However, the Thevenin resistance of any termination must be no less than 900

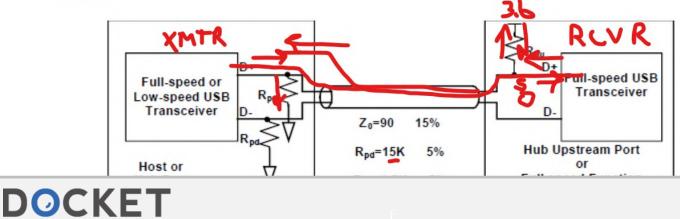

Α

R

Μ

Note: Thevenin resistance of termination does not include the 15 k 5% resistor on host/hub.

The voltage source on the pull-up resistor must be derived from or controlled by the power supplied on the USB cable such that when VBUS is removed, the pull-up resistor does not supply current on the data line to which it is attached.
