How it Works

Enjoying the freedom and convenience of charging without plugging and unplugging and the tangle of wires is simple!

Upgrade your favorite gear with a Powermat Receiver or use the Powercube Universal Receiver. The Powercube works with hundreds of devices and is the perfect accessory for your Powermat.

Then choose a Mat. With many Mats to choose from, you can select the one that is right for your charging needs.

Charging your favorite devices is now as easy as setting them down!

The Powermat System

Wireless Charging

The Powermat Wireless Charging System provides a simple, fast and efficient way to keep all of your favorite personal electronic devices charged. Enabling your devices with Powermat Receivers allows you to Drop and Charge them on any Powermat Mat to experience wireless charging.

Magnetic Alignment

A magnetic attraction between every Receiver and each access point on every Mat assures that alignment is precise and the most efficient charging will occur.

RFID Handshake

Communication between the Mat and the Receiver allows the mat to deliver an exact amount of power for the proper length of time so that the transfer of power is safe and efficient and no energy is ever wasted.

Audio Confirmation

A unique sound tells you that a solid connection has been made and your device is charging. A second, similar sound is heard when the device is removed.

Charging Light Indication

Each access point has a corresponding light indicator that informs you that wireless charging is occurring.

Auto Shut Off

When a device reaches full charge, power is shut off to that device. This not only saves energy, but it also prevents overcharging of the device's battery, which can shorten battery life.

Full Charge Check

Once full power is achieved and the Auto Shut Off has occurred to save energy and avoid overcharging the device's battery, the system will monitor the status of the battery.

Industrial Design - Mats

Powermat Mats are designed to work in a wide range of locations and environments. Whether you are looking to charge a single device on an end table or night stand, multiple devices on a desk or countertop or take the ultimate in convenient charging with you on the road, there is a Powermat solution that is right for you and your needs.

Industrial Design - Receivers

Powermat Receivers are designed to perfectly integrate onto or into the devices they will enable to charge wirelessly.
