 through 314 of the LEDs 101 through 114. The light from the LEDs 101 through 114 is applied to the photo-transistors 201 through 214, respectively, the outputs of which are provided at an output terminal 400 in Fig. 4. The timing of these serial outputs is as indicated in Fig. 5. The serial outputs are applied to a serial-to-parallel converter 4, where they are converted into parallel outputs, which are latched by a data latch 5. One scanning operation is completed when the timing circuit 3 has applied the input voltages to all the LEDs. During a waiting time T, the data latched by the data latch 5 is transferred to the operation discriminator 2.

The timing chart of Fig. 5 represents the case where the finger touches the touch panel at a point marked with a circle in Fig. 2. In this case, the outputs of the LEDs 106 and 111 are blocked and therefore the outputs of photo-transistors 206 and 211 are maintained at a low level (L). Therefore, the data latched by the data latch circuit 5 is:

1 1 1 1 1 0 1 1 in the X-direction

1 1 0 1 1 1 1 in the Y direction

As apparent from the above, the coordinates of the touch position can be detected from the position of the "0" levels in the data latch.

During the waiting time T, the output of the data latch circuit 5 are simultaneously applied to a NOR gate 8, the output of which is raised to H when the finger touches the panel.

With further reference to Fig. 3, there is shown a coordinate memory 6 for storing the coordinates of a touch position at the start of a touch detecting operation or at the end of an operation (ie. it retains the touch

position until the next operation); and a timer 7 which is reset in synchronism with the storing operation of the coordinate memory 6, to start its time counting operation. The control system further comprises an arithmetic circuit (not shown) for comparing the coordinates of the present touch position with those stored in the coordinate memory 6, to detect the direction of movement of the finger on the panel 1; a touch memory 10 for storing the touch and non-touch on the touch panel 1; and a command memory 11 for storing the user operation determining output which is discriminated by the operation discriminator 2 and applied to the command discriminator 12.

The operation discriminator 2 supplies a CMD signal representing the operation given to the touch panel 1 to the command discriminator 12. In response to the CMD signal the command discriminator 12 applies a command to the system controller 13 for operating the acoustic device.

In general, the following commands are required for acoustic devices used in vehicles:

(1) Tape deck

Fast forward, rewind, stop, repetitive playback, jump for station and playback.

(2) Tuner

Up sweep, down sweep, preset channel up, preset channel down, channel preset, and auto tuning

(3) Compact disk

Playback, partial repeat, whole repeat, skip, stop, jump for music, and disk take-out.

As is apparent from the above, six or seven different commands are required for each acoustic device used in vehicles.

These commands can be issued by utilisation of, for example, seven finger movements or operations on the touch panel; movements of the finger upwardly, downwardly, right and left (in, D, R, & L), keeping the finger at a point (KEEP), touching the panel briefly (HIT) and touching the panel briefly twice (2HIT). The above described operations are discriminated by the discriminator 2 which provides outputs to the command discriminator 12 which gives appropriate commands to the acoustic devices.

The above-described operations can be discriminated not only by the contents of the arithmetic circuit, but also based on the touch memory circuit 10 in which the touch condition of the preceding scan is stored, the content of the command memory 11 which stores the command or output given to the command discriminator 12 before the scan, and the time determined by the timer 7.

For instance, the commands can be issued as follows:

(1) When the co-ordinate changes are at least four a second, the commands corresponding to U, D, R and L operations (movements) are outputted separately;

(2) The command KEEP is outputted when the finger is kept on the touch panel for at least one second and moves three co-ordinate positions or less.

(3) The command HIT is outputted when the finger is kept on the panel for 0.5 second or less, and moves three coordinates or less.

(4) The command 2HIT is outputted when, within two seconds after the issue of the command HIT, the finger is moved (operated) in the same manner as in the case of outputting the command HIT.

A method of discriminating the above-described finger operations will be described with reference to the flow charts of Figs. 6, 7, and 8.

In these figures, steps 1 through 7 form a routine for starting, when the finger touches the panel, storage of the co-ordinates of that position and the operation of the timer. After the operation discriminator 2 outputs a scan instruction signal (STB) in step 1, in step 2 it is determined whether or not the finger touches the panel. When it is determined that the finger has touched the touch panel in step 3 the coordinates of that position are read. In step 4, the content of the touch memory 10, which stores the touch condition of the touch condition of the preceding scan, is read to determine whether or not the finger has touched the panel for the first time. If it is determined that the content of the touch memory 10 has been cleared, then in step 5 a "1" is written into the touch memory. In step 6 the above-described coordinates of the position are stored in the coordinate memory 6, and in step 7 the timer is reset and started.

(1) Discrimination of the finger operations U, D, R and L

Discrimination of the finger operations U, D, R and L is achieved in steps 8 through 17.

In step 8, the coordinates stored in the coordinate memory 10 are compared with the present coordinates to obtain the variations in the X- and Y-directions. In step 9, by referring to the command memory 11 which stores the operation content outputted previously, it is determined whether or not the upward, downward, rightward or leftward operation has been applied to the command discriminator 12. If it is determined that one of such operations has been applied thereto, then it is unnecessary to discriminate the movement in that direction again, and steps 11 and 11' are effected in which the movement in a

EP 0 330 767 B1

direction perpendicular to the direction of that movement is detected so that the finger movement may not be regarded as "the finger is moved four coordinates twice", when the finger is moved eight coordinates or more. If no command is applied to the command discriminator 12, then in step 10 it is determined, from the above-described variations, whether the finger is moved horizontally or vertically.

5 In step 12, it is determined whether, in each of the X- and Y-directions, the finger is moved in the positive (+) direction or in the negative (-) direction, so that in step 13 the operation content corresponding to the direction of movement is provided.

In step 14, the operation content thus provided is applied to the command discriminator 12 (in this operation, the command discriminator 12 supplies the instruction to the system controller 13 which has been predetermined for the electronic equipment in use), and in step 15 the operation content is stored in the command memory 11.

In step 16, the coordinates stored in the coordinate memory are rewritten into those of the touch position obtained at the time of outputting the operation content, and in step 17, the timer is reset so that the following discrimination is carried out.

15

(2) Discrimination of the finger operation KEEP

The finger operations KEEP and HIT are distinguished from each other according to how long the finger touches the touch panel. Therefore, if the finger operation KEEP is determined merely from the time count data of the timer 7, then the determination may include the finger operation HIT. That is, in the following case:

25

0 to 0.5 second	HIT
0.5 to 1 second	Not applicable
More than 1 second	KEEP

while the finger operation KEEP is discriminated the finger operation HIT may occur. In the case where the touch time is 0.5 to 1 second, no action is taken, as was listed above. This is to prevent an erroneous operation which may be caused when the finger operations are not strictly defined. Therefore, the step may be eliminated as the case may be.

Therefore, in a routine consisting of steps 18 through 25 as shown in Fig. 7, when at step 20 the time count data of the timer exceeds one (1) second and in step 22 it is determined that the finger operation KEEP has not been supplied as the operation content to the command discriminator 12, then it is supplied as the operation content to the command discriminator 12 in step 24. The reason why, in step 22, it is detected whether or not the finger operation KEEP has been supplied as the operation content is to prevent the difficulty that, when the finger touches the touch panel for more than two seconds, the finger operation KEEP may be provided as the operation content two or more times.

When in step 18 the touch time is shorter than 0.5 second, in step 19 the finger operation HIT is provided as the operation content; however, it is not applied to the command discriminator 12 yet in the flow chart.

(3) Discrimination of the finger operations HIT and 2HIT

45 The finger operations HIT and 2HIT can be identified as shown in the flow chart of Fig. 8.

When in step 2 of Fig. 6 it is determined that the finger is not in touch with the touch panel, then in step 26 it can be determined by referring to the touch memory 10, adapted to store the touch or non-touch detected in the preceding scan, whether or not the touch was just now released. When it is determined that the touch was released just now, then the content of the touch memory 11 is "1". In step 27, the content of the touch memory 11 is cleared, and in step 29 it is determined whether or not the operation content is of the finger operation HIT. That is, if in step 19 of Fig. 7 the finger operation HIT is provided as the operation content, then step 30 is effected. In step 30, when it is determined from the content of the command memory 11 that nothing is provided, then the operation content, or HIT, is applied to the command discriminator 12. If the finger operation HIT is applied as the operation content in the command memory 11, then it is the second finger operation HIT, and therefore the finger operation 2HIT is applied as the operation content to the command discriminator 12. If the storage data of the command memory 11 is other than that, then in a routine of steps 36 through 38 the command memory and the operation content are cleared and the timer is stopped.

EP 0 330 767 B1

When in step 26 it is determined that the content of the touch memory 10 has been cleared since the preceding scan, then step 28 is effected. If, in step 28, the timer shows the lapse of two seconds, i.e. nothing is operated for two seconds, then the routine of steps 36, 37 and 38 is effected.

5 The operation discriminator 2 can apply the seven operating modes to the command discriminator 12 in the above described manner.

In the operation discriminator 2, the above-described operation contents are converted into commands (outputs) suitable for the operations of the acoustic devices to be controlled in such a manner that any one of the commands can be used for a plurality of acoustic devices - for instance the finger operation R is used for the "up direction sweep" of a tuner and also for the "fast forward" of a tape deck. The commands
10 are applied to the system controller 13 by the command discriminator 12. In response to the commands, the system controller 13 controls the operations of the acoustic devices.

In the above-described embodiment, the seven finger operations are discriminated, and in response to the seven finger operations thus discriminated the command discriminator outputs the commands. If the seven finger operations are utilised in combination, then more commands can be issued.

15 For instance, in the case of a tape deck, the finger operations may be combined as follows: When, after the "fast forward" operation is selected by the finger operation R, the finger operation U is carried out, a so-called "FF Scan" operation can be performed in which the "fast forward" operation of the tape is carried out to detect an intermusic region, and after the sound reproduction is performed, the "fast forward" operation is carried out again. When the finger operation R is followed by the finger operation D, the "FF music search" operation is carried out.

In this case, the system controller 13 applies data representing the operating condition of the acoustic device to the command discriminator 12 at all times, and the command provided by the command discriminator is determined according to the operating condition.

25 In the case of the tape deck described above, normally the finger operation R is used for the command "fast forward", and the finger operation U is for the command "volume up". However, during the "fast forward" operation, the finger operation U is used to output the command "FF scan".

If a plurality of operation outputs are combined to provide a command in the above-described manner, then the finger operations can be applied to a variety of operation modes of acoustic devices mounted in a vehicle.

30 The touch panel 1 may comprise a picture display unit such as a cathode ray tub (CRT). The system controller 13 applies display mode data to a CRT driver 14 in correspondence to an acoustic device in use, thereby to control the display on the touch panel 1.

Figs. 9(a) and 9(b) show examples of a CRT display. More specifically, the part (a) of Fig. 9 shows a CRT display in the "tape deck" mode, and the part (b) of Fig. 9 shows a CRT display in a "tuner" mode.

35 In Fig. 9, the finger operations U, D, R and L are indicated by the arrows which are extended upwardly, downwardly, rightwardly and leftwardly, respectively, and finger operations HIT, 2HIT and KEEP are indicated by one dot, two dots and a bar, respectively; and the compound finger operations are indicated by the bent arrows - for instance the compound finger operation R U is indicated by the arrow which is extended rightwardly and then upwardly.

40 Therefore, merely by moving the finger according to the indications or marks displayed on the touch panel, the commands corresponding to the finger operations can be applied to the system controller 13.

The contents of the display on the display unit can be changed according to the operation conditions of an acoustic device to be controlled. For instance, for the "fast forward" operation of a tape deck, the mark ">>" is caused to flicker or its colour is changed, so that the operator can detect whether or not the finger
45 operation on the touch panel has been carried out correctly, to thereby prevent erroneous operation.

As shown in Fig. 9 the display mark "2nd" is provided for the finger operation KEEP. It can be utilized in the case where the number of finger operations is smaller than the number of commands to be issued. That is, in this case, the first picture display is switched over to the second picture display by one finger operation (KEEP in this case) so that the command discriminator 12 can provide commands different from
50 those used when the first picture display is employed. That is, more intricate operations of electronic devices can be controlled.

As is apparent from the above description, the predetermined commands can be issued according to the distance of movement of the finger over the touch panel, the period of time for which the finger touches the touch panel, and the number of time the touch panel is touched with the finger, and one and the same
55 touch panel can be used for a plurality of acoustic devices such as a cassette tape player and a radio tuner installed in a vehicle. Therefore, the limited space in the vehicle can be efficiently utilized, and the touch panel control device installed will never obstruct the operator's driving.

Furthermore, since the touch panel serves as the display unit, the probability of erroneous operation is decreased.

Claims

5

1. A touch panel control device for outputting commands, according to how a finger touches a touch panel (1), the device comprising
 touch position detecting means (101,114,201,214) in a matrix form on said touch panel (1), for detecting a touch on the touch panel and providing output signals;
 10 means (4,5) for detecting the co-ordinates of the touch position from the said output signals of the said touch position detecting means and providing an output representative thereof;
 scanning means (2,3) for periodically providing a scanning signal to the touch position detecting means to enable touch detection;
 duration timer means (7) for providing a time measurement signal on receipt of a trigger signal
 15 from the touch position detecting means;
 co-ordinate memory means (6) for storing the co-ordinates of a current touch position on the touch panel detected by the co-ordinate detecting means (4,5);
 co-ordinate comparing means for comparing, for each scan, the coordinates of the previously stored current touch position in the memory means with those of a current touch position;
 20 characterised by
 an operation discriminator (2) for determining, according to the relationship between the timer measurement signals received from the timer means (7) and the results of the comparison from the co-ordinate comparing means, which of a plurality of predetermined outputs to issue, whereby, by the user touching and/or moving a finger across the touch panel (1), an operational mode for an electronic
 25 device can be commanded, said operation discriminator including means for determining which output to issue from a plurality of predetermined outputs based upon the direction and distance the finger moves in a predetermined period of time and means for determining which output to issue from the said plurality of predetermined outputs based on the time duration that the finger touches the touch panel while moving less than a predetermined distance.

30

2. A device according to claim 1, further including a command discriminator for receiving the outputs from the operation discriminator and for issuing respective operational commands to the electronic device.

35

3. A device as claimed in claim 1 or claim 2, wherein the touch position detecting means comprises light emitting elements (101-114) and light receiving elements (201-214) arranged along the sides of the touch panel (1) in such a manner that said light receiving elements receive light beams emitted by respective light emitting elements.

40

4. A device as claimed in claim 2, in which the touch panel (1) comprises a picture display unit, the display of which is changeable according to the operating conditions of the electronic device to be controlled.

Patentansprüche

45

1. Eine Berührungsschalttafel-Steuereinrichtung zum Ausgeben von Befehlen entsprechend einer Art und Weise, wie ein Finger eine Berührungsschalttafel (1) berührt, wobei die Vorrichtung umfaßt:
 die Berührstellen nachweisende Vorrichtungen (101, 114, 201, 214), die in der Form einer Matrix auf der Berührungsschalttafel (1) angeordnet sind, um eine Berührung auf der Berührungsschalttafel nachzuweisen und Ausgabesignale zu schaffen;
 50 Vorrichtungen (4, 5) zum Feststellen der Koordinaten der Berührungsstellen aus den Ausgabesignalen der, die Berührungsstellen nachweisenden Vorrichtungen und zum Schaffen einer Ausgabedarstellung davon;
 abrasternde Vorrichtungen (2, 3), um periodisch ein Abrastersignal für die, die Berührungslagen nachweisenden Vorrichtungen bereitzustellen, um einen Berührungsnachweis zu ermöglichen;
 55 eine Zeitdauermeßvorrichtung (7), um ein Zeitmeßsignal nach Empfang eines Auslösesignals von den, die Berührungslage nachweisenden Vorrichtungen zu schaffen;
 eine Koordinatenspeichervorrichtung (6) zum Speichern der Koordinaten einer vorliegenden Berührungsstelle auf der Berührungsschalttafel, die von den, die Koordinaten feststellenden Vorrichtungen (4,

EP 0 330 767 B1

5) festgestellt wurden;

eine die Koordinaten vergleichende Vorrichtung zum Vergleichen der Koordinaten der vorher gespeicherten vorliegenden Berührungsstelle in der Speichervorrichtung mit denen einer gegenwärtig vorliegenden Berührungsstelle bei jedem Abrastervorgang;

5 **gekennzeichnet durch**

eine Betriebsunterscheidungsvorrichtung (2), um entsprechend der gegenseitigen Beziehung zwischen den von der Zeitmeßvorrichtung (7) empfangenen Zeitmeßsignalen und den Ergebnissen des Vergleichs von der die Koordinaten vergleichenden Vorrichtung zu bestimmen, welche Ausgaben aus einer Vielzahl von vorbestimmten Ausgaben auszugeben sind, wodurch, wenn der Benutzer die Berührungsschalttafel (1) berührt und/oder einen Finger darüber bewegt, eine Betriebsweise für eine elektronische Vorrichtung angewiesen werden kann, wobei die Betriebsunterscheidungsvorrichtung eine Vorrichtung einschließt, um zu bestimmen, welche Ausgabe von einer Vielzahl von vorbestimmten Ausgaben auf der Grundlage der Richtung und Entfernung des sich bewegenden Fingers während einer vorbestimmten Zeitdauer auszugeben ist, und die weiter eine Vorrichtung einschließt, um zu bestimmen, welche Ausgabe aus der Vielzahl von vorbestimmten Ausgaben auf der Grundlage der Zeitdauer, in der der Finger die Berührungsschalttafel berührt, wenn er weniger als eine vorbestimmte Strecke sich bewegt, auszugeben ist.

2. Eine Vorrichtung nach Anspruch 1, die weiter eine Befehlsunterscheidungsvorrichtung einschließt, um die Ausgaben von der Betriebsunterscheidungsvorrichtung zu empfangen und entsprechende Betriebsanweisungen an die elektronische Vorrichtung auszusenden.

3. Eine Vorrichtung nach Anspruch 1 oder 2, wobei die, die Berührungsstelle nachweisenden Vorrichtungen Licht emittierende Elemente (101-114) und Licht empfangende Elemente (201-214) umfassen, die entlang der Seiten der Berührungsschalttafel in einer solchen Weise angeordnet sind, daß die Licht empfangenden Elemente Lichtstrahlen empfangen, die von den entsprechenden Licht emittierenden Elementen emittiert wurden.

4. Eine Vorrichtung nach Anspruch 2, in der die Berührungsschalttafel (1) eine Bildanzeigeeinheit umfaßt, deren Anzeige sich gemäß dem Betriebszustand der zu steuernden elektronischen Vorrichtung ändern kann.

Revendications

35 1. Dispositif de commande de panneau tactile destiné à émettre des commandes conformément à la façon dont un doigt effleure un panneau tactile (1), le dispositif comprenant :

un moyen de détection de position d'effleurement (101, 114, 201, 214) sous forme matricielle situé sur ledit panneau tactile (1) pour détecter un effleurement sur le panneau tactile et pour produire des signaux de sortie ;

40 un moyen (4, 5) pour détecter les coordonnées de la position d'effleurement à partir desdits signaux de sortie dudit moyen de détection de position d'effleurement et pour produire une sortie représentative de celles-ci ;

un moyen de balayage (2, 3) pour produire périodiquement un signal de balayage pour le moyen de détection de position d'effleurement afin de permettre une détection d'effleurement ;

45 un moyen de minuterie de durée (7) pour produire un signal de mesure de temps suite à la réception d'un signal de déclenchement en provenance du moyen de détection de position d'effleurement ;

un moyen de mémoire de coordonnées (6) pour stocker les coordonnées d'une position d'effleurement courante sur le panneau tactile détecté par le moyen de détection de coordonnées (4, 5) ;

50 un moyen de comparaison de coordonnées pour comparer, pour chaque balayage, les coordonnées de la position d'effleurement courante stockées préalablement dans le moyen de mémoire à celles d'une position d'effleurement courante ;

caractérisé par :

55 un discriminateur de fonctionnement (2) pour déterminer, conformément à la relation qui lie les signaux de mesure de minuterie reçus depuis le moyen de minuterie (7) et les résultats de la comparaison en provenance du moyen de comparaison de coordonnées, laquelle d'une pluralité de sorties prédéterminées il convient de délivrer, d'où il résulte que, du fait de l'effleurement de l'utilisateur et/ou du déplacement d'un doigt sur le panneau tactile (1), un mode de fonctionnement pour

EP 0 330 767 B1

- 5 un dispositif électronique peut être commandé, ledit discriminateur de fonctionnement incluant un moyen pour déterminer quelle sortie il convient de délivrer parmi une des sorties prédéterminées sur la base de la direction et de la distance selon lesquelles le doigt se déplace pendant une période temporelle prédéterminée et un moyen pour déterminer quelle sortie il convient de délivrer parmi
lesdites pluralités de sorties prédéterminées sur la base de la durée temporelle pendant laquelle le doigt affleure le panneau tactile tout en se déplaçant sur une distance inférieure à une distance prédéterminée.
- 10 **2.** Dispositif selon la revendication 1, incluant en outre un discriminateur de commande pour recevoir les sorties en provenance du discriminateur de fonctionnement et pour délivrer des commandes de fonctionnement respectives au dispositif électronique.
- 15 **3.** Dispositif selon la revendication 1 ou 2, dans lequel le moyen de détection de position d'effleurement comprend des éléments émetteurs de lumière (101-114) et des éléments récepteurs de lumière (201-214) agencés le long des côtés du panneau tactile (1) d'une manière telle que lesdits éléments récepteurs de lumière reçoivent des faisceaux lumineux émis par les éléments émetteurs de lumière respectifs.
- 20 **4.** Dispositif selon la revendication 2, dans lequel le panneau tactile (1) comprend une unité d'affichage d'image dont l'affichage peut être modifié en relation avec les conditions de fonctionnement du dispositif électronique qui doit être commandé.

Mail Stop AMENDMENT
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.111

Sir:

In response to the Office Action dated December 23, 2008, applicant respectfully requests that the above-identified application be amended as follows:

IN THE CLAIMS:

Please cancel claims **17** and **19 – 47** without prejudice.

Please substitute the following claims for the pending claims with the same number:

1. (currently amended) A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

a touch sensitive area in which representations of a ~~plurality of functions~~ at least one function are displayed, and each function of said ~~plurality of functions~~ at least one function being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the touched location.

2. (currently amended) The computer readable medium of claim **1**, wherein one function from the ~~plurality of functions~~ at least one function, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. (previously presented) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. (currently amended) The computer readable medium of claim **1**, wherein one function from the ~~plurality of functions~~ at least one function, when activated, causes the user interface to display a keyboard and a text field.

5. (previously presented) The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. (currently amended) The computer readable medium of claim **1**, wherein one function from the ~~plurality of functions~~ at least one function, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. (previously presented) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. (previously presented) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files.

9. (currently amended) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and the user interface enables list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list.

10. (currently amended) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is (i) glided along said touch sensitive area to the top or bottom ~~position~~ of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said ~~touch sensitive area will be replaced~~ list up or down by one whole page.

11. (currently amended) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position.

12. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is ~~moved on~~ advanced one step by gliding the

object along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said representations of said ~~plurality of functions~~ at least one function are located at the bottom of said touch sensitive area.

14. (previously presented) The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. (previously presented) An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said touch sensitive area.

16. (previously presented) The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. (cancelled)

18. (currently amended) ~~[[A]]~~ The computer readable medium ~~according to Claim **17** of claim **1**~~ of claim **1**, characterised in, that said computer program ~~product~~ code is adapted to function as a shell upon an ~~operations~~ operating system.

19. – 47. (cancelled)

REMARKS

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has cancelled claims **17** and **19 – 47**, and amended claims **1, 2, 4, 6, 9 – 13** and **18** to properly claim the present invention. No new matter has been introduced. Claims **1 – 16** and **18** are presented for examination.

In Paragraphs 3 and 4 of the Office Action, the Examiner has rejected claim **1** under 35 U.S.C. §102(e) as being anticipated by Nakajima et al., US Patent No. 6,346,935 (“Nakajima”).

In Paragraphs 5 and 6 of the Office Action, the Examiner has rejected claims **2 – 11** and **14 – 18** under 35 U.S.C. §103(a) as being unpatentable over Nakajima in view of Rogue, “Palm Pilot: The Ultimate Guide, 2nd Edition (“Rogue”). Applicant has canceled claim **17** without acquiescence to the Examiner’s reasons for rejection and respectfully submits that rejection of those claims is thus rendered moot.

In Paragraph 7 of the Office Action, the Examiner has rejected claims **12** and **13** under 35 U.S.C. §103(a) as being unpatentable over Nakajima in view of Rogue, and further in view of O’Rourke, US Patent No. 7,225,408 (“O’Rourke”).

Distinctions between Claimed Invention and U.S. Patent No. 6,346,935 to Nakajima et al., Rogue, Palm Pilot: The Ultimate Guide, 2nd Edition, and U.S. Patent No. 7,225,408 to O'Rourke

Aspects of the subject invention concern a touch-based user interface with functionalities for running interactive applications using touch-based icons, for inputting text using a touch-based keypad, and for managing files using a touch-based file listing. User inputs include finger taps and movements. One such movement is a "rubbing" / "swiping" / "touch-and-glide" movement, whereby a finger touches a touch-sensitive screen at a location where an icon for a function is displayed, and then rubs / swipes / glides, along the touch screen away from the location without lifting the finger. The touch-and-glide movement of the subject claimed invention is illustrated in FIGS. 2, 7 and 10 of the original specification by a left-arrow and a thumb touching a touch-sensitive screen.

The touch-and-glide movement of the subject claimed invention is used to activate functions (original specification/ Abstract; page 2, lines 25 – 28; page 5, lines 24 – 27; FIG. 2; original claim **1**), and to scroll a selector forward and backward within a list to select a desired item in the list, and to page up and page down within a list (original specification/ page 3, lines 28 – page 4, line 2; page 7, lines 7 – 10; page 7, line 27 – page 9, line 14; FIGS. 7 and 10; original claims **7**, **9** and **10**). The touch-and-glide movement of the subject claimed invention activates a function that corresponds to the icon displayed at the touch point.

Nakajima teaches several touch pads for operating a notebook personal computer. The touch pads are designed efficiently so as to avoid waste of their touch-sensitive areas caused by raised frames

that surround the touch-sensitive areas. As shown in FIG. 13 of Nakajima, and described at col. 2, lines 52 – 65, for prior art touch pads, the regions of a touch-sensitive area that border the inner periphery of the frame, along a strip of width G, are blocked by the frame from access by a finger, F. As such, these border regions of the prior art touch-sensitive area are wasted.

The touch pads of Nakajima have frames with inner peripheries that are designed to enable a user to access border regions of the touch-sensitive areas. Examples of such designs are shown in FIGS. 5, 6 and 9 of Nakajima. A no-sensor area, denoted Ans in FIG. 9, separates an effective sensor area, denoted Ls in FIG. 9, from the inner periphery of frame 6E. Recesses and curvatures in the inner periphery of the frame make it possible for a finger to touch all portions of effective sensor area Ls, including the edges and corners thereof. Moreover, the inner periphery of frame 6E serves as a convenient guide, to assist the finger in moving to a desired edge and corner of effective sensor area Ls. In distinction, these edge and corner regions are inaccessible with the prior art touch pad shown in FIG. 13 of Nakajima.

The edge and corner regions of the touch-sensitive areas, when touched, trigger activation of functions corresponding to the touched regions. FIGS. 16 and 21 of Nakajima, and the description at col. 17, line 60 – col. 18, line 30, show an exemplary correspondence between border regions 2202 - 2207 of a touch-sensitive area 2101, and operations that they trigger when double-tapped.

Rogue is a user's guide for the PalmPilot device. Rogue teaches how to operate the PalmPilot's touch-based user interface, and the various functions that are available.

O'Rourke describes a medical information system and a user interface for medical staff to access, process and update patient record information via portable palmtop devices, and to transfer such information between portable devices. The user interface of O'Rourke is illustrated in FIGS. 9 – 20 of O'Rourke.

Response to Examiner's Arguments

In rejecting independent claim **1**, the Examiner, citing Nakajima col. 15, lines 1 – 15, has indicated that Nakajima teaches activating a function by an object touching a location corresponding to the function and then gliding along the touch sensitive area away from the location.

Applicant respectfully submits that the frame-guided movement of Nakajima is of a fundamentally different nature than the touch-and-glide movement of the subject claimed invention. The frame-guided movement of Nakajima glides over a non-touch sensitive portion of the screen. Specifically, as shown in FIG. 9 of Nakajima and described at col. 16, line 4 – page 17, line 17, the gliding movement occurs over the no-sensor area Ans. As recited by Nakajima at col. 9, line 55: *"Between the inner periphery of the frame 6E and the effective sensor area Ls, there is an area including no sensors, that is, the non-sensor area Ans."* Gliding an object over the no-sensor area Ans ensures that the edges and corners of the effective sensor area Ls are accessible and not wasted, which is the first objective of Nakajima (Nakajima/ col. 2, lines 52 – 65; col. 16, lines 19 – 24).

The following table summarizes some of the relevant distinctions.

Frame-guided movement of Nakamura	Touch-and-glide movement of the claimed invention
Glide is over non-touch sensitive portion of screen	Glide is over touch-sensitive portion of screen
Glide followed by touch	Touch followed by glide
Glide is toward touch point	Glide is away from touch point
Glide is along periphery of touch-sensitive area	Glide is along interior of touch-sensitive area
Glide movement is guided by inner periphery of raised frame	Glide movement is unguided
Only the touch point is processed by the user interface	Both the touch point and the glide are processed by the user interface
Frame-guided touch has the same effect as a touch alone	Touch-and-glide has a different effect than a touch alone

In rejecting dependent claim **2**, the Examiner, citing Rogue, Figure 1.2, has indicated that Rogue teaches a function which, when activated, causes the user interface to display icons representing different services or setting for a currently active application. Applicant respectfully submits that the PalmPilot applications buttons is used to display icons representing installed programs, and does not relate to a currently active application. Moreover, the PalmPilot applications button is used to launch a not-currently active application.

In rejecting dependent claims **6** and **8**, the Examiner, citing Rogue, Sidebar 1, Categories, has indicated that Rogue teaches a function which, when activated, causes the user interface to display a list of available applications and files. Applicant respectfully submits that the PalmPilot category pages described in Rogue do not display files. They only display installed applications, as indicated by Rogue in Sidebar 1.

Moreover, Rogue does not describe changing the display from displaying only applications to displaying only files, and vice versa.

In rejecting dependent claim **9**, the Examiner, citing Rogue, Figure 1.4, has indicated that Rogue teaches a gliding input that causes a marking to move up and down a list without scrolling the list. Applicant respectfully submits that the PalmPilot menus, as described in Rogue, are navigated via tapping and not via gliding.

In rejecting dependent claims **10** and **11**, the Examiner, citing Nakajima, col. 14, lines 45 – 57, has indicated that Nakajima teaches a compound movement, used to advance an entire page of a list, by (i) gliding an object along a touch-sensitive area to the top or bottom of the touch-sensitive area, (ii) raising the object from the touch-sensitive area, (iii) replacing the object on the touch-sensitive area, and (iv) gliding the object again along the touch-sensitive area to the top or bottom of the touch-sensitive area. Applicant respectfully submits that Nakajima describes an up/down scroll function, which is not the glide-raise-replace-glide movement of the subject claimed invention. Moreover, the up/down scroll function causes a list to advance by one line, and not by an entire page. Applicant further respectfully submits that Nakajima does not describe a list navigation movement that continues when the object is (i) raised from a first position on the touch-sensitive area, and (ii) replaced at a second position of the touch-sensitive area.

In order to further clarify these distinctions, applicant has amended claim **10** to elaborately list the four stages of the compound glide-raise-replace-glide list navigation movement.

In rejecting dependent claim **12**, the Examiner, citing Nakajima, col. 14, lines 45 – 57 and O'Rourke, Figure 13, has indicated

that Nakajima and O'Rourke teach advancing an active application / function / service / setting forward and backward one step by gliding an object along a touch-sensitive area respectively from left to right and from right to left. Applicant respectfully submits that the forward and backward operations described in Nakajima and O'Rourke are performed by tapping on arrowheads, and not by gliding an object left to right, or right to left. Use of touch-based scroll bars is described in Rogue with reference to Figure 1.2: "*To scroll ... tap one of the up/down triangle buttons on the scroll bar ...*". Moreover, the cited location of Nakajima recites "*The double-headed arrow 18a ... is a sign of an up/down scroll function ... the user can understand ... the region assigned the function ...*"; i.e., tapping on sign 18a causes a scroll up.

The rejections of the claims **1** – **18** in paragraphs 3 - 7 of the Office Action will now be dealt with specifically.

As to amended independent claim **1** for a computer readable medium, applicant respectfully submits, as indicated hereinabove, that the limitation in claim **1** of

"each function ... being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the touched location"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **2** of

"one function ... when activated, causes the user interface to display icons representing different services or settings for a currently active application"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **6** of

"one function ... when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in dependent claim **8** of

"said list presents only files or only applications, and that an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **9** of

"list navigation whereby gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list causes said marking to move in the same direction without scrolling the list"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **10** of

"if the object is (i) glided along said touch sensitive area to the top or bottom of said touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area, said list navigation pages the content of said list up or down by one whole page"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **11** of

"if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said list navigation can be continued from said second position"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Additionally, as indicated hereinabove, the limitation in amended dependent claim **12** of

"an active application, function, service or setting is advanced one step by gliding the object along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left"

is neither shown nor suggested in Nakajima, Rogue or O'Rourke.

Because claims **2 – 16** and **18** depend from claim **1** and include additional features, applicant respectfully submits that claims **2 – 16** and **18** are not anticipated or rendered obvious by Nakajima, Rogue, O'Rourke, or a combination of Nakajima, Rogue or O'Rourke.

Accordingly claims **1 – 16** and **18** are deemed to be allowable.

Support for Amended Claims in Original Specification

Dependent claim **10** has been amended to include the limitations of the object being (i) glided along the touch sensitive area to the top or bottom position of the touch sensitive area, then (ii) raised above said touch sensitive area, then (iii) replaced on said touch sensitive area, and then (iv) again glided along said touch sensitive area to the top or bottom of said touch sensitive area. These limitations are supported in the original specification at least at page 7, line 32 – page 8, line 10; and FIG. 9.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

Respectfully submitted,

Dated: April 22, 2009

/Marc A. Berger/

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

UNITED STATES PATENT AND TRADEMARK OFFICE

UNITED STATES DEPARTMENT OF COMMERCE

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO. Includes sub-tables for EXAMINER (PITARO, RYAN F), ART UNIT (2174), and MAIL DATE (12/23/2008) DELIVERY MODE (PAPER).

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/315,250	Applicant(s) GOERTZ, MAGNUS	
	Examiner RYAN F. PITARO	Art Unit 2174	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 15 October 2008.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-18 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-18 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
 Paper No(s)/Mail Date _____.
- 4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date. _____.
- 5) Notice of Informal Patent Application
- 6) Other: _____.

Response to Amendment

1. This action is in response to the amendment filed 10/15/2008. In the amendment claims 1-18 were amended. This action is non-final.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/15/2008 has been entered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Nakajima et al (“Nakajima”, 6,346,935).

As per claim 1, Nakajima teaches a computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising: a touch sensitive area in which representations of a plurality of functions are displayed (Column 15 lines 1-9, *function signs*), and each function of said plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed (Column 15 lines 1-9, *stops moving finger*), and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location (Column 15 lines 1-15, *stops moving finger then glides finger to lightly press surface*).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-11,14-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al (“Nakajima”, 6,346,935) in view of Rogue (“Rogue”, Palm Pilot: The Ultimate Guide, 2nd Edition).

As per claim 2, Nakajima fails to particularly disclose a function to display a plurality of functions. However, Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display icons representing different services or settings for a currently active application (Figure 1.2, *Tap the application button to display your application launching screen*). Therefore it would have been obvious to an artisan at the time of the invention to combine the teaching of Rogue with the medium of Nakajima. Motivation to do so would have been to provide a way to reduce screen clutter and only access the applications when needed.

As per claim 3, Nakajima-Rogue teaches a computer readable medium of claim 2, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting (Nakajima, Column 18 lines 30-40, tap).

As per claim 4, Nakajima-Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when_activated, causes the user interface to display a keyboard and a text field (Figure 2.5, power stroke up, Figure 2.6).

As per claim 5, Nakajima-Rogue teaches a wherein said text field is used for inputting and editing of text through said keyboard (Nakajima, Figure 2.6).

As per claim 6, Nakajima-Rogue teaches a computer readable medium of claim 1, wherein one function from the plurality of functions, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit (Rogue, Sidebar 1, Categories).

As per claim 7, Nakajima-Rogue teaches a computer readable medium of claim 6, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area (Nakajima, Column 18 lines 40-56).

As per claim 8, Nakajima-Rogue teaches a computer readable medium of claim 7, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that an area of said list presents a field through which the said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files (Rogue, Sidebar 1, Categories).

As per claim 9, Nakajima-Rogue teaches a computer readable medium of claim 7, wherein the user interface is characterised in, that, one item in said list is highlighted by a moveable marking, and gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, causes said marking to move in the same direction without scrolling the list (Rogue, Figure 1.4, using the menu).

As per claim 10, Nakajima-Rogue teaches a computer readable medium of claim 9, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is glided along said touch sensitive area to the top or bottom position of said touch sensitive area, then raised, replaced on said touch sensitive area, and again glided along said touch sensitive area to the top or bottom of said touch sensitive area, the content of said touch sensitive area will be replaced one whole page (Nakajima, Column 14 lines 45-57).

As per claim 11, Nakajima-Rogue teaches a computer readable medium of claim 10, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said navigation can be continued from said second position (Nakajima, Column 14 lines 45-57).

As per claim 14, while Nakajima-Rogue-O'Rourke fails to teach a touch sensitive area is 2-3 inches. OFFICIAL NOTICE is taken that screen sizes vary and screens with a touch sensitive area of 2-3 inches diagonally is well known in the art. Therefore it would have been obvious to an artisan at the time of the invention to combine the screen size with the medium of Nakajima-Rogue. Motivation to do so would have been to provide adequate size to operate the touch screen while keeping it small enough to fit in a pocket.

As per claim 15, Nakajima-Rogue teaches a enclosure adapted to cover the mobile handheld computer unit according to Claim 1, characterised in, that said enclosure is provided with an opening for said touch sensitive area (Rogue, Figure 1.1).

As per claim 16, Nakajima-Rogue fails to teach an enclosure is removable and exchangeable. OFFICIAL NOTICE is taken that an enclosure is removable and exchangeable is well known in the art. Therefore it would have been obvious to an

artisan at the time of the invention to combine the exchangeable enclosure with the medium of Nakajima-Rogue. Motivation to do so would have been to provide a way to style your mobile device so that it can be personalized to a user's taste.

As per claim 17, Nakajima-Rogue teaches a a computer readable medium, with a computer program product stored therein, characterised in, that said computer program product comprises computer readable code, which, when read by a computer, will make it possible for said computer to present a user interface according to Claim 1 (Rogue, 1.1 Palm Pilot Basics).

As per claim 18, Nakajima-Rogue teaches a computer readable medium according to Claim 17, characterised in, that said computer program product is adapted to function as a shell upon an operations system (Rogue, 1.1 Palm Pilot Basics).

7. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al ("Nakajima", 6,346,935) in view of Rogue ("Rogue", Palm Pilot: The Ultimate Guide, 2nd Edition) in view of O'Rourke (O'Rourke, US 7,225,408).

As per claim 12, Nakajima-Rogue teaches a computer readable medium of claim 1, wherein the user interface is characterized in, that an active application, function, service or setting is moved on one step by gliding the object along the touch sensitive area from left to right (Nakajima, Column 14 lines 45-57). However, Nakajima-Rogue fails to distinctly point out closing or backing one step. However, O'Rourke teaches that the active application, function, service or setting is closed or backed one step (Figure 13, right and left arrows). Therefore it would have been obvious to an artisan at the time of the invention to combine the glide functionality with the forward and backward functionality of O'Rourke. Motivation to do so would have been to provide an easy way to traverse the GUI.

As per claim 13, Nakajima-Rogue-O'Rourke teaches a computer readable medium of claim 1, wherein the user interface is characterised in, that said representations of said plurality of functions are located at the bottom of said touch sensitive area (O'Rourke, Figure 13, icons at bottom right) .

Response to Arguments

Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN F. PITARO whose telephone number is (571)272-4071. The examiner can normally be reached on 9:00am - 5:30pm Mondays through Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong can be reached on 571-272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Advisory Action Before the Filing of an Appeal Brief	Application No. 10/315,250	Applicant(s) GOERTZ, MAGNUS	
	Examiner RYAN F. PITARO	Art Unit 2174	

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

THE REPLY FILED 08 September 2008 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.

1. The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:

- a) The period for reply expires _____ months from the mailing date of the final rejection.
- b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.

Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

NOTICE OF APPEAL

2. The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).

AMENDMENTS

3. The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, will not be entered because
- (a) They raise new issues that would require further consideration and/or search (see NOTE below);
- (b) They raise the issue of new matter (see NOTE below);
- (c) They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or
- (d) They present additional claims without canceling a corresponding number of finally rejected claims.

NOTE: The newly added claim amendments would require further search and consideration as discussed in an interview. (See 37 CFR 1.116 and 41.33(a)).

4. The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324).
5. Applicant's reply has overcome the following rejection(s): _____.
6. Newly proposed or amended claim(s) _____ would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).
7. For purposes of appeal, the proposed amendment(s): a) will not be entered, or b) will be entered and an explanation of how the new or amended claims would be rejected is provided below or appended.
- The status of the claim(s) is (or will be) as follows:
- Claim(s) allowed: _____.
- Claim(s) objected to: _____.
- Claim(s) rejected: _____.
- Claim(s) withdrawn from consideration: _____.

AFFIDAVIT OR OTHER EVIDENCE

8. The affidavit or other evidence filed after a final action, but before or on the date of filing a Notice of Appeal will not be entered because applicant failed to provide a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented. See 37 CFR 1.116(e).
9. The affidavit or other evidence filed after the date of filing a Notice of Appeal, but prior to the date of filing a brief, will not be entered because the affidavit or other evidence failed to overcome all rejections under appeal and/or appellant fails to provide a showing a good and sufficient reasons why it is necessary and was not earlier presented. See 37 CFR 41.33(d)(1).
10. The affidavit or other evidence is entered. An explanation of the status of the claims after entry is below or attached.

REQUEST FOR RECONSIDERATION/OTHER

11. The request for reconsideration has been considered but does NOT place the application in condition for allowance because: _____.
12. Note the attached Information *Disclosure Statement(s)*. (PTO/SB/08) Paper No(s). _____
13. Other: _____.

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.116

Sir:

In response to the Office Action dated July 11, 2008,
applicant respectfully requests that the above-identified application be
amended as follows:

DO NOT ENTER: /R.P./

10/06/2008

Doc code: RCEX

Doc description: Request for Continued Examination (RCE)

PTO/SB/30EFS (09-08)

Approved for use through 10/31/2008. OMB 0651-0031

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

**REQUEST FOR CONTINUED EXAMINATION(RCE)TRANSMITTAL
(Submitted Only via EFS-Web)**

Application Number	10/315,250	Filing Date	2002-12-10	Docket Number (if applicable)	NEONODE.P004	Art Unit	2174
First Named Inventor	Magnus Goertz			Examiner Name	Ryan F. Pitaro		

This is a Request for Continued Examination (RCE) under 37 CFR 1.114 of the above-identified application.
Request for Continued Examination (RCE) practice under 37 CFR 1.114 does not apply to any utility or plant application filed prior to June 8, 1995, or to any design application. The Instruction Sheet for this form is located at WWW.USPTO.GOV

SUBMISSION REQUIRED UNDER 37 CFR 1.114

Note: If the RCE is proper, any previously filed unentered amendments and amendments enclosed with the RCE will be entered in the order in which they were filed unless applicant instructs otherwise. If applicant does not wish to have any previously filed unentered amendment(s) entered, applicant must request non-entry of such amendment(s).

Previously submitted. If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.

Consider the arguments in the Appeal Brief or Reply Brief previously filed on _____

This collection of information is required by 37 CFR 1.114. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: Neonode AB

Application No./Patent No.: 10/315,250 Filed/Issue Date: December 10, 2002

Entitled: USER INTERFACE

Neonode AB, a corporation
(Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that it is:

- 1. the assignee of the entire right, title, and interest; or
- 2. an assignee of less than the entire right, title and interest
(The extent (by percentage) of its ownership interest is _____ %)

in the patent application/patent identified above by virtue of either:

A. An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.

OR

B. A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: Magnus Goertz To: Neonode Sweden AB
The document was recorded in the United States Patent and Trademark Office at
Reel 018163, Frame 0611, or for which a copy thereof is attached.

2. From: Neonode Sweden AB To: Neonode AB
The document was recorded in the United States Patent and Trademark Office at
Reel 018137, Frame 0448, or for which a copy thereof is attached.

3. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

Additional documents in the chain of title are listed on a supplemental sheet.

As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

Mail Stop AMENDMENT
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

AMENDMENT AND RESPONSE TO OFFICE ACTION
UNDER 37 C.F.R. §1.116

Sir:

In response to the Office Action dated July 11, 2008,
applicant respectfully requests that the above-identified application be
amended as follows:

IN THE DESCRIPTION:

Please amend the specification as follows.

Page 1, ninth full paragraph:

Since the users have gotten used to small handheld units, it is hard to move towards larger units. This has led to foldable keyboards, different kinds ~~of~~ joy sticks and different kinds of touch sensitive displays and pads intended to help in providing a user interface that is suitable for small handheld ~~compute~~ computer units.

Page 2, first full paragraph:

It is a problem to provide a user-friendly interface that is adapted to handle a large amount of information and different kinds of traditional computer-related applications on a small handheld computer unit.

Page 3, sixth full paragraph:

In order to provide a task and file management in a user interface for a handheld mobile computer, the present invention teaches that, if the third function is activated, the display area is adapted to display a list with a library of available applications and files on the computer ~~[[unit]]~~ unit. A selection of an application will start the application, and a selection of a file will open the file in an application intended for the file.

Page 7, fifth full paragraph:

It should ~~[[b]]~~ be understood that all lists in the computer unit, such as a list of contact information in an address book, a

list of e-mail messages in a mailbox, or a telephone log, can be managed in the above described manner.

Page 7, sixth full paragraph:

The list 231 can be adapted to present only files or only applications. In this case, the top area of the list 231 can present a field 233 through which the content ~~[[if]]~~ of the list 231 can be altered. If the list only presents files, then the field 233 can display a representation of a task manager and a selection of the field 233 will cause the list 231 to alter to present only applications, and if the list 231 only presents applications, then the field 233 displays a representation of a file manager and a selection of the field 233 will cause the list 231 to alter and present only files.

Page 7, eighth full paragraph:

Figure 9 shows that if the number of applications and/or files in the list 231 exceeds the number of applications and/or files that can be presented on the display area 3, and if the object 4 is moved to the top or bottom position of the display area, then lifted, replaced on the display area, and then again moved to the top or bottom of the display area, then the content of the display area will be replaced one whole page, meaning that if the object 4 is positioned N at the bottom 3b of the display area 3, then lifted, replaced on the display area 3, and then again moved M to the bottom 3b of the display area 3, then the content 31 of the display area 3 will be replaced P by the following applications and/or files 32 in the list 231. In the same way, but not shown in the figure, if the object is ~~position~~ positioned at the top of the display area, then lifted, replaced on the display area 3, and then again moved to the top of the

display area, the content of the display area will be replaced by the preceding applications and/or files in the list.

Publication No. US 2004/0109013 A1, paragraph [0069]:

As shown in figure 13, the present invention relates to a user interface for a hand held mobile unit that preferably can be manageable with one hand. Hence the present invention teaches that the user interface is adapted to a touch sensitive area 1 with a size that is in the order of 2-3 inches, meaning the diagonal distance W between two corners of the touch sensitive area 1.

IN THE CLAIMS:

Please substitute the following claims for the pending claims with the same number:

1. (currently amended) A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

~~a touch sensitive area that is simultaneously divided into a menu area and a display area, the mobile handheld computer unit being adapted to run several applications simultaneously, and to present an active application on top of any other application on said display area, characterised in, that:~~

~~said menu area simultaneously presents in which representations of a first function that is a general application dependent function, a second function that is a keyboard function, and a third function that is a task and file manager plurality of functions are displayed, and~~

~~each function of said first, second, and third functions simultaneously represented in said menu area plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by the single step of a blunt an object touching the corresponding location and then gliding along the touch sensitive area away from the location moving in a direction from a starting point that is the representation of the corresponding one of said first, second, and third functions in said menu area to said display area being detected by~~

~~said touch sensitive area, thereby allowing low precision navigation of the user interface using the blunt object, so that the user interface can be operated by one hand, where the blunt object is a finger.~~

2. (currently amended) The computer readable medium of claim **1**, wherein one function from the plurality of functions, when ~~the mobile handheld computer unit runs an operating system, the user interface is characterised in, that, if said first function is activated, causes~~ the user interface is adapted to display icons representing different services or settings depending on the current for a currently active application, ~~that one of said icons always represents a "help" service, regardless of application, and that, if no application is current active on the mobile handheld computer unit, said icons are adapted to represent services or settings of the operating system of the mobile handheld computer unit.~~

3. (currently amended) The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a ~~corresponding~~ display icon corresponding to the preferred service or setting.

4. (currently amended) The computer readable medium of claim **1**, wherein ~~the user interface is characterised in,~~

~~—that, if said second~~ one function from the plurality of functions, when ~~[[is]]~~ activated, ~~said display area is adapted~~ causes the user interface to display a keyboard and a text field;

~~—that, if a text passage in said active application is highlighted, said text passage is displayed in said text field for editing~~

~~through said keyboard and that said highlighted text passage is replaced by said edited text passage when said second function is deactivated, and~~
~~—that, if no text passage in said active application is highlighted, said text field is available for inputting and editing of text through said keyboard.~~

5. (currently amended) The computer readable medium of claim **4**, wherein ~~the user interface is characterised in, that if no text passage in said active application is highlighted,~~ said text field is used for inputting and editing of text through said keyboard, then

~~—said first function can be activated, or~~

~~—said second function can be closed, in which a choice of saving or deleting said inputted text is given, where the choice of saving said inputted text results in an activation of said first function, in which said first function will present services or settings available for said inputted text.~~

6. (currently amended) The computer readable medium of claim **1**, wherein ~~the user interface is characterised in, that, if said third one function from the plurality of functions, when ~~[[is]]~~ activated, said display area is adapted causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit; that a selection of an application will start said application, and that a selection of a file will open said file in an application intended for said file.~~

7. (currently amended) The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by ~~moving~~ gliding the ~~blunt~~ object along said

touch sensitive area so that a representation of a desired one of said application or file is highlighted, ~~removing~~ raising said object from said touch sensitive area, and then tapping on said touch sensitive area, ~~and that said desired one of said application or file is highlighted by placing some kind of marking on said representation of said application or file.~~

8. (currently amended) The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list ~~is adapted to present~~ presents only said files or only said applications, and that ~~a top~~ an area of said list presents a field through which ~~the content of~~ said list can be ~~altered~~ changed from presenting files to presenting applications, or from presenting applications to presenting files, that, if said list only presents files, said field displays a representation of a task manager and a selection of said field will cause said list to alter to present only applications, and that, if said list only presents applications, said field displays a representation of a file manager and a selection of said field will cause said list to alter and present only files.

9. (currently amended) The computer readable medium of claim **7**, wherein the user interface is characterised in, that, ~~[[a]]~~ one item in said list is highlighted by a moveable marking, and navigation in said list is ~~performed by moving~~ gliding the blunt object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, ~~that the movement of the blunt object will cause~~ causes said marking to move in the same direction without scrolling the list, ~~and that the speed of movement of said marking is lower than the speed of movement of the blunt object.~~

10. (currently amended) The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications and/or files in said list exceeds the number of ~~application~~ applications ~~[[and]]~~ or files that can be presented on said ~~display~~ touch sensitive area as content, and if the ~~blunt~~ object is ~~moved~~ glided along said touch sensitive area to the top or bottom position of said ~~display~~ touch sensitive area, then ~~lifted~~ raised, replaced on said ~~display~~ touch sensitive area, and again ~~moved~~ glided along said touch sensitive area to the top or bottom of said ~~display~~ touch sensitive area, the content of said ~~display~~ touch sensitive area will be replaced one whole page, ~~meaning that if the blunt object is positioned at the bottom of said display area,~~ replaced on said display area, and then again moved to the bottom of said display area, the content of said display area will be replaced by the following applications and/or files in said list, and if the blunt object is positioned at the top of said display area, then lifted, replaced on said display area, and then again moved to the top of said display area, the content of said display area will be replaced by the preceding applications and/or files in the list.

11. (currently amended) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the ~~blunt~~ object is ~~removed~~ raised from any first position on said ~~display~~ touch sensitive area and then replaced on any second position on said ~~display~~ touch sensitive area, said navigation can be continued from said second position.

12. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application,

function, service or setting is moved on one step by ~~moving~~ gliding the ~~blunt~~ object along the touch sensitive area from the left of ~~said display area~~ to the right of ~~said display area~~, and that the active application, function, service or setting is closed or backed one step by ~~moving~~ gliding the ~~blunt~~ object along the touch sensitive area from the right of ~~said display area~~ to the left of ~~said display area~~.

13. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that said ~~menu area is positioned~~ representations of said plurality of functions are located at the bottom of said touch sensitive area, ~~that said representation of said first function is positioned at the left side of said menu area, that said representation of said second function is positioned at the middle of said menu area, and that said representation of said third function is positioned at the right side of said menu area.~~

14. (currently amended) The computer readable medium of claim **1**, wherein the ~~user interface is characterised in, that said user interface is adapted to a touch sensitive area with a size that is 2-3 inches in diagonal dimension, and that said user interface is adapted to be operated by one hand when the mobile handheld computer unit is held in the one hand, wherein said blunt object is a fleshy part of the thumb of the one hand.~~

15. (currently amended) An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said ~~display~~ touch sensitive area, ~~and that a representation of said menu area is printed on top of said enclosure.~~

16. (previously presented) The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. (previously presented) A computer readable medium, with a computer program product stored therein, characterised in, that said computer program product comprises computer readable code, which, when read by a computer, will make it possible for said computer to present a user interface according to Claim **1**.

18. (original) A computer readable medium according to Claim **17**, characterised in, that said computer program product is adapted to function as a shell upon an operations system.

19. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user, individually at differing times, a plurality of display screens corresponding to said plurality of features and/or services and for allowing the user to navigate among said various differing features and/or services and among said plurality of display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said plurality of features and/or services and among said plurality of display screens, said user interface software configured to:

when said touchscreen is displaying a first display screen of said plurality of display screens, cause said computing

device to display a second display screen of said plurality of display screens in response to a first sweeping movement of the object along said touchscreen in a first direction, said computing device displaying said second display screen after the object has traversed a first predetermined extent of said touchscreen along said first direction; and

when said touchscreen is displaying said second display screen, cause said computing device to display said first display screen in response to a second sweeping movement of the object along said touchscreen in a second direction opposite said first direction, said computing device displaying said first display screen only after the object has traversed a second predetermined extent of said touchscreen along said second direction.

20. (withdrawn) An apparatus according to claim **19**, wherein said touchscreen has a left edge and a right edge when said touchscreen is properly oriented for viewing by the user and said first direction proceeds from a location at or proximate said left edge toward said right edge and said second direction proceeds from a location at or proximate said right edge toward said left edge.

21. (withdrawn) An apparatus according to claim **20**, wherein said touchscreen has a width extending from said left edge to said right edge and each of said first and second extents is substantially equal to said width.

22. (withdrawn) An apparatus according to claim **21**, wherein said touchscreen has a diagonal dimension of two inches to three inches.

23. (withdrawn) An apparatus according to claim **19**, wherein said computing device is sized to be cradled in a hand of an adult human user and so that, when so cradled, all points on said touchscreen are touchable by the thumb of the adult human user, the object being the thumb of the hand.

24. (withdrawn) An apparatus according to claim **19**, wherein each of the first and second sweeping movements does not drag any graphical feature displayed on said touchscreen during that one of the first and second sweeping movements.

25. (withdrawn) An apparatus, comprising:

a computing device configured to provide first and second menu-area functions to a user, said first menu-area function having a first-function display screen and said second menu-area function having a second-function display screen differing from said first-function display screen, said computing device including a user interface that comprises:

a touchscreen simultaneously divided into a menu region and a display region, said menu region containing first and second representations corresponding respectively to said first and second menu-area functions, said display region for displaying to the user at differing times said first-function and second-function display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to select at differing times each of said first and second menu-area functions, said user interface software configured to:

display said first-function display screen in response to a first sweeping movement of the object along said touchscreen, the first sweeping movement starting at said first representation in said menu region and proceeding into said display region; and

display said second-function display screen in response to a second sweeping movement of the object along said touchscreen, the second sweeping movement starting at said second representation in said menu region and proceeding into said display region.

26. (withdrawn) An apparatus according to claim **25**, wherein:

said touchscreen has a first edge and a second edge spaced from said first edge;

said first and second representations are each located proximate said first edge and spaced from one another along said first edge; and

the first and second sweeping movements each proceed in a direction toward said second edge.

27. (withdrawn) An apparatus according to claim **25**, wherein said first-function display screen contains a plurality of icons corresponding respectively to a plurality of applications, said user interface software configured to activate any one of said plurality of applications in response to the user tapping the object on said touchscreen at a corresponding one of said plurality of icons.

28. (withdrawn) An apparatus according to claim **27**, wherein said second-function display screen contains a set of application functions, said set varying as a function of which one of said plurality of applications is active when the user makes the second movement.

29. (withdrawn) An apparatus according to claim **27**, wherein a particular application of said plurality of applications has a plurality of application screen displays, said user interface software configured so that when said particular application is active, the user forwardly steps through said plurality of application screen displays by sweeping the object across said touchscreen in a first direction and reversely steps through said plurality of application screen displays by sweeping the object across said touchscreen in a second direction opposite said first direction.

30. (withdrawn) An apparatus according to claim **25**, wherein said first display screen contains a soft-interface telephony keypad.

31. (withdrawn) An apparatus, comprising:

a computing device configured to run a software application configured to display a plurality of predetermined display screens, said computing device including a user interface that comprises:

a touchscreen for displaying to the user, individually at differing times, said plurality of predetermined display screens and for allowing the user to navigate among said plurality of predetermined display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to

navigate among said plurality of predetermined display screens, said user interface software configured to:

activate said software application in response to a particular interaction of the object with said touchscreen;

forwardly step in series through ones of said plurality of predetermined display screens in response to corresponding respective individual instances of a first sweeping movement of the object along said touchscreen in a first direction; and

reversely step in series through ones of said plurality of predetermined display screens in response to corresponding respective individual instances of a second sweeping movement of the object along said touchscreen in a second direction different from said first direction.

32. (withdrawn) An apparatus according to claim **31**, wherein said particular interaction of the object with said touchscreen to activate said software application is a third sweeping movement of the object along said touchscreen in a third direction different from each of said first and second directions.

33. (withdrawn) An apparatus according to claim **32**, wherein said first and second directions are opposite one another and said third direction is perpendicular to each of said first and second directions.

34. (withdrawn) An apparatus, comprising:

a computing device configured to run software for providing to a user a plurality of services and/or functions, said computing device including:

a touchscreen for display to the user a graphical user interface and for allowing the user to navigate among said plurality of services and/or functions; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said plurality of services and/or functions, said user interface software configured to:

present, in response to a sweeping movement of the object across said touchscreen, a display screen containing a plurality of display icons corresponding respectively to ones of said plurality of services and/or functions, the sweeping movement being spatially uncorrelated with information displayed on said touchscreen; and

when said touchscreen is displaying said plurality of display icons, launch one of said plurality of services and/or functions in response to the user tapping the object on said touchscreen at a location where said touchscreen displays the corresponding one of said plurality of display icons.

35. (withdrawn) An apparatus according to claim **34**, wherein said computing device contains a software application and said user interface is configured to present said plurality of display icons only if said software application is active during the sweeping movement of the object.

36. (withdrawn) An apparatus according to claim **35**, wherein when said software application is active during the sweeping of the object, said display icons correspond to services and/or functions specific to said software application.

37. (withdrawn) An apparatus, comprising:

a computing device containing software for providing to a user a plurality of services and/or functions, said computing device including:

a touchscreen for displaying to the user, individually at differing times, ones of various display screens associated with said plurality of services and/or functions and for allowing the user to navigate among said plurality of display screens so as to provide the user with access to said plurality of services and/or functions and for allowing the user to control functioning of ones of said plurality of services and/or functions; and

user interface software responsive to a set of movements of an object with respect to said touchscreen so as to allow the user to navigate among said plurality of display screens and to control functioning of ones of said plurality of services and/or functions, said set of movements including a plurality of sweeping movements having differing directionalities along said touchscreen, wherein said plurality of sweeping movements being spatially uncorrelated with information displayed on said touchscreen, said user interface software being configured to distinguish the plurality of sweeping movements from one another as a function of the differing directionalities so as to provide differing responses as a function of said differing directionalities.

38. (withdrawn) An apparatus according to claim **37**, wherein two sweeping movements of the plurality of sweeping movements have opposing directionality and said user interface software is configured to provide two opposing responses corresponding respectively to said two sweeping movements.

39. (withdrawn) An apparatus according to claim **38**, wherein one of the two opposing responses is moving forward in a series of display screens and the other of the two opposing responses is moving backward in the series of display screens.

40. (withdrawn) An apparatus according to claim **37**, wherein each of the plurality of sweeping movements does not drag any graphical feature displayed on said touchscreen during that one of the plurality of sweeping movements.

41. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features, settings, applications and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user a list of items corresponding to at least one of a plurality of features, settings, applications and/or services and for allowing the user to select any one of said items using said list; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said list and to select any one of said items, said user interface software configured to move a highlight marking, having a

displayed location on said touchscreen, in a desired direction within said list in response to the user:

(a) contacting said touchscreen with the object at a first location that is a function of the desired direction, not said displayed location of said highlight marking;

(b) while keeping the object in contact with said touchscreen, moving the object along said touchscreen in the desired direction to a second location; and

(c) immediately following said moving of the object along said touchscreen to said second location, lifting the object from said touchscreen so as to establish a new location of said highlight marking.

42. (withdrawn) An apparatus according to claim **41**, wherein said user interface software is configured to, after the user has marked a desired one of said items by performing steps (a) through (c) so as to highlight said desired one with the highlight marking, select said desired one in response to the user tapping the object on said touchscreen without regard to said display location of the highlight marking.

43. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features, settings, applications and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user a list of items corresponding to at least one of said plurality of features, settings, applications and/or services and for allowing the user to select any one of said items using said list; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to scroll said list and to select any one of said plurality items, said user interface software configured to scroll said list in a desired direction in response to the user:

(a) contacting said touchscreen with the object at a first location that is a function of the desired direction of said scroll and that is not based on any soft scroll control displayed on said touchscreen; and

(b) while keeping the object in contact with said touchscreen, moving the object along said touchscreen in the desired direction to a second location, wherein said moving of the object causes said list to scroll in the desired direction.

44. (withdrawn) An apparatus according to claim **43**, wherein said user interface software is configured to activate a selected one of said items in response to a user tapping the object on said touchscreen following the user lifting the object from the touchscreen after the user performs step (b).

45. (withdrawn) An apparatus according to claim **43**, wherein said items are files.

46. (withdrawn) An apparatus according to claim **43**, wherein said items are email messages.

47. (withdrawn) An apparatus according to claim **43**, wherein each item is contact information for a corresponding contact.

REMARKS

Applicant expresses appreciation to the Examiner for the courtesy of an interview granted to applicant's representative Marc A. Berger (Reg. No. 44,029). The interview was held by telephone on Thursday, September 4, 2008. The substance of the interview is contained in the Interview Summary, Form PTOL-413, prepared and entered by the Examiner. Claims **1 - 15** have been amended in accordance with the conclusions of the interview.

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has withdrawn claims **19 - 47**, and amended claims **1 - 15** to properly claim the present invention. No new matter has been added. Claims **1 - 18** are presented for examination.

In paragraphs 1 - 8 of the Office Action, the Examiner has rejected claims **1, 4 - 7, 12, 15** and **17** under 35 U.S.C. §103(a) as being unpatentable over Carlson, F., Visual Quickstart Guide: Palm Organizers ("Carlson") in view of Milic-Frayling et al., US Publication No. 2004/0100510 ("Milic-Frayling"), and further in view of Conrad et al., US Patent No. 5,956,030 ("Conrad").

In paragraph 9 of the Office Action, the Examiner has rejected claims **2** and **3** under 35 U.S.C. §103(a) as being unpatentable over Carlson in view of Milic-Frayling, in view of Conrad, and further in view of Kopitzke et al., US Patent No. 6,988,246 ("Kopitzke").

In paragraph 10 – 13 of the Office Action, the Examiner has rejected claims **8 – 11** under 35 U.S.C. §103(a) as being unpatentable over Carlson in view of Milic-Frayling, in view of Conrad, and further in view of Wynn et al., US Patent No. 6,734,883 (“Wynn”).

In paragraph 14 of the Office Action, the Examiner has rejected claim **13** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Milic-Frayling, and further in view of Conrad.

In paragraphs 15 and 16 of the Office Action, the Examiner has rejected claims **14** and **16** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Milic-Frayling, in view of Conrad, and further in view of Strietelmeier, Palm m100, The Gadgeteer (“Strietelmeier”).

In paragraphs 17 and 18 of the Office Action, the Examiner has rejected claim **18** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Milic-Frayling, in view of Conrad, and further in view of Chew et al., US Patent No. 6,727,917 (“Chew”).

Distinctions between Claimed Invention and Carlson, F., Visual Quickstart Guide: Palm Organizers, US Publication No. 2004/0100510 of Milic-Frayling et al., US Patent No. 5,956,030 to Conrad et al., US Patent No. 6,988,246 to Kopitzke et al., US Patent No. 6,734,883 to Wynn et al., Strietelmeier, Palm m100, The Gadgeteer, and US Patent No. 6,727,917 to Chew et al.

Aspects of the subject invention concern a touch-based user interface with functionalities for running interactive applications using touch-based icons, for inputting text using a touch-based keypad, and for managing files using a touch-based file listing. User inputs include finger taps and thumb movements. One such movement is a

thumb touch-and-glide, where the thumb touches a touch screen at a location where an icon for a function is displayed, and glides along the touch screen away from the location, as illustrated in FIG. 2 of the subject application.

Carlson describes how to use the Palm Organizer touch-based user interface. Through a series of pictures, Carlson shows how to run applications, view documents, access menus, and use an onscreen keyboard.

Milic-Frayling describes an interactive user interface for presenting search results on small display screens of handheld devices. Search results are annotated to highlight search hits, and text is wrapped so as to avoid the need for horizontal scrolling.

Conrad describes a window management system for keeping open windows offscreen in a drawer area (Conrad/ elements D1 – D4 of FIG. 1), and available for popping them back onscreen by clicking on a title bar or drawer handle of the offscreen window (Conrad/ FIGS. 2 – 4). Conrad also describes “spring loaded” enclosures for opening temporary windows for enclosure identifiers, during a drag operation (Conrad/ FIGS. 8A – 8D and 9A – 9E).

Kopitzke describes a touch-sensitive user interface for use in an aircraft with multiple cabin systems. A main menu (Kopitzke/ FIG. 4) provides an overview of cabin status, and information and data regarding the cabin systems. The main menu includes touch input keys for bringing up menus for each of the individual aircraft cabin systems, for monitoring and controlling their operation. Cabin systems include inter alia an audio system (Kopitzke/ FIG. 5), a video system, a lighting system (Kopitzke/ FIG. 6), a climate control system, a doors & hatches

system (Kopitzke/ FIG. 7), a water supply system (Kopitzke/ FIG. 8), an electric power supply system, and a data communication system.

Wynn describes a user interface for spinning through a list of items. The user interface displays a preview list of items and a postview list of items on opposite sides of a currently selected item in the list (Wynn/ FIG. 7).

Strietelmeier describes the mechanical casing, hardware components and software applications of the Palm m100 Organizer, in comparison with the Palm IIIc, the Palm V and the Handspring Visor.

Chew describes a user interface for running and interacting with multiple applications on small handheld device display screens. Chen describes a user interface display having a top portion with a navigation bar (Chew/ element 302 of FIG. 3) for navigating between different applications, a middle portion for graphically displaying outputs of a currently active application, and a bottom portion with an application menu bar (Chew/ element 304 of FIG. 3) for entering inputs to the currently active application.

The touch-based user interface of the subject claimed invention is generally operated by the thumb. The touch-based user interface of Carlson is generally operated by a stylus. Although, the user interface of Carlson may also be operated by the thumb, the natures of the two user interfaces are distinct. The subject claimed invention teaches "rubbing", "touch-and-glide" movements to operate a user interface, whereby the thumb touches a touch-sensitive screen and rubs, or glides, along the screen without lifting the thumb. In distinction, tap movements and one-stroke pen drags are used to operate the touch-based user interface of Carlson. In terms of motor skill, the touch-and-glide movements of the subject claimed invention are akin to pressing

with the thumb on a mechanical slider button, such as the slider button with HI/LO/OFF settings on a hair-dryer handle, and sliding the button up or down while it is pressed.

The touch-and-glide movements of the subject claimed invention are illustrated in FIGS. 2, 7 and 10 by a left-arrow and a thumb touching a touch-sensitive screen.

The touch-and-glide movements of the subject claimed invention are used to activate functions (original specification/ Abstract; page 2, lines 25 – 28; page 5, lines 24 – 27; FIG. 2; original claim **1**), and to scroll a selector forward and backward within a list to select a desired item in the list, and to page up and page down within a list (original specification/ page 3, lines 28 – page 4, line 2; page 7, lines 7 – 10; page 7, line 27 – page 9, line 14; FIGS. 7 and 10; original claims **7, 9** and **10**).

The touch-and-glide movements of the subject claimed invention activate a function located at the touch point. The one-stroke pen drag movement of Carlson activates a pre-designated program, irrespective of where the pen drag begins; namely, the onscreen keyboard or a custom pre-designated program that may be substituted therefor.

Other conventional finger-based touch screens, such as the large touch screens used for self-serve check-in at airport terminals, use touch-sensitive input keys. In distinction, the touch-and-glide inputs of the subject claimed invention are of particular advantage for small handheld devices, where screen space is minimal.

Response to Examiner’s Arguments

In rejecting independent claim **1**, the Examiner has cited the “one-stroke pen drag” (Carlson/ page 30; FIG. 2.22) as teaching that “*any one of said three functions can be activated when said touch sensitive area detects a movement of an object with its starting point within the representation of said function on said menu area and with a direction from said menu area to said display area*”. In rejecting dependent claim **9**, the Examiner has cited dragging a vertical scroll bar (Carlson/ page 27). In rejecting dependent claim **12**, the Examiner has cited dragging a horizontal scroll bar (Carlson/ page 246; FIG. 14.2).

Applicant respectfully submits that the one-stroke drag of Carlson is very distinct from the location-based touch-and-glide movement of the subject invention (original specification/ FIG. 2). The following table summarizes some of the relevant distinctions.

TABLE I: Partial list of distinctions between one-stroke drag of Carlson and location-based touch-and-glide movement of the claimed invention	
One-stroke drag	Location-based touch-and-glide
Default function is the onscreen keyboard; may be customized to activate a different pre-designated function.	The function displayed at the touch point is activated.
At any given time, may be used for activating only one pre-designated function.	At any given time, may be used for activating whichever function is touched, from among a plurality of functions.
The starting location has no bearing on the function that is activated.	The starting location determines which of the plurality of functions is activated.
Performed by a stylus.	Performed by the thumb.
Requires the user interface to recognize a vertical drag.	Requires the user interface to recognize a glide and identify the function displayed at the starting location of the glide.
Requires one hand to hold the device and another hand to perform the stylus movement.	The same hand may be used to hold the device and perform the thumb movement.
Not used for scrolling through a list.	Used for scrolling through a list.

Applicant further respectfully submits that the scroll slider drag of Carlson is very distinct from the location-based touch-and-glide movement of the subject invention. The following table summarizes some of the relevant distinctions.

TABLE II: Partial list of distinctions between scroll slider drag of Carlson and location-based touch-and-glide movement of the claimed invention	
Scroll slider drag	Location-based touch-and-glide
Requires the user interface to recognize a horizontal drag or a vertical drag.	Requires the user interface to recognize a glide in any of a plurality of directions.
Performed by a stylus.	Performed by the thumb.
Requires one hand to hold the device and another hand to perform the stylus movement.	The same hand may be used to hold the device and perform the thumb movement.
Not used for scrolling through a list.	Used for scrolling through a list.

In order to clarify these distinctions, applicant has amended claim **1** to include the limitation of each of the plurality of functions being mapped to a corresponding location in the touch sensitive area, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location.

Applicant has carefully reviewed all of the cited prior art. None of the cited prior art teaches the location-based touch-and-glide thumb movement of the subject claimed invention. Specifically, Milic-Frayling and Conrad do not use touch screens. Kopitzke uses touch input keys. Wynn mentions touch sensitive displays with stylus pens. Strietelmeier mentions writing with a stylus. Chew uses a stylus to tap on a touch screen.

The rejections of the claims **1 – 18** in paragraphs 1 - 18 of the Office Action will now be dealt with specifically.

As to amended independent claim **1** for a computer readable medium, applicant respectfully submits that the limitation in claim **1** of

"each function of said plurality of functions being mapped to a corresponding location in the touch sensitive area at which the representation of the function is displayed, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location"

is neither shown nor suggested in Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier or Chew.

Because claims **2 – 18** depend from claim **1** and include additional features, applicant respectfully submits that claims **2 – 18** are not anticipated or rendered obvious by Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier, Chew, or a combination of Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier and Chew.

Accordingly claims **1 – 18** are deemed to be allowable.

Support for Amended Claims in Original Specification

Independent claim **1** has been amended to include the limitation of each of a plurality of functions being mapped to a corresponding location in a touch sensitive area, and being activated by an object touching the corresponding location and then gliding along the touch sensitive area away from the location. This limitation is supported in the original specification at least at page 2, lines 25 – 28, at page 5, lines 19 – 27, at FIGS. 1, 2, 7 and 10, and in the Abstract.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

Respectfully submitted,

Dated: September 8, 2008

/Marc A. Berger/

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: Neonode AB

Application No./Patent No.: 10/915,250 Filed/Issue Date: December 10, 2002

Entitled: USER INTERFACE

Neonode AB
(Name of Assignee) a corporation
(Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that it is:

- 1. the assignee of the entire right, title, and interest; or
- 2. an assignee of less than the entire right, title and interest
(The extent (by percentage) of its ownership interest is _____ %)

in the patent application/patent identified above by virtue of either:

A. An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.

OR

B. A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: Magnus Goertz To: Neonode Sweden AB
The document was recorded in the United States Patent and Trademark Office at
Reel 018163, Frame 0611, or for which a copy thereof is attached.

2. From: Neonode Sweden AB To: Neonode AB
The document was recorded in the United States Patent and Trademark Office at
Reel 018137, Frame 0448, or for which a copy thereof is attached.

3. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

Additional documents in the chain of title are listed on a supplemental sheet.

As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

(NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08)

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

Dear Examiner Pitaro,

RE: Interview agenda for US Serial No. 10/315,250
USER INTERFACE FOR MOBILE HANDHELD COMPUTER UNIT
Filed on December 10, 2002
In the name of Neonode AB

This letter regards the agenda for our telephone interview, which is scheduled for Thursday, September 4, 2008 at 10:30 AM.

The above referenced application was recently transferred to me, and I am attaching the Power of Attorney I received and mailed to the USPTO.

For the interview, I would like to discuss the attached draft proposed amendment. Specifically, I would like to discuss the touch-and-glide thumb movement, variously referred to as "swiping", "rubbing", "gliding" and "sliding". This movement is described in claim 1 as "an object touching a location in the touch sensitive area at which the representation of the function is displayed and then gliding along the touch sensitive area away from the location."

I understand that you have seen a demonstration of Neonode's touch-sensitive user interface. I believe that the touch-and-glide movement of the claimed invention is different than the input movements disclosed in the cited prior art of Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier and Chew.

www.soquelgroup.com

PAGE 2/39 * RCVD AT 9/3/2008 3:08:58 AM [Eastern Daylight Time] * SVR:USPTO-EFXXRF-6/10 * DNIS:2738300 * CSID:972 8 9315208 * DURATION (mm-ss):05-46

Interview Agenda for US Serial No. 10/315,250

September 3, 2008

The tables provided in the draft response summarize some of the distinguishing features of the touch-and-glide movement. In this regard, I would like to point out the following distinctions.

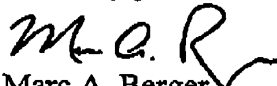

- a. The touch-and-glide movement activates the function displayed at the touch point.
- b. At any given time, the touch-and-glide movement may be used for activating any one of a plurality of different functions.
- c. The touch-and-glide movement may also be used for scrolling up or down through a list.
- d. Processing the touch-and-glide movement requires that the user interface recognize a glide and identify the function displayed at the starting location of the glide.
- e. Processing the touch-and-glide movement requires that the user interface recognize a glide in any of a plurality of directions.
- f. The same hand may be used to hold the device and perform the touch-and-glide thumb movement.

This is what I would like to discuss during our telephone interview.

I am also attaching a clean version of the proposed amended claims, without markings, for ease of reference.

I appreciate your courtesy of granting the interview, and I look forward to speaking with you.

Sincerely yours,

Marc A. Berger

Mail Stop AMENDMENT
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

DRAFT PROPOSED AMENDMENT --
NOT TO BE ENTERED

Sir:

In response to the Office Action dated July 11, 2008,
applicant respectfully requests that the above-identified application be
amended as follows:

IN THE DESCRIPTION:

Please amend the specification as follows.

Page 1, ninth full paragraph:

Since the users have gotten used to small handheld units, it is hard to move towards larger units. This has led to foldable keyboards, different kinds ~~[[if]]~~ of joy sticks and different kinds of touch sensitive displays and pads intended to help in providing a user interface that is suitable for small handheld ~~compute~~ computer units.

Page 2, first full paragraph:

It is a problem to provide a user-friendly interface that is adapted to handle a large amount of information and different kinds of traditional computer-related applications on a small handheld computer unit.

Page 3, sixth full paragraph:

In order to provide a task and file management in a user interface for a handheld mobile computer, the present invention teaches that, if the third function is activated, the display area is adapted to display a list with a library of available applications and files on the computer ~~[[unit]]~~ unit. A selection of an application will start the application, and a selection of a file will open the file in an application intended for the file.

Page 7, fifth full paragraph:

It should ~~[[b]]~~ be understood that all lists in the computer unit, such as a list of contact information in an address book, a

list of e-mail messages in a mailbox, or a telephone log, can be managed in the above described manner.

Page 7, sixth full paragraph:

The list 231 can be adapted to present only files or only applications. In this case, the top area of the list 231 can present a field 233 through which the content [[if]] of the list 231 can be altered. If the list only presents files, then the field 233 can display a representation of a task manager and a selection of the field 233 will cause the list 231 to alter to present only applications, and if the list 231 only presents applications, then the field 233 displays a representation of a file manager and a selection of the field 233 will cause the list 231 to alter and present only files.

Page 7, eighth full paragraph:

Figure 9 shows that if the number of applications and/or files in the list 231 exceeds the number of applications and/or files that can be presented on the display area 3, and if the object 4 is moved to the top or bottom position of the display area, then lifted, replaced on the display area, and then again moved to the top or bottom of the display area, then the content of the display area will be replaced one whole page, meaning that if the object 4 is positioned N at the bottom 3b of the display area 3, then lifted, replaced on the display area 3, and then again moved M to the bottom 3b of the display area 3, then the content 31 of the display area 3 will be replaced P by the following applications and/or files 32 in the list 231. In the same way, but not shown in the figure, if the object is ~~position~~ positioned at the top of the display area, then lifted, replaced on the display area 3, and then again moved to the top of the

display area, the content of the display area will be replaced by the preceding applications and/or files in the list.

Publication No. US 2004/0109013 A1, paragraph [0069]:

As shown in figure 13, the present invention relates to a user interface for a hand held mobile unit that preferably can be manageable with one hand. Hence the present invention teaches that the user interface is adapted to a touch sensitive area 1 with a size that is in the order of 2-3 inches, meaning the diagonal distance *W* between two corners of the touch sensitive area 1.

CENTRAL FAX CENTER**

SEP 03 2008

IN THE CLAIMS:

Please substitute the following claims for the pending claims with the same number:

1. (currently amended) A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising:

~~a touch sensitive area that is simultaneously divided into a menu area and a display area, the mobile handheld computer unit being adapted to run several applications simultaneously, and to present an active application on top of any other application on said display area, characterised in, that:~~

~~said menu area simultaneously presents in which representations of a first function that is a general application dependent function, a second function that is a keyboard function, and a third function that is a task and file manager plurality of functions are displayed, and~~

~~each function of said first, second, and third functions simultaneously represented in said menu area plurality of functions being activated by the single step of a blunt an object touching a location in the touch sensitive area at which the representation of the function is displayed and then gliding along the touch sensitive area away from the location moving in a direction from a starting point that is the representation of the corresponding one of said first, second, and third functions in said menu area to said display area being detected by said touch sensitive area, thereby allowing low precision navigation of the user~~

~~interface using the blunt object, so that the user interface can be operated by one hand, where the blunt object is a finger.~~

2. (currently amended) The computer readable medium of claim 1, wherein one function from the plurality of functions, when the mobile handheld computer unit runs an operating system, the user interface is characterised in, that, if said first function is activated, causes the user interface is adapted to display icons representing different services or settings depending on the current for a currently active application, that one of said icons always represents a "help" service, regardless of application, and that, if no application is current active on the mobile handheld computer unit, said icons are adapted to represent services or settings of the operating system of the mobile handheld computer unit.

3. (currently amended) The computer readable medium of claim 2, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a corresponding display icon corresponding to the preferred service or setting.

4. (currently amended) The computer readable medium of claim 1, wherein ~~the user interface is characterised in,~~

~~that, if said second~~ one function from the plurality of functions, when [[is]] activated, said display area is adapted causes the user interface to display a keyboard and a text field;

~~that, if a text passage in said active application is highlighted, said text passage is displayed in said text field for editing through said keyboard and that said highlighted text passage is replaced by said edited text passage when said second function is deactivated, and~~

~~that, if no text passage in said active application is highlighted, said text field is available for inputting and editing of text through said keyboard.~~

5. (currently amended) The computer readable medium of claim 4, wherein ~~the user interface is characterised in, that if no text passage in said active application is highlighted,~~ said text field is used for inputting and editing of text through said keyboard, then

~~said first function can be activated, or~~

~~said second function can be closed, in which a choice of saving or deleting said inputted text is given, where the choice of saving said inputted text results in an activation of said first function, in which said first function will present services or settings available for said inputted text.~~

6. (currently amended) The computer readable medium of claim 1, wherein ~~the user interface is characterised in, that, if said third~~ one function from the plurality of functions, when ~~[[is]]~~ activated, ~~said display area is adapted~~ causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit, ~~that a selection of an application will start said application, and that a selection of a file will open said file in an application intended for said file.~~

7. (currently amended) The computer readable medium of claim 6, wherein the user interface is characterised in, that a selection of an application or file is done by ~~moving~~ gliding the ~~blunt~~ object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, ~~removing~~ raising said object from said

touch sensitive area, and then tapping on said touch sensitive area, ~~and that said desired one of said application or file is highlighted by placing some kind of marking on said representation of said application or file.~~

8. (currently amended) The computer readable medium of claim 7, wherein the user interface is characterised in, that at any given time said list ~~is adapted to present~~ presents only said files or only said applications, and that ~~a top~~ an area of said list presents a field through which the ~~content of said list can be altered~~ changed from presenting files to presenting applications, or from presenting applications to presenting files, that, if said list only presents files, said field displays a ~~representation of a task manager and a selection of said field will cause said list to alter to present only applications, and that, if said list only presents applications, said field displays a representation of a file manager and a selection of said field will cause said list to alter and present only files.~~

9. (currently amended) The computer readable medium of claim 7, wherein the user interface is characterised in, that, ~~[[a]]~~ navigation in said list is performed by ~~moving~~ gliding the blunt object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list, ~~that the movement of the blunt object will cause said marking to move in the same direction, and that the speed of movement of said marking is lower than the speed of movement of the blunt object.~~

10. (currently amended) The computer readable medium of claim 9, wherein the user interface is characterised in, that, if the number of applications ~~and/or~~ files in said list exceeds the number of application

applications ~~[[and]]~~ or files that can be presented on said ~~display touch sensitive area~~ as content, and if the ~~blunt object is moved~~ glided along said touch sensitive area to the top or bottom position of said ~~display touch sensitive area~~, then ~~lifted~~ raised, replaced on said ~~display touch sensitive area~~, and again ~~moved~~ glided along said touch sensitive area to the top or bottom of said ~~display touch sensitive area~~, the content of said ~~display touch sensitive area~~ will be replaced one whole page, ~~meaning that if the blunt object is positioned at the bottom of said display area, replaced on said display area, and then again moved to the bottom of said display area, the content of said display area will be replaced by the following applications and/or files in said list, and if the blunt object is positioned at the top of said display area, then lifted, replaced on said display area, and then again moved to the top of said display area, the content of said display area will be replaced by the preceding applications and/or files in the list.~~

11. (currently amended) The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the ~~blunt object is removed~~ raised from any first position on said ~~display touch sensitive area~~ and then replaced on any second position on said ~~display touch sensitive area~~, said navigation can be continued from said second position.

12. (currently amended) The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is moved on one step by ~~moving~~ gliding the ~~blunt object along the touch sensitive area~~ from the left of said ~~display area~~ to the right of said ~~display area~~, and that the active application,

function, service or setting is closed or backed one step by ~~moving~~ gliding the ~~blunt~~ object along the touch sensitive area from the right of said display area to the left of said display area,

13. (currently amended) The computer readable medium of claim 1, wherein the user interface is characterised in, that said ~~menu area is positioned~~ representations of said plurality of functions are located at the bottom of said touch sensitive area, ~~that said representation of said first function is positioned at the left side of said menu area, that said representation of said second function is positioned at the middle of said menu area, and that said representation of said third function is positioned at the right side of said menu area.~~

14. (currently amended) The computer readable medium of claim 1, wherein the ~~user interface is characterised in, that said user interface is adapted to a touch sensitive area with a size that is 2-3 inches in diagonal dimension, and that said user interface is adapted to be operated by one hand when the mobile handheld computer unit is held in the one hand, wherein said blunt object is a fleshy part of the thumb of the one hand.~~

15. (currently amended) An enclosure adapted to cover the mobile handheld computer unit according to Claim 1, characterised in, that said enclosure is provided with an opening for said display touch sensitive area, ~~and that a representation of said menu area is printed on top of said enclosure.~~

16. (previously presented) The enclosure according to Claim 15, characterised in, that said enclosure is removable and exchangeable.

17. (previously presented) A computer readable medium, with a computer program product stored therein, characterised in, that said computer program product comprises computer readable code, which, when read by a computer, will make it possible for said computer to present a user interface according to Claim 1.

18. (original) A computer readable medium according to Claim 17, characterised in, that said computer program product is adapted to function as a shell upon an operations system.

19. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user, individually at differing times, a plurality of display screens corresponding to said plurality of features and/or services and for allowing the user to navigate among said various differing features and/or services and among said plurality of display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said plurality of features and/or services and among said plurality of display screens, said user interface software configured to:

when said touchscreen is displaying a first display screen of said plurality of display screens, cause said computing device to display a second display screen of said plurality of display screens in response to a first sweeping movement of the object along said touchscreen in a first direction, said computing device displaying said

second display screen after the object has traversed a first predetermined extent of said touchscreen along said first direction; and

when said touchscreen is displaying said second display screen, cause said computing device to display said first display screen in response to a second sweeping movement of the object along said touchscreen in a second direction opposite said first direction, said computing device displaying said first display screen only after the object has traversed a second predetermined extent of said touchscreen along said second direction.

20. (withdrawn) An apparatus according to claim **19**, wherein said touchscreen has a left edge and a right edge when said touchscreen is properly oriented for viewing by the user and said first direction proceeds from a location at or proximate said left edge toward said right edge and said second direction proceeds from a location at or proximate said right edge toward said left edge.

21. (withdrawn) An apparatus according to claim **20**, wherein said touchscreen has a width extending from said left edge to said right edge and each of said first and second extents is substantially equal to said width.

22. (withdrawn) An apparatus according to claim **21**, wherein said touchscreen has a diagonal dimension of two inches to three inches.

23. (withdrawn) An apparatus according to claim **19**, wherein said computing device is sized to be cradled in a hand of an adult human user and so that, when so cradled, all points on said touchscreen are touchable

by the thumb of the adult human user, the object being the thumb of the hand.

24. (withdrawn) An apparatus according to claim **19**, wherein each of the first and second sweeping movements does not drag any graphical feature displayed on said touchscreen during that one of the first and second sweeping movements.

25. (withdrawn) An apparatus, comprising:

a computing device configured to provide first and second menu-area functions to a user, said first menu-area function having a first-function display screen and said second menu-area function having a second-function display screen differing from said first-function display screen, said computing device including a user interface that comprises:

a touchscreen simultaneously divided into a menu region and a display region, said menu region containing first and second representations corresponding respectively to said first and second menu-area functions, said display region for displaying to the user at differing times said first-function and second-function display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to select at differing times each of said first and second menu-area functions, said user interface software configured to:

display said first-function display screen in response to a first sweeping movement of the object along said touchscreen, the first sweeping movement starting at said first

representation in said menu region and proceeding into said display region; and

display said second-function display screen in response to a second sweeping movement of the object along said touchscreen, the second sweeping movement starting at said second representation in said menu region and proceeding into said display region.

26. (withdrawn) An apparatus according to claim **25**, wherein:

said touchscreen has a first edge and a second edge spaced from said first edge;

said first and second representations are each located proximate said first edge and spaced from one another along said first edge; and

the first and second sweeping movements each proceed in a direction toward said second edge.

27. (withdrawn) An apparatus according to claim **25**, wherein said first-function display screen contains a plurality of icons corresponding respectively to a plurality of applications, said user interface software configured to activate any one of said plurality of applications in response to the user tapping the object on said touchscreen at a corresponding one of said plurality of icons.

28. (withdrawn) An apparatus according to claim **27**, wherein said second-function display screen contains a set of application functions, said set varying as a function of which one of said plurality of applications is active when the user makes the second movement.

29. (withdrawn) An apparatus according to claim **27**, wherein a particular application of said plurality of applications has a plurality of application screen displays, said user interface software configured so that when said particular application is active, the user forwardly steps through said plurality of application screen displays by sweeping the object across said touchscreen in a first direction and reversely steps through said plurality of application screen displays by sweeping the object across said touchscreen in a second direction opposite said first direction.

30. (withdrawn) An apparatus according to claim **25**, wherein said first display screen contains a soft-interface telephony keypad.

31. (withdrawn) An apparatus, comprising:

a computing device configured to run a software application configured to display a plurality of predetermined display screens, said computing device including a user interface that comprises:

a touchscreen for displaying to the user, individually at differing times, said plurality of predetermined display screens and for allowing the user to navigate among said plurality of predetermined display screens; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said plurality of predetermined display screens, said user interface software configured to:

activate said software application in response to a particular interaction of the object with said touchscreen;

forwardly step in series through ones of said plurality of predetermined display screens in response to corresponding respective individual instances of a first sweeping movement of the object along said touchscreen in a first direction; and

reversely step in series through ones of said plurality of predetermined display screens in response to corresponding respective individual instances of a second sweeping movement of the object along said touchscreen in a second direction different from said first direction.

32. (withdrawn) An apparatus according to claim **31**, wherein said particular interaction of the object with said touchscreen to activate said software application is a third sweeping movement of the object along said touchscreen in a third direction different from each of said first and second directions.

33. (withdrawn) An apparatus according to claim **32**, wherein said first and second directions are opposite one another and said third direction is perpendicular to each of said first and second directions.

34. (withdrawn) An apparatus, comprising:

a computing device configured to run software for providing to a user a plurality of services and/or functions, said computing device including:

a touchscreen for display to the user a graphical user interface and for allowing the user to navigate among said plurality of services and/or functions; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said plurality of services and/or functions, said user interface software configured to:

present, in response to a sweeping movement of the object across said touchscreen, a display screen containing a plurality of display icons corresponding respectively to ones of said plurality of services and/or functions, the sweeping movement being spatially uncorrelated with information displayed on said touchscreen; and

when said touchscreen is displaying said plurality of display icons, launch one of said plurality of services and/or functions in response to the user tapping the object on said touchscreen at a location where said touchscreen displays the corresponding one of said plurality of display icons.

35. (withdrawn) An apparatus according to claim **34**, wherein said computing device contains a software application and said user interface is configured to present said plurality of display icons only if said software application is active during the sweeping movement of the object.

36. (withdrawn) An apparatus according to claim **35**, wherein when said software application is active during the sweeping of the object, said display icons correspond to services and/or functions specific to said software application.

37. (withdrawn) An apparatus, comprising:

a computing device containing software for providing to a user a plurality of services and/or functions, said computing device including:

a touchscreen for displaying to the user, individually at differing times, ones of various display screens associated with said plurality of services and/or functions and for allowing the user to navigate among said plurality of display screens so as to provide the user with access to said plurality of services and/or functions and for allowing the user to control functioning of ones of said plurality of services and/or functions; and

user interface software responsive to a set of movements of an object with respect to said touchscreen so as to allow the user to navigate among said plurality of display screens and to control functioning of ones of said plurality of services and/or functions, said set of movements including a plurality of sweeping movements having differing directionalities along said touchscreen, wherein said plurality of sweeping movements being spatially uncorrelated with information displayed on said touchscreen, said user interface software being configured to distinguish the plurality of sweeping movements from one another as a function of the differing directionalities so as to provide differing responses as a function of said differing directionalities.

38. (withdrawn) An apparatus according to claim **37**, wherein two sweeping movements of the plurality of sweeping movements have opposing directionality and said user interface software is configured to provide two opposing responses corresponding respectively to said two sweeping movements.

39. (withdrawn) An apparatus according to claim **38**, wherein one of the two opposing responses is moving forward in a series of display screens and the other of the two opposing responses is moving backward in the series of display screens.

40. (withdrawn) An apparatus according to claim **37**, wherein each of the plurality of sweeping movements does not drag any graphical feature displayed on said touchscreen during that one of the plurality of sweeping movements.

41. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features, settings, applications and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user a list of items corresponding to at least one of a plurality of features, settings, applications and/or services and for allowing the user to select any one of said items using said list; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to navigate among said list and to select any one of said items, said user interface software configured to move a highlight marking, having a displayed location on said touchscreen, in a desired direction within said list in response to the user:

(a) contacting said touchscreen with the object at a first location that is a function of the desired direction, not said displayed location of said highlight marking;

(b) while keeping the object in contact with said touchscreen, moving the object along said touchscreen in the desired direction to a second location; and

(c) Immediately following said moving of the object along said touchscreen to said second location, lifting the object from said touchscreen so as to establish a new location of said highlight marking.

42. (withdrawn) An apparatus according to claim **41**, wherein said user interface software is configured to, after the user has marked a desired one of said items by performing steps (a) through (c) so as to highlight said desired one with the highlight marking, select said desired one in response to the user tapping the object on said touchscreen without regard to said display location of the highlight marking.

43. (withdrawn) An apparatus, comprising:

a computing device configured to provide a plurality of features, settings, applications and/or services to a user, said computing device including a user interface that comprises:

a touchscreen for displaying to the user a list of items corresponding to at least one of said plurality of features, settings, applications and/or services and for allowing the user to select any one of said items using said list; and

user interface software responsive to interaction of an object with said touchscreen so as to allow the user to scroll said list and to select any one of said plurality items, said user interface software configured to scroll said list in a desired direction in response to the user:

(a) contacting said touchscreen with the object at a first location that is a function of the desired direction of said scroll and that is not based on any soft scroll control displayed on said touchscreen; and

(b) while keeping the object in contact with said touchscreen, moving the object along said touchscreen in the desired direction to a second location, wherein said moving of the object causes said list to scroll in the desired direction.

44. (withdrawn) An apparatus according to claim **43**, wherein said user interface software is configured to activate a selected one of said items in response to a user tapping the object on said touchscreen following the user lifting the object from the touchscreen after the user performs step (b).

45. (withdrawn) An apparatus according to claim **43**, wherein said items are files.

46. (withdrawn) An apparatus according to claim **43**, wherein said items are email messages.

47. (withdrawn) An apparatus according to claim **43**, wherein each item is contact information for a corresponding contact.

REMARKS

Applicant has carefully studied the outstanding Office Action. The present amendment is intended to place the application in condition for allowance and is believed to overcome all of the objections and rejections made by the Examiner. Favorable reconsideration and allowance of the application are respectfully requested.

Applicant has withdrawn claims **19 - 47**, and amended claims **1 - 15** to properly claim the present invention. No new matter has been added. Claims **1 - 18** are presented for examination.

In paragraphs 1 - 8 of the Office Action, the Examiner has rejected claims **1, 4 - 7, 12, 15** and **17** under 35 U.S.C. §103(a) as being unpatentable over Carlson, F., Visual Quickstart Guide: Palm Organizers ("Carlson") in view of Millic-Frayling et al., US Publication No. 2004/0100510 ("Millic-Frayling"), and further in view of Conrad et al., US Patent No. 5,956,030 ("Conrad").

In paragraph 9 of the Office Action, the Examiner has rejected claims **2** and **3** under 35 U.S.C. §103(a) as being unpatentable over Carlson in view of Millic-Frayling, in view of Conrad, and further in view of Kopitzke et al., US Patent No. 6,988,246 ("Kopitzke").

In paragraph 10 - 13 of the Office Action, the Examiner has rejected claims **8 - 11** under 35 U.S.C. §103(a) as being unpatentable over Carlson in view of Millic-Frayling, in view of Conrad, and further in view of Wynn et al., US Patent No. 6,734,883 ("Wynn").

In paragraph 14 of the Office Action, the Examiner has rejected claim **13** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Millic-Frayling, and further in view of Conrad.

In paragraphs 15 and 16 of the Office Action, the Examiner has rejected claims **14** and **16** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Milic-Frayling, in view of Conrad, and further in view of Strietelmeier, Palm m100, The Gadgeteer ("Strietelmeier").

In paragraphs 17 and 18 of the Office Action, the Examiner has rejected claim **18** under 35 U.S.C. §103(a) as being unpatentable over Carlson, in view of Milic-Frayling, in view of Conrad, and further in view of Chew et al., US Patent No. 6,727,917 ("Chew").

Distinctions between Claimed Invention and Carlson, F., Visual Quickstart Guide: Palm Organizers, US Publication No. 2004/0100510 of Milic-Frayling et al., US Patent No. 5,956,030 to Conrad et al., US Patent No. 6,988,246 to Kopitzke et al., US Patent No. 6,734,883 to Wynn et al., Strietelmeier, Palm m100, The Gadgeteer, and US Patent No. 6,727,917 to Chew et al.

Aspects of the subject invention concern a touch-based user interface with functionalities for running interactive applications using touch-based icons, for inputting text using a touch-based keypad, and for managing files using a touch-based file listing. User inputs include finger taps and thumb movements. One such movement is a thumb touch-and-glide, where the thumb touches a touch screen at a location where an icon for a function is displayed, and glides along the touch screen away from the location, as illustrated in FIG. 2 of the subject application.

Carlson describes how to use the Palm Organizer touch-based user interface. Through a series of pictures, Carlson shows how to

run applications, view documents, access menus, and use an onscreen keyboard.

Milic-Frayling describes an interactive user interface for presenting search results on small display screens of handheld devices. Search results are annotated to highlight search hits, and text is wrapped so as to avoid the need for horizontal scrolling.

Conrad describes a window management system for keeping open windows offscreen in a drawer area (Conrad/ elements D1 - D4 of FIG. 1), and available for popping them back onscreen by clicking on a title bar or drawer handle of the offscreen window (Conrad/ FIGS. 2 - 4). Conrad also describes "spring loaded" enclosures for opening temporary windows for enclosure identifiers, during a drag operation (Conrad/ FIGS. 8A - 8D and 9A - 9E).

Kopitzke describes a touch-sensitive user interface for use in an aircraft with multiple cabin systems. A main menu (Kopitzke/ FIG. 4) provides an overview of cabin status, and information and data regarding the cabin systems. The main menu includes touch input keys for bringing up menus for each of the individual aircraft cabin systems, for monitoring and controlling their operation. Cabin systems include inter alia an audio system (Kopitzke/ FIG. 5), a video system, a lighting system (Kopitzke/ FIG. 6), a climate control system, a doors & hatches system (Kopitzke/ FIG. 7), a water supply system (Kopitzke/ FIG. 8), an electric power supply system, and a data communication system.

Wynn describes a user interface for spinning through a list of items. The user interface displays a preview list of items and a postview list of items on opposite sides of a currently selected item in the list (Wynn/ FIG. 7).

Strietelmeier describes the mechanical casing, hardware components and software applications of the Palm m100 Organizer, in comparison with the Palm IIIc, the Palm V and the Handspring Visor.

Chew describes a user interface for running and interacting with multiple applications on small handheld device display screens. Chen describes a user interface display having a top portion with a navigation bar (Chew/ element 302 of FIG. 3) for navigating between different applications, a middle portion for graphically displaying outputs of a currently active application, and a bottom portion with an application menu bar (Chew/ element 304 of FIG. 3) for entering inputs to the currently active application.

The touch-based user interface of the subject claimed invention is generally operated by the thumb. The touch-based user interface of Carlson is generally operated by a stylus. Although, the user interface of Carlson may also be operated by the thumb, the natures of the two user interfaces are distinct. The subject claimed invention teaches "rubbing", "touch-and-glide" movements to operate a user interface, whereby the thumb touches a touch-sensitive screen and rubs, or glides, along the screen without lifting the thumb. In distinction, tap movements and one-stroke pen drags are used to operate the touch-based user interface of Carlson. In terms of motor skill, the touch-and-glide movements of the subject claimed invention are akin to pressing with the thumb on a mechanical slider button, such as the slider button with HI/LO/OFF settings on a hair-dryer handle, and sliding the button up or down while it is pressed.

The touch-and-glide movements of the subject claimed invention are illustrated in FIGS. 2, 7 and 10 by a left-arrow and a thumb touching a touch-sensitive screen.

The touch-and-glide movements of the subject claimed invention are used to activate functions (original specification/ Abstract; page 2, lines 25 – 28; page 5, lines 24 – 27; FIG. 2; original claim 1), and to scroll a selector forward and backward within a list to select a desired item in the list, and to page up and page down within a list (original specification/ page 3, lines 28 – page 4, line 2; page 7, lines 7 – 10; page 7, line 27 – page 9, line 14; FIGS. 7 and 10; original claims 7, 9 and 10).

The touch-and-glide movements of the subject claimed invention activate a function located at the touch point. The one-stroke pen drag movement of Carlson activates a pre-designated program, irrespective of where the pen drag begins; namely, the onscreen keyboard or a custom pre-designated program that may be substituted therefor.

Other conventional finger-based touch screens, such as the large touch screens used for self-serve check-in at airport terminals, use touch-sensitive input keys. In distinction, the touch-and-glide inputs of the subject claimed invention are of particular advantage for small handheld devices, where screen space is minimal.

Response to Examiner's Arguments

In rejecting independent claim 1, the Examiner has cited the "one-stroke pen drag" (Carlson/ page 30; FIG. 2.22) as teaching that *"any one of said three functions can be activated when said touch sensitive area detects a movement of an object with its starting point within the representation of said function on said menu area and with a direction from said menu area to said display area"*. In rejecting dependent claim 9, the Examiner has cited dragging a vertical scroll bar

(Carlson/ page 27). In rejecting dependent claim **12**, the Examiner has cited dragging a horizontal scroll bar (Carlson/ page 246; FIG. 14.2).

Applicant respectfully submits that the one-stroke drag of Carlson is very distinct from the location-based touch-and-glide movement of the subject invention (original specification/ FIG. 2). The following table summarizes some of the relevant distinctions.

TABLE I: Partial list of distinctions between one-stroke drag of Carlson and location-based touch-and-glide movement of the claimed invention	
One-stroke drag	Location-based touch-and-glide
Default function is the onscreen keyboard; may be customized to activate a different pre-designated function.	The function displayed at the touch point is activated.
At any given time, may be used for activating only one pre-designated function.	At any given time, may be used for activating whichever function is touched, from among a plurality of functions.
The starting location has no bearing on the function that is activated.	The starting location determines which of the plurality of functions is activated.
Performed by a stylus.	Performed by the thumb.
Requires the user interface to recognize a vertical drag.	Requires the user interface to recognize a glide and identify the function displayed at the starting location of the glide.
Requires one hand to hold the device and another hand to perform the stylus movement.	The same hand may be used to hold the device and perform the thumb movement.
Not used for scrolling through a list.	Used for scrolling through a list.

Applicant further respectfully submits that the scroll slider drag of Carlson is very distinct from the location-based touch-and-glide movement of the subject invention. The following table summarizes some of the relevant distinctions.

TABLE II: Partial list of distinctions between scroll slider drag of Carlson and location-based touch-and-glide movement of the claimed invention	
Scroll slider drag	Location-based touch-and-glide
Requires the user interface to recognize a horizontal drag or a vertical drag.	Requires the user interface to recognize a glide in any of a plurality of directions.
Performed by a stylus.	Performed by the thumb.
Requires one hand to hold the device and another hand to perform the stylus movement.	The same hand may be used to hold the device and perform the thumb movement.
Not used for scrolling through a list.	Used for scrolling through a list.

In order to clarify these distinctions, applicant has amended claim **1** to include the limitation of each function of said plurality of functions being activated by an object touching a location in the touch sensitive area at which the representation of the function is displayed and then gliding the object along the touch sensitive area away from the location.

Applicant has carefully reviewed all of the cited prior art. None of the cited prior art teaches the location-based touch-and-glide thumb movement of the subject claimed invention. Specifically, Milic-Frayling and Conrad do not use touch screens. Kopitzke uses touch input keys. Wynn mentions touch sensitive displays with stylus pens. Strietelmeier mentions writing with a stylus. Chew uses a stylus to tap on a touch screen.

The rejections of the claims **1 - 18** in paragraphs 1 - 18 of the Office Action will now be dealt with specifically.

As to amended independent claim **1** for a computer readable medium, applicant respectfully submits that the limitation in claim **1** of

"each function of said plurality of functions being activated by an object touching a location in the touch sensitive area at

which the representation of the function is displayed and gliding along the touch sensitive area away from the location"

is neither shown nor suggested in Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier or Chew.

Because claims **2 - 18** depend from claim **1** and include additional features, applicant respectfully submits that claims **2 - 18** are not anticipated or rendered obvious by Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier, Chew, or a combination of Carlson, Milic-Frayling, Conrad, Kopitzke, Wynn, Strietelmeier and Chew.

Accordingly claims **1 - 18** are deemed to be allowable.

Support for Amended Claims in Original Specification

Independent claim **1** has been amended to include the limitation of an object touching a location in the touch sensitive area at which the representation of the function is displayed and gliding along the touch sensitive area away from the location. This limitation is supported in the original specification at least at FIGS. 2, 7 and 10.

For the foregoing reasons, applicant respectfully submits that the applicable objections and rejections have been overcome and that the claims are in condition for allowance.

Respectfully submitted,

Dated: _____, 2008

P.O. Box 691
Soquel, CA 95073

Reg. No. 44,029

CLEAN VERSION OF PROPOSED AMENDED CLAIMS
WITHOUT MARKINGS - NOT TO BE ENTERED

1. A computer readable medium storing a computer program with computer program code, which, when read by a mobile handheld computer unit, allows the computer to present a user interface for the mobile handheld computer unit, the user interface comprising a touch sensitive area in which representations of a plurality of functions are displayed, and each function of said plurality of functions being activated by an object touching a location in the touch sensitive area at which the representation of the function is displayed and then gliding along the touch sensitive area away from the location.

2. The computer readable medium of claim **1**, wherein one function from the plurality of functions, when activated, causes the user interface to display icons representing different services or settings for a currently active application.

3. The computer readable medium of claim **2**, wherein the user interface is characterised in, that a selection of a preferred service or setting is done by tapping on a display icon corresponding to the preferred service or setting.

4. The computer readable medium of claim **1**, wherein one function from the plurality of functions, when activated, causes the user interface to display a keyboard and a text field.

5. The computer readable medium of claim **4**, wherein said text field is used for inputting and editing of text through said keyboard.

6. The computer readable medium of claim **1**, wherein one function from the plurality of functions, when activated, causes the user interface to display a list with a library of available applications and files on the mobile handheld computer unit.

7. The computer readable medium of claim **6**, wherein the user interface is characterised in, that a selection of an application or file is done by gliding the object along said touch sensitive area so that a representation of a desired one of said application or file is highlighted, raising said object from said touch sensitive area, and then tapping on said touch sensitive area.

8. The computer readable medium of claim **7**, wherein the user interface is characterised in, that at any given time said list presents only files or only applications, and that a—an area of said list presents a field through which said list can be changed from presenting files to presenting applications, or from presenting applications to presenting files.

9. The computer readable medium of claim **7**, wherein the user interface is characterised in, that, navigation in said list is performed by gliding the object along the touch sensitive area in a direction towards the top of said list or towards the bottom of said list.

10. The computer readable medium of claim **9**, wherein the user interface is characterised in, that, if the number of applications or files in said list exceeds the number of applications or files that can be presented on said touch sensitive area as content, and if the object is glided along said touch sensitive area to the top or bottom position of said touch sensitive area, then raised, replaced on said touch sensitive area, and again glided along said touch sensitive area to the top or bottom of said touch sensitive area, the content of said touch sensitive area will be replaced one whole page.

11. The computer readable medium of claim **10**, wherein the user interface is characterised in, that if the object is raised from any first position on said touch sensitive area and then replaced on any second position on said touch sensitive area, said navigation can be continued from said second position.

12. The computer readable medium of claim **1**, wherein the user interface is characterised in, that an active application, function, service or setting is moved on one step by gliding the object along the touch sensitive area from left to right, and that the active application, function, service or setting is closed or backed one step by gliding the object along the touch sensitive area from right to left.

13. The computer readable medium of claim **1**, wherein the user interface is characterised in, that said representations of said plurality of functions are located at the bottom of said touch sensitive area.

14. The computer readable medium of claim **1**, wherein the touch sensitive area is 2-3 inches in diagonal dimension.

15. An enclosure adapted to cover the mobile handheld computer unit according to Claim **1**, characterised in, that said enclosure is provided with an opening for said touch sensitive area.

16. The enclosure according to Claim **15**, characterised in, that said enclosure is removable and exchangeable.

17. A computer readable medium, with a computer program product stored therein, characterised in, that said computer program product comprises computer readable code, which, when read by a computer, will make it possible for said computer to present a user interface according to Claim **1**.

18. A computer readable medium according to Claim **17**, characterised in, that said computer program product is adapted to function as a shell upon an operations system.

I am the:

Applicant/Inventor.

OR

Assignee of record of the entire interest. See 37 CFR 3.71. Statement under 37 CFR 3.73(b) (Form PTO/SB/90) submitted herewith or filed on _____

SIGNATURE of Applicant or Assignee of Record

Signature		Date	28 August 2008
Name	Per Bystack	Telephone	+46 8 678 1850
Title and Company	CEO, Neenode		

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below.

Total of _____ forms are submitted.

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1460, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1460, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-6189 and select option 2.
