The sign of Interoperability

CAN I CHARGE MY WIRELESS TOOTHBRUSH WITH THE CHARGER FOR THE PHONE?

Today that is unlikely. Each product comes with its own wireless charger. We got rid of the last wire, but created a jungle of incompatible charging stations. This can't be right!

WE NEED COMPATIBLE CHARGERS

We all love wireless products but hesitate to stuff our desks and homes with incompatible charging stations. We demand that our charging station will work with products from many companies, and will work with next year's products as well.

The Wireless Power Consortium

A STANDARD FOR WIRELESS POWER

The Wireless Power Consortium will set an international standard for compatible wireless charging stations. Compatible products will be recognized by a logo. Phones, cameras, remote controls, and all mobile electronics carrying the logo will work with all charging stations that carry the logo. Simple and obvious.
