Demonstratives of Patent Owner GUI Global Products, Ltd.

Hearing Date: May 19, 2022

Lee's inductive charging, especially the "dual" coil inductive charging, is not a suitable alternative to Gundlach's conductive

Petitioner uses hindsight to combine Lee's Fig. 12 dual purpose transducer coil embodiment to create a reason for Gundlach's clamshell case (which protects Gundlach's design). The result is a combination that is highly undesirable and violates Gundlach's design goals, requiring larger size and weight, and with its increased cost and complexity.

The testimony of Gwee's expert, Dr. Toliyat, whose vast expertise in the area of wireless charging technology, contravenes, debunks and outweighs any alleged motions to combine proffered by Lee.

Petitioner's new theories, each made for the first time in its Reply, as well as new evidence, in an effort to rebut Dr. Toliyat's reasoned analysis. These new theories and evidence are prejudicial in a Reply, and they should be disregarded.

Gundlach requires a highly compact form factor for storing and charging the headset and case/cradle using

[0002] The present invention relates to a device that when in a first configuration, such as when expanded, becomes a wireless mono or stereo headset and when in a second configuration, such as when collapsed, stores and charges in a host device such as a laptop computer or cell phone.

[0006] Most portable and handheld computers have expansion slots built-in such as the ExpressCard™ or PC Card slots. The slots may conform to form and protocol standards that may allow third party vendors to create interchangeable accessory devices. Expansion cards may allow the user to increase a device's memory or add different types of communication interfaces. Due to the rise in popularity of the USB interface and the subsequent migration of the accessory market to that interface, most PC card slots sit empty in laptops. Many slots have power that can be used to charge battery operated devices as well as high speed communications buses to interchange data.

[0007] An aspect of the present disclosure relates to a wireless device. The wireless device may include a housing, a microphone, a transceiver, and a speaker which directs sound through an earpiece movably affixed to said housing, wherein at least a portion of the earpiece may be configured to fit within a user's ear. In addition, the wireless device may have a physical envelope which may be defined by a length, width and thickness and the earpiece, in an expanded configuration, may be capable of expanding the physical envelope in at least one direction. In another aspect of the present disclosure, the wireless device may also assume a form factor of a card capable of being inserted into a host device.

[0056] In an exemplary embodiment the device may include an articulating ear piece that when expanded may fit over the ear. When collapsed the earpiece may be situated in a plane with the housing of the headset creating a profile with a thickness of, e.g., about 5 mm or less. The relative shape may allow the headset to be stored and charged in a portable cradle or with a mini USB charger. The portable cradle may be a holder, clip, case or card that may fit into a standard expansion slot conforming to any expansion slot standard including, for example, PCMCIA, ExpressCard, and ExpressCard34, etc. Additionally a unique slot or opening may be designed into a laptop or cell phone or any other communication device that may utilize a speaker and microphone to accommodate such as a wireless headset.

[0057] Expanding on the above, the overall size and form factor of the headset may be designed to accommodate or fit into the form factor of a standard expansion slot. For example, the device itself may be 24 mm×60 mm×5 mm when folded for storage purposes. A 34 mm×75 mm×5 mm headset may be provided which may accommodate and fit within the size of a standard Expresscard 34 card. Such device may fit into the 34 mm Expresscard slot for storage and charging inside a portable computer. Once again, it should be appreciated that different form factors are also contemplated and may include the ExpressCard 54 or PCMCIA form factors as a form factor that may be later specifically developed for such a wireless device. Furthermore, the device itself may be relatively light in weight. An exemplary device may weigh less than 20 grams and in certain embodiments, less than 10 grams.

The Petition advanced a specific configuration for an alleged Gundlach system, including the geometry of the devices depicted in the asserted “system”

For example, the Petition states and depicts the following:

In the embodiment of Figures 18a-18b (below), Gundlach’s *system* includes a wireless headset stored in a clamshell charging case. (APPLE-1005, [0080].) This pair of devices that operate together to implement predetermined functionality—e.g., charging and storing—is consistent with a POSITA’s understanding of a *system*. (APPLE-1003, ¶47 (citing APPLE-1025; APPLE-1026).)

Gundlach-Lee satisfies [1a]. Gundlach, for example, provides a portable charging case (*portable switching device*) coupled to a wireless headset (*portable electronic device*). (APPLE-1003, ¶48.)

Pet., 7.

The wireless headset depicted, described and relied upon in the Petition is depicted in Gundlach. *E.g.*, Ex. 1005, Figs. 1, 2a-f, 3a-b, 4a-b, 5a-b, 6a-d, 14a-b, 17b-c, and 18a-b; Pet., *passim*.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
