I. Executive Summary

During the last decade, mobile communications industry leaped up on centre stage to become one of the biggest and fastest growing technology sectors of all times. Yet, with over 1,3 billion active users worldwide and over 405 million mobile phones sold in 2002¹, the mobile industry is still considered by many to be in its early stages of development.

From an industry perspective, the key driving forces behind this exceptional growth has been *rapid technological innovation* and *proprietary solutions*. Equipment manufacturers, such as Ericsson, Nokia and Motorola, have been able to seize leadership positions by investing heavily in high-margin, proprietary solutions and integrating the whole value chain by supplying infrastructure, handsets and key applications.

But the mobile communications industry's exclusive focus on developing proprietary technology and the lack of a dominant design is currently slowing down the growth and development of new applications and services. In the battle for new customers and market leadership, new technology is being developed to give mobile phones access to information, applications and services already available on the World Wide Web. This has captured the attention of thousands of hardware and software companies active in the PC industry that see a tremendous opportunity for growth in supplying hardware, software, services and content to their customers' mobile handsets.

From a customer perspective, there is a whole new generation of tech-savvy end-users that have grown up during the 1980's and 1990's with the evolution of the PC and the World Wide Web (and is currently driving the market growth in the mobile communications industry). These end-users, aged 13 – 25, see the mobile phone as something more than an advanced "cordless phone" – it is a multi-purpose information and communication device that can be used to play games, listen to music, surf the web and communicate with others – just like they do on their PC at home.

This opens up a whole new world of opportunities to current and future leaders in the mobile communications industry. To satisfy the demands of a young and tech-savvy generation of mobile users, the future market leaders in the mobile communications industry must:

- a) be able to deliver mobile communications devices that give its owner unprecedented freedom in the customization and personalization of their mobile handset to fit and reflect their individual lifestyles
- b) develop new mobile communications devices that support the tremendous variety of features and applications that can be found in the PC and on the World Wide Web.

To effectively seize this market opportunity, Magnus Goertz and Thomas Eriksson sat down to analyze and identify the technology, market focus, core competencies and competitive advantages needed to seize a leadership position in this rapidly emerging industry. Their research and analysis led to the founding of Neonode AB in June of 2000, a limited-liability corporation based in Kista, a few miles north of Stockholm, Sweden.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
