PETITION FEE

The petition fee required by 37 CFR 1.17(m) (Fee Code 1558 /2558) must be paid as a condition of accepting unintentionally delayed payment of the maintenance fee.

MAINTENANCE FEE (37 CFR 1.20(e)-(g))

The appropriate maintenance fee must be submitted with this petition.

STATEMENT

THE UNDERSIGNED CERTIFIES THAT THE DELAY IN PAYMENT OF THE MAINTENANCE FEE TO THIS PATENT WAS UNINTENTIONAL

PETITIONER(S) REQUEST THAT THE DELAYED PAYMENT OF THE MAINTENANCE FEE BE ACCEPTED AND THE PATENT REINSTATED

THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES

37 CFR 1.378(c) states: "Any petition under this section must be signed in compliance with 37 CFR 1.33(b)."

I certify, in accordance with 37 CFR 1.4(d)(4) that I am

- An attorney or agent registered to practice before the Patent and Trademark Office
- A sole patentee
- A joint patentee; I certify that I am authorized to sign this submission on behalf of all the other patentees as evidenced by the power of attorney in the application
- A joint patentee; all of whom are signing this e-petition
- The assignee of record of the entire interest that qualifies as an authorized party under 37 CFR 1.33(b)

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays valid OMB control number.

Patent Practitioner

A signature of the applicant or representative is required in accordance with 37 CFR 1.33 and 10.18. Please see 37 CFR 1.4(d) for the form of the signature

Signature	/alan r loudermilk/	Date (YYYY-MM-DD)	2017-09-29
Name	Alan R Loudermilk	Registration Number	32788

This collection of information is required by 37 CFR 1.378(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **This form can only be used when in conjunction with EFS-Web. If this form is mailed to the USPTO, it may cause delays in reinstating the patent.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

In re Patent No. 8458784 :
Issue Date: June 4, 2013 :
Application No. 12807641 :DECISION GRANTING PETITION
Filed: September 10, 2010 :UNDER 37 CFR 1.378(b)
Attorney Docket No. 802-001C :

This is a decision on the electronic petition, filed September 29, 2017, under 37 CFR 1.378(b) to accept the unintentionally delayed payment of the 3.5 year maintenance fee for the above-identified patent.

The petition is **GRANTED**.

The maintenance fee is accepted, and the above-identified patent reinstated as of September 29, 2017. This decision also constitutes notice that the fee has been accepted. An electronic copy of the petition and this decision has been created as an entry in the Image File Wrapper. Nevertheless, petitioner should print and retain an independent copy.

Telephone inquiries related to this electronic decision should be directed to the Electronic Business Center at 1-866-217-9197.

-------------------------------------	--------

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

DATA PROTECTION SYSTEM SELECTIVELY ALTERING AN END PORTION OF PACKETS
BASED ON INCOMPLETE DETERMINATION OF WHETHER A PACKET IS VALID OR INVALID

Preliminary Class

726

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications:**PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES**

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. Response to Rule 312 Communication	Application No. 12/807,641	Applicant(s) KRUMEL, ANDREW K.
	Examiner MICHAEL SIMITOSKI	Art Unit 2493

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

1. The amendment filed on 22 April 2013 under 37 CFR 1.312 has been considered, and has been:
- a) entered.
 - b) entered as directed to matters of form not affecting the scope of the invention.
 - c) disapproved because the amendment was filed after the payment of the issue fee.
Any amendment filed after the date the issue fee is paid must be accompanied by a petition under 37 CFR 1.313(c)(1) and the required fee to withdraw the application from issue.
 - d) disapproved. See explanation below.
 - e) entered in part. See explanation below.

PART B - FEE(S) TRANSMITTAL

1Fu/\$

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

107299 7590 01/18/2013 Alan R. Loudermilk 511 N. Washington Ave Marshall, TX 75670

Certificate of Mailing or Transmission I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

AMENDMENT PURSUANT TO RULE 312

Sir:

In response to the notice of allowance mailed January 18, 2013, please re-examine the above-identified application in view of the following amendment and remarks. The issue fee transmittal accompanies this submission.

IN THE TITLE:

Please change the title to:

--DATA PROTECTION SYSTEM SELECTIVELY ALTERING AN END PORTION OF
PACKETS BASED ON INCOMPLETE DETERMINATION OF WHETHER A PACKET IS
VALID OR INVALID--.

REMARKS

All claims are allowed. Herein Applicant is amending the title consistent with the allowed subject matter. Entry of this amendment is requested.

Please contact the undersigned if there are any questions.

No new matter has been added.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

Alan R. Loudermilk

ART UNIT PAPER NUMBER

2493

DATE MAILED: 01/18/2013

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.

12/807,641 09/10/2010 Andrew K. Krumel 802-001C 3474

TITLE OF INVENTION: REAL TIME FIREWALL/DATA PROTECTION SYSTEMS AND METHODS

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

nonprovisional YES \$885 \$300 \$0 \$1185 04/18/2013

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
 Commissioner for Patents
 P.O. Box 1450
 Alexandria, Virginia 22313-1450
 or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

2493

DATE MAILED: 01/18/2013

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No.	Applicant(s)	
	12/807,641	KRUMEL, ANDREW K.	
	Examiner	Art Unit	
	MICHAEL SIMITOSKI	2493	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to Applicant's response of 12/27/2012.
2. An election was made by the applicant in response to a restriction requirement set forth during the interview on ____; the restriction requirement and election have been incorporated into this action.
3. The allowed claim(s) is/are 97-132. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.
4. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some* c) None of the:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. ____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: ____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.

THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date ____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

TERMINAL DISCLAIMER

Sir:

The undersigned represents that he is the Attorney of record for Application Serial No. 12/807,641.

The owner, 802 Systems, Inc., of the entire right, title and interest in U.S. Patent No(s). 7,013,482 (the "Disclaimed Patent(s)"), and in the above-captioned Application No. 12/807,641, hereby disclaim, except as provided below, the terminal part of the statutory term of any patent granted on the instant application, which would extend beyond the expiration date of the full statutory term defined in 35 U.S.C. 154 and 173, as presently shortened by any terminal disclaimer, of the Disclaimed Patent(s).

The owners hereby agree that any patent so granted on the instant application shall be enforceable only for and during such period that it and the Disclaimed Patent(s) are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owners do not disclaim the terminal part of any patent granted on the instant application that would extend to the expiration date of the full statutory term as defined in 35 U.S.C. 154 and 173 of the Disclaimed Patent(s), as presently

AMENDMENT AFTER FINAL REJECTION

Sir:

In response to the final office action mailed July 27, 2012, please re-examine the above-identified application in view of the following amendment and remarks. A petition for extension of time accompanies this submission and is hereby requested.

IN THE CLAIMS:

1 – 96. (canceled)

97. (previously presented) A data protection system for filtering packets between at least an internet network and an internal network, wherein data is transmitted and received in the form of a plurality of packets, comprising:

a first interface circuit for coupling packets to and from the internet network;

a second interface circuit for coupling packets to and from the internal network;

a filtering circuit coupled between the first interface circuit and the second interface circuit;

wherein, as a packet is being received and transmitted between the first and second interface circuits, the packet is simultaneously subjected to one or more filtering criteria by the filtering circuit, wherein an end portion of the packet is selectively altered by the filtering circuit based on the filtering criteria, wherein the packet is selectively altered to be invalid if a determination has not been made as to whether the packet is valid or invalid by the time the end portion of the packet is received.

98. (previously presented) The system of claim 97, wherein the filtering criteria determine whether the packet is to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

99. (previously presented) The system of claim 97, wherein the filtering circuit includes at least first logic for determining characteristics of the packet being received and transmitted between the first and second interface circuits and at least a filter portion that subjects the packet to the plurality of filtering criteria while the packet is being received and transmitted between the first and second interface circuits.

100. (previously presented) The system of claim 99, wherein the filter portion includes at least a stateful filter portion and a non-stateful filter portion.

101. (previously presented) The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion and the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

102. (previously presented) The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion while the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

103. (previously presented) The system of claim 100, wherein a result aggregator logic receives one or more signals from the stateful filter portion and the non-stateful filter portion, wherein based on the received signals the result aggregator logic controls whether the packet is selectively altered to be invalid.

104. (previously presented) The system of claim 103, wherein the result aggregator logic receives a completion signal that indicates whether the stateful and/or non-stateful filter portions have subjected the packet to all of the filtering criteria.

105. (currently amended) The system of claim 104, wherein ~~if the completion signal is not received by the result aggregator logic by a time when the end portion of the packet has been received, then~~ the packet is selectively altered by the filtering circuit to be invalid in response to the completion signal not being received by the result aggregator logic by a time when the end portion of the packet has been received.

106. (currently amended) The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in parallel with the packet being received and transmitted between the first and second interface circuits ~~, wherein a decision is made whether to selectively alter the packet to be invalid by a time when the end portion of the packet has been received.~~

107. (previously presented) The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in real time with the packet being received and transmitted between the first and second interface circuits.

108. (previously presented) The system of claim 97, further comprising one or more physical switches, wherein the packet is selectively subjected to the filtering criteria based on the state of the one or more physical switches.

109. (previously presented) The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria.

110. (previously presented) The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria based on whether a computer coupled to the internal network is controlled to operate in a client mode or a server mode.

111. (previously presented) The system of claim 108, wherein the state of the one or more physical switches selectively controls a configuration or reconfiguration operation of the

filtering circuit.

112. (previously presented) The system of claim 108, wherein the state of the one or more physical switches selectively controls a reset operation of the filtering circuit.

113. (currently amended) The system of claim ~~97~~ ~~34~~, further comprising one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of the system.

114. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is powered or operational.

115. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is subjecting a packet to the filtering criteria.

116. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system has rejected one or more packets.

117. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that a computer coupled to the internal network is suspected to be under attack.

118. (previously presented) The system of claim 117, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

119. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system until the one or more visual or audio feedback devices are reset by a user.

120. (previously presented) The system of claim 119, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

121. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system.

122. (previously presented) The system of claim 121, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system.

123. (previously presented) The system of claim 121, wherein the light source is controlled to selectively blink depending on the operation or status of the system.

124. (previously presented) The system of claim 123, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on a computer coupled to the internal network.

125. (previously presented) The system of claim 121, wherein the at least one light source comprises an LED.

126. (previously presented) The system of claim 113, wherein the one or more visual or audio feedback devices comprise a speaker.

127. (previously presented) The system of claim 102, wherein the stateful filtering criteria are dependent upon physical switch position, packet characteristics, clock time and/or user-specified criteria.

128. (previously presented) The system of claim 127, wherein the user-specified criteria are entered via a physical input device.

129. (previously presented) The system of claim 128, wherein the physical input device comprises one or more switches, an audio input device, or display input device.

130. (previously presented) The system of claim 127, wherein the user specified criteria are entered via a configuration software.

131. (previously presented) The system of claim 130, wherein the user specified criteria are transferred from the configuration software to the system using a network protocol, infrared port or cable attachment.

132. (previously presented) The system of claim 129, wherein the one or more switches comprise a toggle switch, button switch or multi-state switch.

DEC 27 2012

REMARKS

Claims 97 - 132 were examined and finally rejected on the basis of Section 112 and obviousness-type double patenting. Herein, Applicant is amending claims 105, 106 and 113 to address the informalities noted by the Examiner, and accordingly Applicant requests that the Section 112 rejections be withdrawn. Applicant further is submitting herewith a terminal disclaimer, which should obviate the double patenting rejection.

As the claims have been determined to be allowable over the cited art, no additional searching should be required by this amendment. Accordingly, entry of this amendment is requested, as is allowance of the presently pending claims.

Please contact the undersigned if there are any questions.

No new matter has been added. Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

Alan R. Loudermilk

EXAMINER

SIMITOSKI, MICHAEL J

ART UNIT	PAPER NUMBER
----------	--------------

2439

MAIL DATE	DELIVERY MODE
-----------	---------------

07/27/2012 PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 12/807,641	Applicant(s) KRUMEL, ANDREW K.	
	Examiner MICHAEL SIMITOSKI	Art Unit 2439	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.

- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.

- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 09 July 2012.

2a) This action is **FINAL**. 2b) This action is non-final.

3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

5) Claim(s) 97-132 is/are pending in the application.
5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6) Claim(s) _____ is/are allowed.

7) Claim(s) 97-132 is/are rejected.

8) Claim(s) _____ is/are objected to.

9) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

10) The specification is objected to by the Examiner.

11) The drawing(s) filed on 10 September 2010 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

12) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413)
2) Notice of Draftsperson's Patent Drawing Review (PTO-948) Paper No(s)/Mail Date. _____ .
3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____ . 5) Notice of Informal Patent Application
6) Other: _____ .

DETAILED ACTION

1. The response of 7/9/12 was received and considered.
2. Claims 97-132 are pending.

Response to Arguments

3. Applicant's arguments with respect to claims 97-132 have been considered but are moot because the arguments do not apply to any of the claims discussed in the current rejection.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 105-106 and 113-126 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. Regarding claim 105, the claim is directed to a system, but begins with "if the completion signal...". However, it is unclear how a system limitation could be conditional.
 - b. Regarding claim 106, the claim recites "wherein the packet ... wherein a decision is made...". However, this appears to be an implementation/runtime limitation, not associated with or further limiting the system. Further, the independent claim recites that the packet is found to be invalid if a decision is not made by the time the end portion of the packet is received. In this claim, a recitation that the decision is made by that time. Therefore, such a limitation would seemingly broaden the scope of the parent claim. As such, the claim is indefinite.
 - c. Regarding claim 113, the claim depends from a canceled claim.

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 97-132 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 31-66 of U.S. Patent No. 7,013,482. Although the conflicting claims are not identical, they are not patentably distinct from each other because (in claim 1 of the patent, as compared to claim 31 of the instant application), the removal of any limitations from the patent is obvious

Art Unit: 2439

for reasons of breadth. Further, expanding the scope of “programmable logic device” to “filtering circuit” is an obvious variation for reasons of breadth. Lastly, as the Internet is the best known external network in the art, replacing “external network” with “internet network” is an obvious variation.

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **MICHAEL J. SIMITOSKI** whose telephone number is (571)272-3841. The examiner can normally be reached on Monday - Thursday, 6:45 a.m. - 4:15 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edan Orgad can be reached on (571)272-7884. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2439

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

RESPONSE TO NOTICE TO NON-COMPLIANT AMENDMENT

Sir:

In response to the notice of non-compliant amendment mailed June 21, 2012, Applicant is resubmitting the claims portion of the amendment with the claim identifier added. To the extent required, Applicant requests a one-month extension of time and that the fee be charged to Dep. Account 50-0251.

Please contact the undersigned if there are any questions.

No new matter has been added. Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

I hereby certify that the foregoing is being deposited with the US postal service, postal prepaid, or faxed, to Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on the date indicated above.

07/10/2012 SDIRETA1 00000003 500251 12807641
01 FC:2251 75.00 DA

IN THE CLAIMS:

1 – 96. (canceled)

97. (new) A data protection system for filtering packets between at least an internet network and an internal network, wherein data is transmitted and received in the form of a plurality of packets, comprising:

a first interface circuit for coupling packets to and from the internet network;

a second interface circuit for coupling packets to and from the internal network;

a filtering circuit coupled between the first interface circuit and the second interface circuit;

wherein, as a packet is being received and transmitted between the first and second interface circuits, the packet is simultaneously subjected to one or more filtering criteria by the filtering circuit, wherein an end portion of the packet is selectively altered by the filtering circuit based on the filtering criteria, wherein the packet is selectively altered to be invalid if a determination has not been made as to whether the packet is valid or invalid by the time the end portion of the packet is received.

98. (new) The system of claim 97, wherein the filtering criteria determine whether the packet is to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

99. (new) The system of claim 97, wherein the filtering circuit includes at least first logic for determining characteristics of the packet being received and transmitted between the first and second interface circuits and at least a filter portion that subjects the packet to the plurality of filtering criteria while the packet is being received and transmitted between the first and second interface circuits.

100. (new) The system of claim 99, wherein the filter portion includes at least a stateful filter portion and a non-stateful filter portion.

101. (new) The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion and the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

102. (new) The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion while the non-stateful filter portion subjects the

packet to one or more non-stateful filtering criterion.

103. (new) The system of claim 100, wherein a result aggregator logic receives one or more signals from the stateful filter portion and the non-stateful filter portion, wherein based on the received signals the result aggregator logic controls whether the packet is selectively altered to be invalid.

104. (new) The system of claim 103, wherein the result aggregator logic receives a completion signal that indicates whether the stateful and/or non-stateful filter portions have subjected the packet to all of the filtering criteria.

105. (new) The system of claim 104, wherein, if the completion signal is not received by the result aggregator logic by a time when the end portion of the packet has been received, then the packet is selectively altered by the filtering circuit to be invalid.

106. (new) The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in parallel with the packet being received and transmitted between the first and second interface circuits, wherein a decision is made whether to selectively alter the packet to be invalid by a time when the end portion of the packet has been received.

107. (new) The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in real time with the packet being received and transmitted between the first and second interface circuits.

108. (new) The system of claim 97, further comprising one or more physical switches, wherein the packet is selectively subjected to the filtering criteria based on the state of the one or more physical switches.

109. (new) The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria.

110. (new) The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria based on whether a computer coupled to the internal network is controlled to operate in a client mode or a server mode.

111. (new) The system of claim 108, wherein the state of the one or more physical switches selectively controls a configuration or reconfiguration operation of the filtering circuit.

112. (new) The system of claim 108, wherein the state of the one or more physical

switches selectively controls a reset operation of the filtering circuit.

113. (new) The system of claim 31, further comprising one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of the system.

114. (new) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is powered or operational.

115. (new) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is subjecting a packet to the filtering criteria.

116. (new) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system has rejected one or more packets.

117. (new) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that a computer coupled to the internal network is suspected to be under attack.

118. (new) The system of claim 117, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

119. (new) The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system until the one or more visual or audio feedback devices are reset by a user.

120. (new) The system of claim 119, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

121. (new) The system of claim 113, wherein the one or more visual or audio feedback devices comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system.

122. (new) The system of claim 121, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system.

123. (new) The system of claim 121, wherein the light source is controlled to selectively blink depending on the operation or status of the system.

124. (new) The system of claim 123, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on a computer coupled to

the internal network.

125. (new) The system of claim 121, wherein the at least one light source comprises an LED.

126. (new) The system of claim 113, wherein the one or more visual or audio feedback devices comprise a speaker.

127. (new) The system of claim 102, wherein the stateful filtering criteria are dependent upon physical switch position, packet characteristics, clock time and/or user-specified criteria.

128. (new) The system of claim 127, wherein the user-specified criteria are entered via a physical input device.

129. (new) The system of claim 128, wherein the physical input device comprises one or more switches, an audio input device, or display input device.

130. (new) The system of claim 127, wherein the user specified criteria are entered via a configuration software.

131. (new) The system of claim 130, wherein the user specified criteria are transferred from the configuration software to the system using a network protocol, infrared port or cable attachment.

132. (new) The system of claim 129, wherein the one or more switches comprise a toggle switch, button switch or multi-state switch.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Paper No.

Application No.: 12/807,641 	Date Mailed: 2012-06-21
First Named Inventor: Krumel, Andrew, K.	Examiner: SIMITOSKI, MICHAEL J
Attorney Docket No.: 802-001C	Art Unit: 2439
Confirmation No.: 3474	Filing Date: 2010-09-10

Please find attached an Office communication concerning this application or proceeding.

Commissioner for Patents

Notice of Non-Compliant Amendment (37 CFR 1.121)	Application No. 12/807,641	Applicant(s) KRUMEL, ANDREW K.
		Art Unit 1600

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

The amendment document filed on 11 June, 2012 is considered non-compliant because it has failed to meet the requirements of 37 CFR 1.121 or 1.4. In order for the amendment document to be compliant, correction of the following item(s) is required.

THE FOLLOWING MARKED (X) ITEM(S) CAUSE THE AMENDMENT DOCUMENT TO BE NON-COMPLIANT:

- 1. Amendments to the specification:
 - A. Amended paragraph(s) do not include markings.
 - B. New paragraph(s) should not be underlined.
 - C. Other _____.
- 2. Abstract:
 - A. Not presented on a separate sheet. 37 CFR 1.72.
 - B. Other _____.
- 3. Amendments to the drawings:
 - A. The drawings are not properly identified in the top margin as "Replacement Sheet," "New Sheet," or "Annotated Sheet" as required by 37 CFR 1.121(d).
 - B. The practice of submitting proposed drawing correction has been eliminated. Replacement drawings showing amended figures, without markings, in compliance with 37 CFR 1.84 are required.
 - C. Other _____.
- 4. Amendments to the claims:
 - A. A complete listing of all of the claims is not present.
 - B. The listing of claims does not include the text of all pending claims (including withdrawn claims)
 - C. Each claim has not been provided with the proper status identifier, and as such, the individual status of each claim cannot be identified. Note: the status of every claim must be indicated after its claim number by using one of the following status identifiers: (Original), (Currently amended), (Canceled), (Previously presented), (New), (Not entered), (Withdrawn) and (Withdrawn-currently amended).
 - D. The claims of this amendment paper have not been presented in ascending numerical order.
 - E. Other: _____.
- 5. Other (e.g., the amendment is unsigned or not signed in accordance with 37 CFR 1.4): For further explanation of the amendment format required by 37 CFR 1.121, see MPEP § 714.

TIME PERIODS FOR FILING A REPLY TO THIS NOTICE:

1. Applicant is given **no new time period if the non-compliant amendment is an** after-final amendment or an amendment filed after allowance, or a drawing submission (only) If applicant wishes to resubmit the non-compliant after-final amendment with corrections, the **entire corrected amendment** must be resubmitted.
2. Applicant is given **one month**, or thirty (30) days, whichever is longer, from the mail date of this notice to supply the correction, if the non-compliant amendment is one of the following: a preliminary amendment, a non-final amendment (including a submission for a request for continued examination (RCE) under 37 CFR 1.114), a supplemental amendment filed within a suspension period under 37 CFR 1.103(a) or (c), and an amendment filed in response to a Quayle action. If any of above boxes 1 to 4 are checked, the correction required is only the corrected section of the non-compliant amendment in compliance with 37 CFR 1.121.

Extensions of time are available under 37 CFR 1.136(a) only if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action.

Failure to timely respond to this notice will result in:

- Abandonment** of the application if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action; or
- Non-entry** of the amendment if the non-compliant amendment is a preliminary amendment or supplemental amendment.

AMENDMENT

Sir:

In response to the office action mailed March 6, 2012, please re-examine the above-identified application in view of the following amendment and remarks.

IN THE CLAIMS:

1 – 96. (canceled)

97. A data protection system for filtering packets between at least an internet network and an internal network, wherein data is transmitted and received in the form of a plurality of packets, comprising:

a first interface circuit for coupling packets to and from the internet network;

a second interface circuit for coupling packets to and from the internal network;

a filtering circuit coupled between the first interface circuit and the second interface circuit;

wherein, as a packet is being received and transmitted between the first and second interface circuits, the packet is simultaneously subjected to one or more filtering criteria by the filtering circuit, wherein an end portion of the packet is selectively altered by the filtering circuit based on the filtering criteria, wherein the packet is selectively altered to be invalid if a determination has not been made as to whether the packet is valid or invalid by the time the end portion of the packet is received.

98. The system of claim 97, wherein the filtering criteria determine whether the packet is to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

99. The system of claim 97, wherein the filtering circuit includes at least first logic for determining characteristics of the packet being received and transmitted between the first and second interface circuits and at least a filter portion that subjects the packet to the plurality of filtering criteria while the packet is being received and transmitted between the first and second interface circuits.

100. The system of claim 99, wherein the filter portion includes at least a stateful filter portion and a non-stateful filter portion.

101. The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion and the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

102. The system of claim 100, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion while the non-stateful filter portion subjects the packet to

one or more non-stateful filtering criterion.

103. The system of claim 100, wherein a result aggregator logic receives one or more signals from the stateful filter portion and the non-stateful filter portion, wherein based on the received signals the result aggregator logic controls whether the packet is selectively altered to be invalid.

104. The system of claim 103, wherein the result aggregator logic receives a completion signal that indicates whether the stateful and/or non-stateful filter portions have subjected the packet to all of the filtering criteria.

105. The system of claim 104, wherein, if the completion signal is not received by the result aggregator logic by a time when the end portion of the packet has been received, then the packet is selectively altered by the filtering circuit to be invalid.

106. The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in parallel with the packet being received and transmitted between the first and second interface circuits, wherein a decision is made whether to selectively alter the packet to be invalid by a time when the end portion of the packet has been received.

107. The system of claim 97, wherein the packet is subjected to the plurality of filtering criteria in real time with the packet being received and transmitted between the first and second interface circuits.

108. The system of claim 97, further comprising one or more physical switches, wherein the packet is selectively subjected to the filtering criteria based on the state of the one or more physical switches.

109. The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria.

110. The system of claim 108, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria based on whether a computer coupled to the internal network is controlled to operate in a client mode or a server mode.

111. The system of claim 108, wherein the state of the one or more physical switches selectively controls a configuration or reconfiguration operation of the filtering circuit.

112. The system of claim 108, wherein the state of the one or more physical switches

selectively controls a reset operation of the filtering circuit.

113. The system of claim 31, further comprising one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of the system.

114. The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is powered or operational.

115. The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is subjecting a packet to the filtering criteria.

116. The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system has rejected one or more packets.

117. The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback that a computer coupled to the internal network is suspected to be under attack.

118. The system of claim 117, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

119. The system of claim 113, wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system until the one or more visual or audio feedback devices are reset by a user.

120. The system of claim 119, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

121. The system of claim 113, wherein the one or more visual or audio feedback devices comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system.

122. The system of claim 121, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system.

123. The system of claim 121, wherein the light source is controlled to selectively blink depending on the operation or status of the system.

124. The system of claim 123, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on a computer coupled to

the internal network.

125. The system of claim 121, wherein the at least one light source comprises an LED.

126. The system of claim 113, wherein the one or more visual or audio feedback devices comprise a speaker.

127. The system of claim 102, wherein the stateful filtering criteria are dependent upon physical switch position, packet characteristics, clock time and/or user-specified criteria.

128. The system of claim 127, wherein the user-specified criteria are entered via a physical input device.

129. The system of claim 128, wherein the physical input device comprises one or more switches, an audio input device, or display input device.

130. The system of claim 127, wherein the user specified criteria are entered via a configuration software.

131. The system of claim 130, wherein the user specified criteria are transferred from the configuration software to the system using a network protocol, infrared port or cable attachment.

132. The system of claim 129, wherein the one or more switches comprise a toggle switch, button switch or multi-state switch.

REMARKS

Claims 67 – 96 were examined. Claim 68 was indicated as allowable over the cited references, while the remaining claims were rejected in view of various prior art references and in view of obviousness-type double patenting.

While Applicant respectfully traverses the prior art rejections (and the double patenting rejection, subject to Applicant considering a terminal disclaimer if needed in view of the amendments herein), Applicant wishes to thank the Examiner for the indication of allowable subject matter in claim 68. In view of this, and in order to expedite prosecution, Applicant has canceled claims 67 – 96 and added new independent claim 97, and added new dependent claims 98 – 132, to more fully claim Applicant's invention consistent with the allowable subject matter. For example, independent claim 97 recites “wherein the packet is selectively altered to be invalid if a determination has not been made as to whether the packet is valid or invalid by the time the end portion of the packet is received.” Accordingly, Applicant submits that the invention defined by the currently pending claims is patentable over the cited references, for this and other features in the pending claims.

Reconsideration and allowance is requested. Upon examination of this amendment, Applicant's attorney would like to discuss with the Examiner the need for a terminal disclaimer in view of this amendment. Please contact the undersigned if there are any questions.

No new matter has been added. Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

Alan R. Loudermilk

			MAIL DATE 03/06/2012	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 12/807,641	Applicant(s) KRUMEL, ANDREW K.
	Examiner MICHAEL SIMITOSKI	Art Unit 2439

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 10 September 2010.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) Claim(s) 67-96 is/are pending in the application.
5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 67-96 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on 10 September 2010 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 12) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 4/8/11.
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____ .
- 5) Notice of Informal Patent Application
- 6) Other: _____.

DETAILED ACTION

1. The IDS of 4/8/2011 was received and considered.
2. Claims 67-96 are pending.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 67, 69-70 and 80-82 are rejected under 35 U.S.C. 102(b) as being anticipated by “Design and Evaluation of a High-Performance ATM Firewall Switch and Its Applications” by Xu et al. (**Xu**).

Regarding claim 67, Xu discloses a method for communicating data between an external computing system and an internal computing system over a packet-based network, wherein data is transmitted and received in the form of a plurality of packets (pp. 1198-1199, §V), the method comprising the steps of: receiving a packet from the external computing system over the network (from ATM public WAN, p. 1199), the packet having at least a first portion and an end portion (first and last cell, p. 1191, §B), and transmitting the packet to the internal computing system (cells are passed, p. 1191, §B); in parallel with the step of receiving and transmitting the packet, determining characteristics of the packet from the first portion (header information, p. 1191, §B); in parallel with the step of receiving and transmitting the packet, performing one or more checks on the packet (inspection, p. 1191, §B); in parallel with the step of receiving and transmitting the packet, determining if the packet should be a valid packet or an invalid packet based on the one or more checks (switch is transmitting the packet cells, except the last, while inspection is taking place, p. 1191, §B), wherein the packet is analyzed in real time to determine if the packet should be valid or invalid while the packet is being concurrently transmitted to the

Art Unit: 2439

internal computing system (all cells except the last are allowed to pass during inspection, p. 1191, §B, where the inspection is finished before the last cell arrives, p. 1191, ¶2); and after receiving the end portion of the packet, selectively altering the end portion of the packet based on whether the packet has been determined to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet (last cell is kept “hostage” and, after a decision is made that the packet is unsafe/invalid, the last cell is replace with randomly-generated data so that the receiver will drop the packet as a result of a CRC failure, p. 1191, §B).

Regarding claim 69, Xu discloses wherein the packet is analyzed to determine if the packet is valid without the packet having been completely received and buffered (explicitly stated as a benefit over the art, p. 1191, §B).

Regarding claim 70, Xu discloses wherein the packet is determined to be an invalid packet if it is determined that the packet contains a virus, is unauthorized or presents a risk of harm to the internal computing system (malicious packet, p. 1192, ¶2).

Regarding claim 80, Xu discloses wherein the one or more checks are selectively performed based on a communication state between the external computing system and the internal computing system (first or second cell, p. 1192, ¶2 and address port information, p. 1191, §A).

Regarding claim 81, Xu discloses wherein the communication state comprises one or more network addresses and/or one or more port numbers (source and destination address, p. 1191, §A).

Regarding claim 82, Xu discloses wherein the network address comprises an IP address for the external computing system and/or the internal computing system (p. 1191, §A).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2439

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 71-74, 76, 83-85, 91-93 and 95-96 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu**, as applied to claim 67 above, in view of "PacketShaper 4000 Getting Started Version 4.0" by **Packeteer**.

Regarding claims 71-74 and 76, Xu lacks wherein the one or more checks are at least in part selectively performed based on a state of a physical switch. However, Packeteer teaches that it is known to include a power switch to enable/disable function of a device, such as an on/off switch (p. 7). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include an on/off toggle switch, thereby affecting the checks based on the state of the switch, affecting the configuration of the checking circuit (on/off), enabling/disabling the checks (on/off). The plurality of checks would selectively perform based on the state an on/off switch. An on/off switch would also control the configuration (on/off). One of ordinary skill in the art would have been motivated to perform such a modification, as it was well known in the art to do so, as taught by Packeteer.

Regarding claims 83-85, 91-92, 95, Xu lacks providing visual or audio feedback with one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of a packet filter process. However, Packeteer teaches that it is known in the art to provide a "status LED", being green or amber in color depending on whether shaping (filtering) is on/operational (p. 41) on a hardware packet-shaper/packet-filter (p. 1). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include a status LED in Xu's system. One of ordinary skill in the art would have been motivated to perform such a modification to convey status information, as was known in the art, as taught by Packeteer.

Regarding claim 93, Xu lacks a light source that is selectively controlled to blink depending on the operating status. However, Packeteer teaches that it is known to include “network LEDs” to that flicker/blink when transmission or receiving activity occurs (p. 41) in a hardware packet-shaper/packet-filter (p. 1). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include network LEDs in Xu’s system. One of ordinary skill in the art would have been motivated to perform such a modification to convey activity information, as was known in the art, as taught by Packeteer.

Regarding claim 96, Xu lacks a speaker to provide feedback. However, it was known in the art, at the time the invention was made, to provide a speaker, such as a PC main board speaker, to provide audio feedback (for example on errors), for the purpose of interacting and alerting a human user. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use a speaker in Xu’s system to provide feedback. One of ordinary skill in the art would have been motivated to perform such a modification as it was known in the art to do so.

7. Claim 75 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu and Packeteer**, as applied to claim 73 above, in view of U.S. Patent 6,052,788 to Wesinger, Jr. et al. (**Wesinger**).

Regarding claim 75, Xu discloses a system, as modified above to include a user-controlled switch such as a power switch, but lacks wherein the circuit that performs the one or more checks is configured or reconfigured based on commands from the internal computing system and based on a state of the at least one user-controlled switch. However, Wesinger that configuration of firewalls may be easily accomplished by running a “configurator” which provides a Web-based front-end for editing configuration files, preferably from a secured client (col. 9 lines 31-46). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to allow changing of the firewall’s configuration based on commands from the internal computing system/LAN/secure client

Art Unit: 2439

(through a Web-browser interface). One of ordinary skill in the art would have been motivated to perform such a modification to easily accomplish firewall configuration, as taught by Wesinger (col. 9 lines 31-46).

8. Claims 77-79 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu**, as applied to claim 67 above, in view of U.S. Patent 6,795,918 to **Trolan**.

Regarding claim 77, Xu lacks wherein the one or more checks are performed with a programmable logic device, wherein logic within the programmable logic device is selectively programmed to perform the one or more checks in parallel with the receiving and transmitting of the packet. However, Trolan teaches a packet analyzer, where inspection is performed based on data in a programmable logic device (col. 6, lines 6-10, coll. 7, lines 17-26), allowing additional security (col. 7, lines 30-34). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Xu such that the one or more checks are performed with a programmable logic device implementing IM/OM (Xu, p. 1192, §III), wherein logic within the programmable logic device is selectively programmed to perform the one or more checks in parallel with the receiving and transmitting of the packet. One of ordinary skill in the art would have been motivated to perform such a modification to allow physical security, as taught by Trolan. It is further noted that PLDs are known in the art to provide the speed of a hardware implementation, while still allowing reprogramming.

Regarding claim 78, Xu discloses wherein a first physical interface circuit receives the packet from the network (IM, p. 1192, Fig. 2), wherein the packet is coupled to the programmable logic device (as modified above, p. 1192, Fig. 2), wherein the packet is coupled from the programmable logic device to a second physical interface circuit for transmission to the internal computing system (as modified above, p. 1192, Fig. 2).

Art Unit: 2439

Regarding claim 79, Xu discloses wherein the programmable logic device (as modified above) performs the one or more checks while the packet is being coupled from the first physical interface to the second physical interface (performed in parallel with normal cell processing, pp. 1199, §VI).

9. Claims 86-88 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu** and **Packeteer**, as applied to claims 83 and 84 above, in further view of “BlackICE Pro User’s Guide Version 2.0” by Network Ice Corporation (**NIC**).

Regarding claims 86-88, Xu discloses a system, as modified above, but lacks audio or visual feedback when the system has rejected one or more packets, when it is suspected to be under attack, or the severity of the attack. However, NIC teaches that to make users aware of attacks and spot trends and patterns of attacks, it is useful to provide a list of possible attacks on the system (p. 3, Fig. 3) and indicating the severity (p. 21). Further, when a critical or serious event occurs, the system can cause the blocking of addresses and ports/rejection of packets, and indicate this to the user (p. 21 & p. 37). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use visual indicators to indicate when the system has rejected packets and when the system is under attack and to indicate the severity of an attack. One of ordinary skill in the art would have been motivated to perform such a modification to make users aware of attacks and to spot trends, as taught by NIC.

10. Claims 89-90 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu** and **Packeteer**, as applied to claim 84 above, in further view of U.S. Patent 6,101,540 to **Graf** and U.S. Patent 6,701,432 to Deng et al. (**Deng**).

Regarding claim 89, Xu, as modified above, teaches wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system performing the packet filter

Art Unit: 2439

process (status LED p. 41), but lacks until the one or more visual or audio feedback devices are reset by a user. However, Graf teaches that it is known for an administrator to receive alerts and to clear the alerts (col. 21, #4, #5) to allow correction. Further, Deng teaches alarms resulting from thresholds in a firewall (col. 9, lines 35-40, claim 8). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Xu to display alerts based on the firewall's operation, possibly based on alarm thresholds, and to enable an administrator to reset those alerts. One of ordinary skill in the art would have been motivated to perform such a modification to allow correction and continued operation, as taught by Graf and Deng.

Regarding claim 90, Xu, as modified, lacks, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch. However, Packeteer teaches a power switch (p. 7) and Xu, as modified by Graf and Deng, teaches clearing alarms. Therefore, a skilled artisan, at the time the invention was made, would have found it obvious to display alarms using the visual display of Packeteer and to allow resetting of those using a physical switch, such as the power switch. One of ordinary skill in the art would have been motivated to perform such a modification to gain the benefit of displaying alerts to the user and clearing those alerts by the user, without requiring a separate computer to interface with the firewall.

11. Claim 94 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Xu** and **Packeteer**, as applied to claim 93 above, in further view of "BlackICE Pro User's Guide Version 2.0" by Network Ice Corporation (**NIC**) and U.S. Patent 6,133,844 to Ahne et al. (**Ahne**).

Regarding claim 94, Xu discloses a system, as modified above, but lacks a light blinking at a rate indicative of a severity level of an attack. Packeteer teaches blinking LEDs indicating traffic activity (pp. 1 & 41). NIC teaches indicating a severity level of an attack to a user (pp. 1, 3, 21 & 37). Ahne teaches that on a printing device, an LED's blink rate can be altered and the LEDs can be used to convey the

Art Unit: 2439

operating status of the device (col. 7 lines 22-52 & col. 8 lines 20-37). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the blink rate of a light, as taught by Ahne, on Xu's firewall system, as suggested by Packeteer, to indicate the severity level of an attack, as taught by NIC. One of ordinary skill in the art would have been motivated to perform such a modification to convey operating status to a user, as taught by Ahne (col. 7 lines 22-52 & col. 8 lines 20-37).

Double Patenting

12. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

13. Claims 67-96 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2-30 of U.S. Patent No. 7,013,482. Although the conflicting claims are not identical, they are not patentably distinct from each other because (in claim 1 of the patent), removal of “wherein at least ...” and “wherein the packet is selectively altered to be invalid if a determination ...” is obvious for reasons of breadth.

14. Further, claims 67-96 are obvious variations over the patent claims 1-30 in view of at least Xu and Packeteer.

Allowable Subject Matter

15. Claim 68 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and the above double patenting rejection were overcome.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL SIMITOSKI whose telephone number is (571)272-3841. The examiner can normally be reached on Monday - Thursday, 6:45 a.m. - 4:15 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Edan Orgad can be reached on (571)272-7884. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Marshall, TX 75670

Title:Real time firewall/data protection systems and methods

Publication No.US-2011-0197273-A1

Publication Date:08/11/2011

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

Office of Data Management, Application Assistance Unit (571) 272-4000, or (571) 272-4200, or 1-888-786-0101

Date Mailed: 05/05/2011

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PETITION AND FEE FOR EXTENSION OF TIME UNDER 37 C.F.R. 1.136(a)

Dear Commissioner,

Applicant hereby petitions for a three-month extension of time in order to respond to the notice of missing parts mailed October 20, 2010. Please charge Deposit Account No. 50-0251 in the amount of \$555.00 for the extension fee. A response to the notice accompanies this submission.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

MAILED
APR 22 2011
OFFICE OF PETITIONS

In re Application of :
Krumel :
Application No. 12/807,641 :
Filed: September 10, 2010 :
Attorney Docket No. 802-001C :
For: REAL TIME FIREWALL/DATA :
PROTECTION SYSTEMS AND METHODS :

This is a decision on the petition, filed March 24, 2011, requesting, in effect, withdrawal of the Notice of to File Missing Parts of Nonprovisional Application (Notice), mailed October 20, 2010, insofar as it alleges Figure 5 was omitted when the application was filed. The petition will be treated under 37 CFR 1.53(e).

The petition under 37 CFR 1.53(e) is **GRANTED**.

The application was filed on September 10, 2010. On October 20, 2010, the Office of Patent Application Processing mailed a Notice informing applicant that Figure 5 appeared to have been omitted from the application filed on September 10, 2010.

In response to the Notice, petitioner filed the present petition. Petitioner requests that Figure 5 be accorded a filing date of September 10, 2010 on the basis that it was received in the Patent and Trademark Office (PTO) on September 10, 2010.

In support, the petition is accompanied by a copy of applicant's itemized postcard receipt showing a Patent Office generated barcode citing September 10, 2010 as the date of receipt of papers assigned Application No. 12/807,641. The postcard lists that the filing included, *inter alia*, 14 sheets of drawings. A review of the application file reveals that there are 13 pages present, depicting Figures 1a, 1b, 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, and 13.

The return postcard constitutes *prima facie* evidence that 14 sheets of drawings, including missing Figure 5, were filed on September 10, 2010. MPEP 503. Accordingly, the request is granted.

Pursuant to petitioner's request, the \$400.00 fee submitted with the instant petition will be refunded to petitioner's deposit account.

The application is being returned to Office of Patent Application Processing for further pre-examination processing, with a filing date of **September 10, 2010**, adding the copy of Figure 5 supplied with the present petition to the drawings for the application.

Any inquiries pertaining to this matter may be directed to the undersigned at (571) 272-3230.

PETITION FOR DATE OF DEPOSIT FOR DRAWING AND STATEMENT IN SUPPORT OF SAME

Sir:

In response to the notice to file missing parts mailed October 20, 2010, Applicant hereby petitions for the date of deposit of Fig. 5 as the date of filing this application. In support thereof, Applicant states as follows.

Applicant has reviewed the file for this application and submits the following.

Attached is a copy of the application transmittal for this application, which includes the submission of 14 sheets of formal drawings. This would include Fig. 5 as one of the 14 sheets.

At the time of filing the application, Applicant submitted a return postcard that requested that the USPTO acknowledge receipt of the submission, including "Formal Drawings (14 sheets)". This would include Fig. 5. Attached is a copy of the return postcard received from the USPTO acknowledging such receipt.

Applicant also submits a copy of the 14 sheets of formal drawings included in the file for this application, which includes Fig. 5.

Accordingly, Applicant respectfully requests that this petition be granted, and that the application be processed, with Fig. 5 included as part of the application as filed. Applicant also notes that the ultimate parent of this application resulted in USP 7,013,482, which also included Fig. 5. Further, the application transmittal for this application incorporated by reference parent

(54) 【発明の名称】 検診台

(57) 【要約】

【課題】 便利かつ安全な、旋回機能付き検診台を得る。

【解決手段】 旋回用の押しボタンスイッチ11と、指定した角度になったときにクローズする角度検出器12と、角度検出信号dを遅延させた信号eを得るCR回路23およびヒステリシス付きインバータ26と、ブレーキを解除させるブレーキ解除装置13と、スイッチ11からの信号cと角度検出信号dとその遅延信号eが入力され、その内部の所定のロジックによってブレーキ解除信号fを生じてブレーキ解除装置13を動作させるPLD27とにより構成される。

【特許請求の範囲】

【請求項1】 旋回機構と、その旋回を止めるブレーキと、旋回用スイッチと、旋回角度を検出し指定した角度となったときに角度検出信号を生じる角度検出器と、上記角度検出信号を遅延させる遅延回路と、旋回用スイッチからの信号と角度検出信号と角度検出信号の遅延信号とを用いて上記ブレーキを制御する制御装置とを備えることを特徴とする検診台。

【発明の詳細な説明】

【0001】

【発明の属する技術分野】この発明は、患者あるいは被検者をその上に横たえて医学的な診断を行なうための検診台に関し、とくにX線検査のために使用される検診台に関する。

【0002】

【従来の技術】X線検査用の検診台は、C型アームにX線管とX線撮像装置とを保持させたタイプのX線検査装置と組み合わせられて使用されることが多い。この種の検診台は、通常、天板を上下に昇降させる昇降機構と、天板を長手方向・短手方向に移動させるスライド機構とを備えている。また、水平面内で自由に回転できるように、検診台の支柱部分に旋回機構を持たせたものもある。これは、緊急時に患者に対する処置を行なうため、あるいは1室のX線検査室に複数のX線検査装置を設置して、それぞれのX線検査装置に対して1台の検診台で対応させるためである。

【0003】この旋回機構を備えた検診台では、メカニカルブレーキを設けて、これをオン・オフすることにより旋回方向の動きに対するコントロールを行ない、一定の角度で固定させることができるようにしている。

【0004】

【発明が解決しようとする課題】しかしながら、従来の旋回機構を備えた検診台では、旋回角度がどの角度であるかを検出する機構が設けられていず、所望の指定角度で固定することが難しく、使用上不便であり、また危険でもあるという問題があった。

【0005】この発明は、上記に鑑み、任意にメカニカルブレーキを解除して手動で旋回可能とするともに、指定した角度に到達するとブレーキが自動的にかかってその角度で止まって固定され、さらにその指定角度を通過させて別の角度で固定させるようにすることも容易にでき、これにより使用上の便利さを格段に向上させ、さらに危険性がなく安全となるように改善した、検診台を提供することを目的とする。

【0006】

【課題を解決するための手段】上記の目的を達成するため、この発明による検診台においては、旋回機構と、その旋回を止めるブレーキと、旋回用スイッチと、旋回角度を検出し指定した角度となったときに角度検出信号を生じる角度検出器と、上記角度検出信号を遅延させる遅

延回路と、旋回用スイッチからの信号と角度検出信号と角度検出信号の遅延信号とを用いて上記ブレーキを制御する制御装置とが備えられることが特徴となっている。

【0007】旋回用スイッチを操作することによりブレーキを解除すれば、検診台を任意に旋回することができる。指定した角度で角度検出信号が生じるように設定しておけば、その角度で生じる角度検出信号を用いてブレーキ解除を停止させ、そこでブレーキを効かせて固定することができる。角度検出信号とその遅延信号とを用いることにより、角度検出されてブレーキが確実にロックされる前にさらに旋回させれば、いったん効きはじめてブレーキを解除して旋回を続けることができるようになる。ブレーキによりロックされているときに、それを上回る力で旋回させられて角度検出信号がなくなった場合に、角度検出信号とその遅延信号とを用いることによって、ブレーキが解除されることがないようにし、もって不慮の旋回による事故の誘発を防ぐことができる。

【0008】

【発明の実施の形態】つぎに、この発明の実施の形態について図面を参照しながら詳細に説明する。図1はこの発明にかかる検診台の制御部を示すブロック図である。この図において、押しボタンスイッチ11、角度検出器12、ブレーキ解除装置13、LED14が制御基板20に接続される。押しボタンスイッチ11は旋回のオン・オフ制御用で、手動で押圧操作した後手をはなすと自動的に復帰するスイッチである。角度検出器12は、検診台の旋回機構(図では省略)に取り付けられるリミットスイッチなどからなり、任意の角度に調節できるようになっていて、検診台がその角度までに旋回してくるとオンするようになっている。

【0009】ブレーキ解除装置13は、検診台の旋回に対してブレーキをかけるメカニカルブレーキの解除を行うものである。また、このブレーキ解除装置13の動作状態を表示するためLED14が設けられていて、このLED14はブレーキ解除装置13が作動しブレーキが解除された状態の時に点灯するようにされている。

【0010】制御基板20には、スイッチによるノイズ除去用のCR回路21、22、23およびヒステリシス付きインバータ24、25、26と、PLD(プログラムロジックデバイス)27と、ブレーキ解除装置13のドライバ用トランジスタ28と、LED14のドライバ用トランジスタ29などが実装されている。押しボタンスイッチ11からの信号はCR回路21およびヒステリシス付きインバータ24を経て、波形がなまらせられチャタリングやノイズ等が除去されてPLD27に入力される。また角度検出時にクローズする角度検出器12からの信号は、同じくCR回路22およびヒステリシス付きインバータ25を介してPLD27に入力される。さらにこの信号はインバータ25を経た後、さらに

3

CR回路23およびヒステリシス付きインバータ26を介して所定の時間(たとえば約0.3秒)遅延させられてPLD27に入力される。

【0011】押しボタンスイッチ11からPLD27に入力される信号cはCR回路21およびインバータ24を経ることにより、それが押されてオンになると、ハイ(High)レベルに、オフになるとロー(Low)レベルに、それぞれ変化する。また、角度検出器12からPLD27に入力される信号dは、CR回路22およびインバータ25を経ることにより反転され、角度検出器12が角度検出してオンになるとハイレベルに、オフになるとローレベルになる。さらに、この信号dはCR回路23およびインバータ26を経て遅延された後反転されるため、信号eは、信号dが所定時間ハイレベルを継続したときにローレベルになり、所定時間ローレベルを継続したときにハイレベルになる。

【0012】PLD27には、これらの信号c、d、eに加えて、約2kHzのクロック信号aと、電源投入時にローレベルからハイレベルになるマスターリセット信号bが入力される。これらのクロック信号aおよびマスターリセット信号bは、後述のPLD27内のラッチ回路に入力される。また、このPLD27からの出力信号fはトランジスタ28、29に送られて、ブレーキ解除装置13およびLED14の駆動に用いられる。

【0013】押しボタンスイッチ11を押すと、ブレーキ解除装置13が作動し、ブレーキが解除されて、旋回可能な状態となり、つぎに再び押しボタンスイッチ11を押すとブレーキ解除装置13が停止し、ブレーキがかかった状態となる。そこで、最初に押しボタンスイッチ11を押してブレーキを解除し、手動で検診台を旋回させ、所望の角度にまで旋回できたら、再び押しボタンスイッチ11を押してブレーキがかかった状態としてその角度で固定させる、というのが基本的な動作となる。また、角度検出器12を所定の角度にセットしておけば、上記のように押しボタンスイッチ11を押してブレーキを解除し手動で検診台を旋回させていって、その角度にまで旋回したときに自動的にブレーキの解除が停止してブレーキがかかり、その角度で停止・固定されることになる。

【0014】さらに、このように角度検出器12を所定の角度にセットしたが、旋回途中で気が変わり、その角度を通過させて別の角度で固定したいことになったときは、ブレーキが確実にロックされる前に通過させることができ、そうするとブレーキが解除され、その後任意の角度で押しボタンスイッチ11を再度押せば、上記の基本的な動作と同様にその角度でブレーキをロックさせて固定させることができる。

【0015】また、ブレーキのロック中に、検診台になんらかの力がかかって、角度検出器12がオフになり、そのことによってブレーキが解除され、自由に旋回可能

4

な状態になるおそれもあるが、遅延信号eを用いることにより、このような場合もブレーキのロックが解除されることがないようにし、検診台の不慮の旋回を防いで安全性を高めている。

【0016】これらを実現するため、PLD27は図2のように構成される。なお、この図2のロジックは、具体的にはPLD27に焼き込むプログラムによって実現する。図2に示すように、AND回路31~38、OR回路41~46、インバータ51~54、およびラッチ回路61~63が備えられる。これらのラッチ回路61~63は、上記の通り、マスターリセット信号bでリセットされて、それらの出力がローレベルにされ、また、クロック信号aの立ち上がり時点で入力信号を読み込んでセットされる。

【0017】つぎに上記の信号a、b、c、d、e、fおよびラッチ回路62、63の出力h、gを表わすタイムチャート(図3~図7)を参照しながら、動作について詳しく説明する。図3~図7において、A~Gは信号a~gの論理レベルをそれぞれ表わす。まず、基本的な動作について図3を参照して説明する。

【0018】(期間71)電源投入後、マスターリセット信号bが図3のBのように立ち上がる、クロック信号aのつぎの立ち上がりでラッチ回路61、62、63がすべてリセットされてそれらの出力f、h、gがローレベルになる。

【0019】(期間72)このとき、押しボタンスイッチ11を押すと、信号cが図3のCのようにハイレベルになるが、上記の通り信号f、gはローレベルだから、それらをインバータ52、53で反転した信号はハイレベルになるため、AND回路31の出力は信号cがハイレベルになることに応じてハイレベルになり、これがOR回路42を経てラッチ回路61に入力される。そこで、クロック信号aのつぎの立ち上がり時点でラッチ回路61がセットされて信号fは図3のFに示すようにハイレベルになる。

【0020】すると、AND回路31の出力はローレベルになるが、押しボタンスイッチ11がオンになっている間は、信号cはハイレベルだから、信号fがハイレベルとなることによりAND回路33の出力がハイレベルとなり(信号gの反転信号はハイレベルだから)、OR回路42を経てこの信号がラッチ回路61の入力に与えられ、クロック信号aの立ち上がりごとにラッチ回路61がセットされ、その出力fはハイレベルに維持される。

【0021】(期間73)押しボタンスイッチ11がオフになり、信号cがローレベルになると、このAND回路33の出力もローレベルになるが、今度はAND回路34の条件が揃ってこのAND回路34の出力がハイレベルになり、OR回路42を通じてラッチ回路61に送られ、ラッチ回路61の出力fはハイレベルを維持す

5

る。すなわち、信号cがローレベルになることによりインバータ54の出力がハイレベルとなり、このとき信号fはハイレベルで、信号dはローレベル、そのインバータ51を経た信号はハイレベルだから、AND回路34の出力がハイレベルになるからである。

【0022】一方、信号gが図3のGに示すようにローレベルで、その反転信号がハイレベルであるから、信号cの反転信号がハイレベルになると、AND回路37の出力がハイレベルとなり、これがOR回路46を経てラッチ回路63に送られ、クロック信号の立ち上がりでラッチ回路63がセットされてその出力gがハイレベルとなる。

【0023】そこで、この期間73の定常状態で信号fがハイレベルになることにより、ブレーキ解除装置13が作動してブレーキが解除されるとともに、LED14が点灯する。操作者はこのLED14が点灯したことから旋回可能な状態となっていることを確認し、検診台を手動で回転させることになる。

【0024】(期間74) 所望の回転角度まで旋回できたら、押しボタンスイッチ11を再び押す。すると信号cがハイレベルになり、インバータ54の出力がローレベルになるので、AND回路34の出力がローレベルになる。他のAND回路31、32、33の出力もすべてローレベルであるから、クロック信号aのつぎの立ち上がりでラッチ回路61はローレベルを取り込み、信号fはローレベルになる(図3のF)。

【0025】このとき、インバータ54の出力がローレベルになることに応じてAND回路37の出力がローレベルになるが、信号cはハイレベル、信号dの反転信号はハイレベル、信号gはハイレベルだから(図3のC、D、G)、AND回路38の出力がハイレベルとなり、この信号はOR回路46を経てラッチ回路63に送られ、ラッチ回路63の出力gはハイレベルを維持する。

【0026】(期間75) 押しボタンスイッチ11がオフになって信号cがローレベルになると、OR回路44の出力はローレベルになり(信号fがこのとき上記の通りローレベルになっているから)AND回路38の出力はローレベルになる。また、インバータ54の出力はハイレベルになるが、信号fはローレベルだからAND回路37の出力もローレベルとなる。そのため、OR回路46の出力がローレベルとなり、ラッチ回路63は、クロック信号aのつぎの立ち上がりでローレベルの信号を取り込み、その出力gが図3のGに示すようにローレベルとなる。この期間75の定常状態は最初の期間71の状態と同じであり、電源投入後のすべてのラッチ回路61~63がリセットされた状態に戻るようになる。

【0027】つぎに角度検出器12を所定の角度にセットし、その角度まで手動で検診台を旋回させていって、その角度で停止・固定する場合について図4を参照しながら説明する。この図4で、最初の状態(期間76)

6

は、図3の期間71と同じである。また、その後、押しボタンスイッチ11を押した期間77、押しボタンスイッチ11が戻ってオフになった期間78は、それぞれ図2の期間72、73と同様である。すなわち、期間78では信号f、gはハイレベルとなっており、信号hはローレベルになっている。

【0028】(期間79) 検診台が旋回していった角度検出器12がオンになると、信号dが図4のDに示すようにハイレベルになる。このとき信号fはまだハイレベルであるから、AND回路35の出力がハイレベルとなり、OR回路43の出力がハイレベルになって、図4のHに示すように、ラッチ回路62の出力hがつぎのクロック信号aの立ち上がりでハイレベルになる。

【0029】一方、信号dがハイレベルになるとインバータ51の出力はローレベルになり、このときは信号hは上記のようにハイレベルになっていずまだローレベルであるから、OR回路41の出力がローレベルとなって、AND回路34の出力がローレベルになる。期間78では、期間73と同じに、AND回路31~33の出力はいずれもローレベルであるから、AND回路34の出力がローレベルになることに応じてOR回路42の出力はローレベルになり、その結果、ラッチ回路61の出力fは、図4のFに示すようにつぎのクロック信号aの立ち上がりでローレベルになる。これによりブレーキが効きはじめるとともにLED14が消灯して、角度検出器12で検出した角度に、検診台が固定されることになる。

【0030】信号fがローレベルになるとAND回路35の出力はローレベルになるが、このときはすでに上記のように信号hがハイレベルになるので、ハイレベルの信号dとこのハイレベルの信号hによりAND回路36がハイレベルになり、これがOR回路43を経てラッチ回路62に送られ、ラッチ回路62の出力hは信号dがハイレベルである限りハイレベルを保つ。

【0031】信号fがローレベルになるとAND回路37の出力はローレベルになる。また、このとき信号cはローレベルであるから、信号fと信号cが入力されるOR回路44の出力はローレベルになる。そのため、AND回路38の出力はローレベルになる。その結果、これらAND回路37、38の出力が送られるOR回路46の出力がローレベルとなってクロック信号aのつぎの立ち上がりで、図4のGに示すように、ラッチ回路63の出力gがローレベルになる。

【0032】このようにブレーキが効き、検診台が角度検出器12が検出した角度に固定されているときに、押しボタンスイッチ11を押したときの動作は図5のようになる。この図5で期間80は図4の期間79の続きであって各信号の状態はまったく同じである。

【0033】(期間81) ここで押しボタンスイッチ11を押すと、図5のCに示すように信号cがハイレベル

7

になるが、このときは信号fおよび信号gはローレベルであるから、AND回路31の出力がハイレベルになる。そこで、図5のFに示すように、つぎのクロック信号aの立ち上がりでラッチ回路61の出力信号fがハイレベルになり、これによってブレーキが解除される。したがって検診台を自由に回転させることができる状態となる。

【0034】信号fがハイレベルになると、AND回路31の出力はローレベルになるが、このときは信号gはローレベルだからインバータ54の出力はハイレベルとなり、信号cがハイレベルである限り、AND回路33の出力がハイレベルになる。そのため、信号cがハイレベルである間はこのAND回路33の出力によってラッチ回路61の出力fはハイレベルを維持する(図5のF)。

【0035】(期間82)押しボタンスイッチ11が復帰してオフになり、信号cがローレベルになると、AND回路33の出力はローレベルになるが、このときは信号f、hがともにハイレベルだから、インバータ54によって信号cを反転した出力がハイレベルになることによりAND回路34の出力がハイレベルとなる。そのため、このAND回路34の出力によってラッチ回路61の出力fはハイレベルを維持する(図5のF)。

【0036】また、信号cがローレベルになると上記の通りインバータ54の出力はハイレベルになる。このとき信号fはハイレベルであるから、AND回路37の出力はハイレベルとなり、図5のGで示すように、ラッチ回路63の出力gはクロック信号aのつぎの立ち上がりでハイレベルとなる。

【0037】(期間83)信号fがハイレベルになって巡回可能な状態となり、この状態で検診台を巡回させると、角度検出器12が角度検出する角度から外れ、信号dがローレベルになる。すると、AND回路35、36ともその出力がローレベルになるから、ラッチ回路62の出力hは、図5のHで示すように、クロック信号aのつぎの立ち上がりでローレベルになる。このとき、信号fおよびインバータ54の出力はともに変わらずにハイレベルであるから、AND回路37の出力はハイレベルを保ち、結果としてラッチ回路63の出力gは、図5のGに示すようにハイレベルを維持する。また、インバータ51の出力は信号dがローレベルになることによりハイレベルになるため、信号hがローレベルになるにもかかわらず、OR回路41の出力はハイレベルを維持する。他方、インバータ54の出力は上記のように期間82以降ハイレベルになっており、また信号fはハイレベルであるから、AND回路34の出力はハイレベルを維持し、そのため信号fもハイレベルを維持する。

【0038】ここで、信号eは、図5のEに示すように、信号dがローレベルになってから所定の遅延時間の後ハイレベルになるが、この信号eはAND回路32に

8

入力されるのみである。このAND回路32には、他に信号fをインバータ52で反転した信号と、信号gをインバータ53で反転した信号とが入力されていて、これらはローレベルとなっている。そのため、信号eがハイレベルになってもAND回路32の出力はローレベルで変化することはない。

【0039】この期間83において、信号dがローレベルになり、遅れて信号eがハイレベルになった後の状態は図3の期間73と同様である。そのため、期間84において押しボタンスイッチ11を押し、その後その押しボタンスイッチ11が復帰したときの期間85の動作は図3の期間74および期間75とまったく変りない。すなわち、所望の角度だけ検診台を巡回できたときに押しボタンスイッチ11を押すことにより、上記のようにブレーキ解除状態を停止させてブレーキがロックされた状態とし、その角度で検診台を固定させることができる。

【0040】つぎに、角度検出器12を所定の角度にセットしたが、巡回途中で気が変わり、その角度を通過させて別の角度で固定したいことになったときの動作について、図6を参照しながら説明する。この図6において、期間86、87、88の動作は、図4の期間76、77、78の動作と同じである。期間89において信号dがハイレベルになり、その後信号f、gがローレベルに、信号hがハイレベルになることも図4の期間79と同様である。

【0041】(期間90)しかし、この場合は期間89において信号fがローレベルになることによりブレーキ解除が停止するが、ブレーキが確実にロックされる前に、さらに巡回されて角度検出器12が検出する角度を通過させられてしまい、信号dがローレベルになる。このとき、検出角度を通過する時間が十分に短くて信号dが図6のDで示すようにハイレベルとなっている時間が短い場合には、その遅延信号である信号eは、図6のEに示すようにハイレベルからローレベルに反転することなく、ハイレベルを維持する。したがって、信号dが短い時間のハイレベルの後ローレベルになる点と信号eがハイレベルを維持する点が図4の期間79と異なることになる。

【0042】信号dがローレベルになると、AND回路36の出力はローレベルになる。またAND回路35もすでに期間89において信号fがローレベルになることによりローレベルになっている。そのため、OR回路43の出力がローレベルになり、ラッチ回路62の出力hは、図6のHで示すようにクロック信号aのつぎの立ち上がりでローレベルになる。

【0043】そして、この信号dがローレベルになった時点では、未だ、信号hはハイレベル、信号gはローレベル、インバータ53の出力はハイレベルであり、信号fはローレベルでインバータ52の出力はハイレベルである。そのため信号dがローレベルに、インバータ51

の出力がハイレベルになると、AND回路32の出力がハイレベルになり、その結果、ラッチ回路61の出力fは、図6のFで示すようにクロック信号aのつぎの立ち上がりでハイレベルになる。

【0044】信号fがハイレベルになると、AND回路32の出力はローレベルになるが、今度はAND回路34の出力がハイレベルになる。すなわち、信号cはローレベルで、インバータ54の出力はハイレベルであり、OR回路41の出力はインバータ51の出力がハイレベルになった後ハイレベルとなっているため、AND回路34の出力がハイレベルになる。そこで、図6のFで示すように信号fはハイレベルを維持する。

【0045】また、信号cはローレベルで、インバータ54の出力はハイレベルであるから、信号fがハイレベルとなることにより、AND回路37の出力がハイレベルになるので、ラッチ回路63の出力gは、図6のGに示すように、クロック信号aのつぎの立ち上がりでハイレベルになる。こうして期間90の定常状態では図3の期間73の定常状態と同じになり、期間91において押しボタンスイッチ11を押し、その後その押しボタンスイッチ11が復帰したときの期間92の動作は図3の期間74および期間75とまったく変わりなく行われる。所望の角度だけ検診台を旋回してきたときに押しボタンスイッチ11を押し、上記のようにブレーキ解除状態を停止させてブレーキがロックされた状態とし、その角度で検診台を固定させることができる。

【0046】ブレーキのロック中に、検診台になんらかの強い力がかかって検出角度から外れた場合は図7のようになる。図7において、期間93、94、95、96は図4の期間76、77、78、79のそれぞれとまったく同じである。すなわち、期間96では角度検出器12が検診台がセットされた角度にあることを検出しており、信号dがハイレベルになり、信号fがローレベルになってブレーキがロックされている。また、この期間93、94、95は、図6の期間86、87、88と同じである。図7の期間96で信号dがハイレベルになっている時間が長いので、信号eが遅れてローレベルになっている。このことは図4の期間79と同じである。これに対して、図6の期間89で信号dがハイレベルになっている時間は短いので信号eはそのままハイレベルを維持している。

【0047】(期間97)このとき、検診台がそのブレーキにもかかわらず外力で旋回させられたとする。すると、検診台が角度検出器12の検出角度から外れるため信号dは図7のDに示すようにローレベルになる。すると、AND回路36の出力はローレベルになる。他方、AND回路35は、信号fがローレベルだから信号dのいかんにかかわらずローレベルになっている。そのため、OR回路43の出力はローレベルになり、ラッチ回路62の出力hは、図7のHに示すように、クロック信

号aのつぎの立ち上がりでローレベルになる。

【0048】このとき信号eは、図6の期間89でハイレベルになっているのとは異なり、図4の期間79と同様に期間96でローレベルになっているので、AND回路32の出力がハイレベルになることはない。そのため、信号fはローレベルを維持し、ブレーキが解除されることはない。その後、信号eは図7のEに示すように遅れてハイレベルになるが、図6の期間90とは異なり、信号fがハイレベルにならないので、出力gはハイレベルにならない。このように、検診台が外力で少し旋回したとしてもそのままブレーキが効いた状態を維持する。これによりブレーキが解除され検診台が自由に回転して不測の事故につながることを防止できる。なお、この期間97の定常状態は、図3の期間75や図5の期間85、図6の期間92と同じである。つまり図3の期間71、図4の期間76、図5の期間80、図6の期間86、図7の期間93と同じになって最初の状態に戻るようになる。

【0049】このように図6の動作と図7の動作とを比較することにより、信号dがある程度の時間的長さ持続しないと変化しない信号eを利用することによって、角度検出器12を所定の角度にセットしたが、旋回途中で気が変わり、その角度を通過させて別の角度で固定したいことになったときは、ブレーキが確実にロックされる前に通過させることができるようにすることと、ブレーキのロック中に検診台になんらかの力がかかって検診台が旋回し角度検出信号がなくなりブレーキが解除されて自由に旋回可能な状態になり事故につながるということを防止することとを同時に達成することができることがわかる。

【0050】なお、上記の説明はこの発明の実施の形態に関する一つの例についてのものであり、図1の制御基板20上の構成や、図2で示すPLD27内のロジックの構成などは他に種々に構成できることはもちろんである。

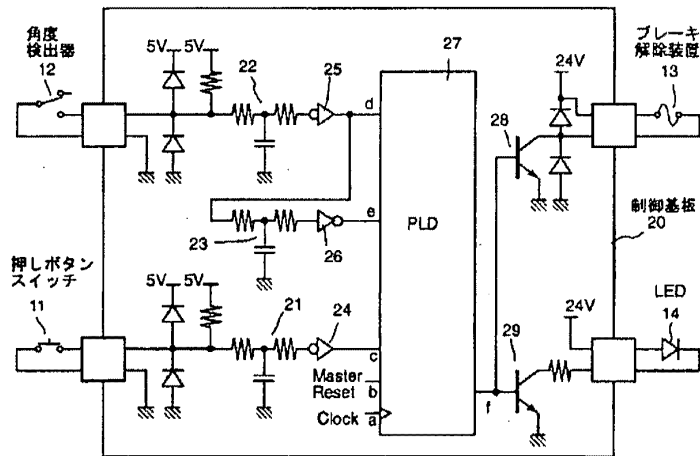

【0051】

【発明の効果】以上説明したように、この発明によれば、便利かつ安全な、旋回機能付き検診台を得ることができる。すなわち、任意の角度に旋回させて固定することができるとともに、指定したある角度まで旋回させていってその指定角度で旋回を止めて、そこで検診台を確実に固定することができる。また、指定角度まで旋回させていく途中で、その角度を通過させて別の角度とした場合には、そのまま旋回させるだけでその指定角度を通過させることができ、任意の角度で固定することができる。さらに、ブレーキにより固定されているときにそれを上回る力で旋回させられてもブレーキが解除することがなく、不慮の旋回による事故を防止でき、安全性が高められる。

ABSTRACT:

PROBLEM TO BE SOLVED: To provide an examination table having a rotating function and being safe and convenient.

SOLUTION: This examination table is composed of a button switch 11 for rotating the table, an angle detector 12 which closes when the table is inclined at a given angle, a CR circuit 23 for obtaining a signal (e) delaying an angle detecting signal (d), an inverter 26 with a hysteresis, a brake releasing apparatus 13 for releasing a brake, and a programmable logic device (PLD) 27 which, when the signal (c) from the switch 11, the angle detecting signal (d) and its delayed signal (e) are inputted, operates the brake releasing apparatus 13 by generating a brake releasing signal (f) on the

basis of a given logic built therein.

INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

1. Pursuant to 37 C.F.R. 1.97 and 1.98, and in compliance with 37 C.F.R. 1.56, the Office's attention is directed to the patents, publications and other information listed on the attached PTO-1449. A copy of each listed document is enclosed except for: (a) pending applications or (b) those previously cited or submitted to the Office in the following application(s) upon which this application relies for an earlier filing date under 35 U.S.C. 120:

Serial No.: 09/611,775 (now USP 7,013,482) Filing Date: July 7, 2000

Serial No.: 11/374,465 Filing Date: March 13, 2006

Regarding the document(s), publication(s) or other information listed on the attached PTO-1449, Applicant(s) believe(s) the same may qualify as "prior" art to this application and should be treated accordingly, although Applicant(s) reserve(s) the right to contest the prior art status of any document, publication or information cited herein.

2. Regarding each listed document that is not in the English language, an English-language translation accompanies this Statement as indicated on the attached PTO-1449 or a concise explanation of the relevance of the document is set forth in the following documents(s):

- (a) ___ Copy of each English language version of a search report indicating the degree of relevance found by the foreign office of each document being submitted from the search report.
- (b) ___ Attachment entitled "Concise Explanation of Relevance of Non-English Language Documents."
3. Pursuant to 37 C.F.R. 1.97(b) this Statement is being filed (one must be checked):
- (a) ___ Within 3 months of the filing date or date of entry into the National Stage.
- (b) X Before the mailing date of a first Office Action on the merits. If this Statement is not filed before the mailing date of a first Office Action on the merits, the required certification is given below or, in the absence thereof, the Office is authorized to charge the required fee set forth in 37 C.F.R. 1.17(p) to Deposit Account No. 50-0251 for consideration of this Statement.
- (c) ___ After the period set forth in 37 C.F.R. 1.97(b) but before the mailing date of either a final action or a notice of allowance.
- (1) ___ The required certification is given below, or
- (2) ___ Enclosed is a check covering the fee set forth in 37 C.F.R. 1.17(p) for consideration of this Statement, or
- (3) ___ Charge the fee set forth in 37 C.F.R. 1.17(p) to Deposit Account No. 50-0251
- (d) ___ After the mailing date of either a final action or a notice of allowance, but before payment of the issue fee. Petition hereby is made for consideration of this Statement and the required certification is indicated below.
- (1) ___ Enclosed is a check covering the fee set forth in 37 C.F.R. 1.17(i)(1), or
- (2) ___ Charge the fee set forth in 37 C.F.R. 1.17(i)(1) to Deposit Account No. 50-0251.
4. Certification (if applicable)
- (a) ___ The undersigned hereby certifies that each item of information contained in this Statement was cited in a communication from a foreign patent

office in a counterpart foreign application not more than 3 months prior to the filing of this Statement.

- (b) — The undersigned hereby certifies that no item of information contained in this Statement was cited in a communication from a foreign patent office in a counterpart foreign application or, to the undersigned's knowledge after making reasonable inquiry, was known to any individual designated in 37 C.F.R. 1.56(c) more than 3 months prior to the filing of this Statement.

5. The Commissioner is hereby authorized to charge any additional fees or credit any overpayment to Deposit Account No. 50-0251.

RESPONSE TO NOTICE TO FILE MISSING PARTS AND REQUEST TO CHARGE
DEPOSIT ACCOUNT FOR PAYMENT OF FILING FEES AND SURCHARGE

Sir:

In response to the notice to file missing parts mailed October 20, 2010 (copy attached), Applicant hereby requests that Deposit Account No. 50-0251 be charged \$870.00 in payment of the filing fee, search fee, examination fee and surcharge. Please note the preliminary amendment accompanying this submission, which cancels claims 1-66 and adds new claims 67-96, and thus the extra claims fee should be \$260.00. Applicant is a small entity. Applicant also is submitting herewith another copy of the declaration filed in the original parent application.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted,

Alan R. Loudermilk

PETITION AND FEE FOR EXTENSION OF TIME UNDER 37 C.F.R. 1.136(a)

Dear Commissioner,

Applicant hereby petitions for a three-month extension of time in order to respond to the notice of missing parts mailed October 20, 2010. Please charge Deposit Account No. 50-0251 in the amount of \$555.00 for the extension fee. A response to the notice accompanies this submission.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

PETITION FOR DATE OF DEPOSIT FOR DRAWING AND
STATEMENT IN SUPPORT OF SAME

Sir:

In response to the notice to file missing parts mailed October 20, 2010, Applicant hereby petitions for the date of deposit of Fig. 5 as the date of filing this application. In support thereof, Applicant states as follows.

Applicant has reviewed the file for this application and submits the following.

Attached is a copy of the application transmittal for this application, which includes the submission of 14 sheets of formal drawings. This would include Fig. 5 as one of the 14 sheets.

At the time of filing the application, Applicant submitted a return postcard that requested that the USPTO acknowledge receipt of the submission, including "Formal Drawings (14 sheets)". This would include Fig. 5. Attached is a copy of the return postcard received from the USPTO acknowledging such receipt.

Applicant also submits a copy of the 14 sheets of formal drawings included in the file for this application, which includes Fig. 5.

Accordingly, Applicant respectfully requests that this petition be granted, and that the application be processed, with Fig. 5 included as part of the application as filed. Applicant also notes that the ultimate parent of this application resulted in USP 7,013,482, which also included Fig. 5. Further, the application transmittal for this application incorporated by reference parent

06 FC:1462 400.00 DA

U.S. App. Ser. No. 11/374,465, which also included Fig. 5. Fig. 5 also is discussed in detail in the specification as filed.

Please charge Deposit Account No. 50-0251 in the amount of \$400.00 for this petition. Application requests that this petition be granted and the petition fee refunded.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

The undersigned declares that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true, and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$165 to complete the basic filing fee for a small entity.
- The oath or declaration is unsigned.

The following item(s) appear to have been omitted from the application:

- Figure(s) 5 described in the specification.

Applicant must reply to this notice within the time period set forth in this notice to avoid abandonment of this application. Applicant must select one of the three following options and the reply must comply with the requirements set forth in the selected option and any other requirements set forth in this notice. The reply should also indicate which option applicant has selected.

I. Petition for date of deposit: Should applicant contend that the above-noted omitted item(s) was in fact deposited in the U.S. Patent and Trademark Office (USPTO) with the nonprovisional application papers, a copy of this Notice and a petition (and \$400.00 petition fee (37 CFR 1.17(f))) with evidence of such deposit must be filed within **TWO MONTHS** of the date of this Notice. The petition fee will be refunded if it is determined that the item(s) was received by the USPTO. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b).**

II. Petition for later filing date: Should applicant desire to supply the omitted item(s) and accept the date that such omitted item(s) was filed in the USPTO as the filing date of the above-identified application, a copy of this Notice, the omitted item(s) (with a supplemental oath or declaration in compliance with 37 CFR 1.63 and 1.64 referring to such items), and a petition under 37 CFR 1.182 (with the \$400.00 petition fee (37 CFR 1.17(f))) requesting the later filing date must be filed within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b).**

Applicant is advised that generally the filing fee required for an application is the filing fee in effect on the filing date accorded the application and that payment of the requisite basic filing fee on a date later than the filing date

of the application requires payment of a surcharge (37 CFR 1.16(f)). To avoid processing delays and payment of a surcharge, applicant should submit any balance due for the requisite filing fee based on the later filing date being requested when submitting the omitted item(s) and the petition (and petition fee) requesting the later filing date.

III. Acceptance of application as deposited: Applicant may accept the application as deposited in the USPTO by filing an appropriate amendment as set forth in either (A) or (B) below within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b)**. The application will maintain a filing date as of the date of deposit of the application papers in the USPTO, and original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the date of deposit. A petition is not required for this option.

(A) If applicant wants to accept the application as deposited without adding the subject matter that was in the omitted item (e.g., a missing page or figure), applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. For a missing page of the specification,
 - a) a substitute specification including claims that amends the specification to renumber the pages consecutively and cancels any incomplete sentences, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. For a missing figure of the drawings,
 - a) replacement drawing sheets in compliance with 37 CFR 1.121(d) to renumber the drawing figures consecutively (if necessary),
 - b) a substitute specification excluding claims that amends the specification to cancel any references to any omitted drawing(s) and corrects the references in the specification to the drawing figures to correspond with any relabeled drawing figures, and
 - c) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
3. For a missing page of the claim listing only, a replacement claim listing with the claims renumbered consecutively or, if amendment to the claims is also necessary, then a complete claim listing in compliance with 37 CFR 1.121(c);
4. For a missing or unreadable compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the compact disc and the files contained on the compact disc, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
5. For a missing or unreadable file submitted on a compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the missing or unreadable file, and a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
 - b) a replacement transmittal letter listing all of the files except the missing or unreadable file in compliance with 37 CFR 1.52(e)(3)(ii).

(B) Alternatively, if applicant wants to accept the application as deposited but wishes to add the subject matter in the omitted item (e.g., a missing page or figure) by relying on an incorporation by reference under 37 CFR 1.57 or other portions of the original disclosure, applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. To add the subject matter in a missing page of specification,
 - a) a substitute specification excluding claims and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. To add a missing figure of the drawings, new and replacement drawing sheets in compliance with 37 CFR 1.121(d);

3. To add the subject matter in a missing page of the claim listing, a complete claim listing in compliance with 37 CFR 1.121(c) (e.g., a claim in the missing page should be submitted as a new claim);
4. To add the subject matter in a missing or unreadable compact disc,
 - a) a replacement compact disc and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4); and,
5. To add the subject matter in a missing or unreadable file submitted on a compact disc,
 - a) a replacement compact disc that contains all of the files listed in the specification including the missing or unreadable file and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4).

If applicant is relying on an incorporation by reference under 37 CFR 1.57 to add the omitted subject matter, then applicant must also comply with the requirements of 37 CFR 1.57.

Applicant is cautioned that correction of the above items may cause the specification and drawings page count to exceed 100 pages. If the specification and drawings exceed 100 pages, applicant will need to submit the required application size fee.

The applicant needs to satisfy supplemental fees problems indicated below.

The required item(s) identified below must be timely submitted to avoid abandonment:

- Additional claim fees of \$1196 as a small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16(f) of \$65 for a small entity in compliance with 37 CFR 1.27, must be submitted with the missing items identified in this notice.

SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is \$1806 for a small entity

- \$165 Statutory basic filing fee.
- \$65 Surcharge.
- The application search fee has not been paid. Applicant must submit \$270 to complete the search fee.
- The application examination fee has not been paid. Applicant must submit \$110 to complete the examination fee for a small entity in compliance with 37 CFR 1.27.
- Total additional claim fee(s) for this application is \$1196
 - \$1196 for 46 total claims over 20.

Office of Data Management, Application Assistance Unit (571) 272-4000, or (571) 272-4200, or 1-888-786-0101

Attorney Docket No.: 802-001

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

INVENTOR AND SPECIFICATION IDENTIFICATION

My residence, post office address and citizenship are as stated below next to my name. I believe that I am the original, first and sole inventor (*if only one name is listed below*) or an original, first and joint inventor (*if plural names are listed below*) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

REAL TIME FIREWALL/DATA PROTECTION SYSTEMS AND METHODS

TITLE OF INVENTION

the specification of which:

is attached hereto.

was filed on _____ as Application Serial No. _____
and was amended on _____ (*if applicable*).

was described and claimed in PCT International Application No. _____ filed on _____
and amended under PCT Article 19 on _____ (*if any*).

REVIEW OF PAPERS AND ACKNOWLEDGMENT OF DUTY OF CANDOR

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I do not know and do not believe that the invention claimed in the above-identified specification was ever known or used in the United States of America before my or our invention thereof, or patented or described in any printed publication in any country before my or our invention thereof or more than one year prior to this application, and that the same was not in public use or on sale in the United States of America more than one year prior to this application.

I acknowledge the duty to disclose to the Patent and Trademark Office information which I know is material to the patentability of this application in accordance with Title 37, Code of Federal Regulations, § 1.56.

FOREIGN APPLICATIONS AND PRIORITY CLAIM

The invention claimed in the above-described specification has not been patented or made the subject of an inventor's certificate issued before the date of this application in any country foreign to the United States of America on an application filed by me or my legal representatives or assigns more than twelve months prior to this application. I hereby claim foreign priority benefits under Title 35, United States Code, § 119 of any foreign application(s) for patent or inventor's certificate or of any PCT international application(s) designating at least one country other than the United States of America listed below and have also identified below any foreign application(s) for patent or inventor's certificate or any PCT international application(s) designating at least

Loudermilk & Associates o 10950 North Blaney Avenue Suite B o Cupertino, California 95014

BEST AVAILABLE COPY

one country other than the United States of America filed by me on the same subject matter having a filing date before that of the application(s) of which priority is claimed.

COUNTRY	APPLICATION NUMBER	DATE OF FILING (day, month, year)	PRIORITY CLAIMED UNDER 37 USC 119
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No

DOMESTIC PRIORITY CLAIM

I hereby claim the benefit under Title 35, United States Code, § 120 of any United States patent application(s) listed below and, insofar as this application discloses or claims subject matter in addition to that disclosed in the below listed priority applications. I acknowledge the duty to disclose to the Patent and Trademark Office all information known by me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date(s) of the below-listed prior application(s) and the national or PCT international filing date of this application.

(APPLICATION SERIAL NO.) (FILING DATE) (STATUS: PATENTED, PENDING, ABANDONED)

(APPLICATION SERIAL NO.) (FILING DATE) (STATUS: PATENTED, PENDING, ABANDONED)

POWER OF ATTORNEY

I hereby appoint Alan R. Loudermilk (Reg. No. 32,788), who is registered to practice before the Patent and Trademark Office, as my attorney with full power of substitution and revocation, to prosecute this application, to make alterations or amendments therein, to receive the patent and transact all business in the Patent and Trademark Office connected therewith.

All **CORRESPONDENCE** should be addressed to:

Loudermilk & Associates
10950 N. Blaney Avenue Suite B
Cupertino, CA 95014

All **TELEPHONE INQUIRIES** may be directed to Alan R. Loudermilk at (408) 342-1866.

PRELIMINARY AMENDMENT

Sir:

Prior to examination of the above-identified application, please amend this application as follows.

IN THE CLAIMS:

1 – 66. (canceled)

67. (new) A method for communicating data between an external computing system and an internal computing system over a packet-based network, wherein data is transmitted and received in the form of a plurality of packets, the method comprising the steps of:

receiving a packet from the external computing system over the network, the packet having at least a first portion and an end portion, and transmitting the packet to the internal computing system;

in parallel with the step of receiving and transmitting the packet, determining characteristics of the packet from the first portion;

in parallel with the step of receiving and transmitting the packet, performing one or more checks on the packet;

in parallel with the step of receiving and transmitting the packet, determining if the packet should be a valid packet or an invalid packet based on the one or more checks, wherein the packet is analyzed in real time to determine if the packet should be valid or invalid while the packet is being concurrently transmitted to the internal computing system.; and

after receiving the end portion of the packet, selectively altering the end portion of the packet based on whether the packet has been determined to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

68. (new) The method of claim 67, wherein the packet is selectively altered to be invalid if a determination has not been made as to whether the packet is valid or invalid by the time the end portion of the packet is received.

69. (new) The method of claim 67, wherein the packet is analyzed to determine if the

packet is valid without the packet having been completely received and buffered.

70. (new) The method of claim 67, wherein the packet is determined to be an invalid packet if it is determined that the packet contains a virus, is unauthorized or presents a risk of harm to the internal computing system.

71. (new) The method of claim 67, wherein the one or more checks are at least in part selectively performed based on a state of a physical switch.

72. (new) The method of claim 71, wherein the physical switch comprises one or more user-controlled switches, wherein the one or more checks are selectively performed based on a user-defined state of the one or more user-controlled switches.

73. (new) The method of claim 72, wherein the one or more user-controlled switches comprise at least one user-controlled switch that controls a configuration or reconfiguration of a circuit that performs the one or more checks.

74. (new) The method of claim 73, wherein the configuration or reconfiguration of the circuit that performs the one or more checks is performed without requiring user entry of configuration commands via software running on the internal computing system.

75. (new) The method of claim 73, wherein the circuit that performs the one or more checks is configured or reconfigured based on commands from the internal computing system and based on a state of the at least one user-controlled switch.

76. (new) The method of claim 71, wherein at least a subset of the one or more checks are selectively enabled or disabled based on the user-defined state of the user-controlled switches.

77. (new) The method of claim 67, wherein the one or more checks are performed with a programmable logic device, wherein logic within the programmable logic device is selectively

programmed to perform the one or more checks in parallel with the receiving and transmitting of the packet.

78. (new) The method of claim 77, wherein a first physical interface circuit receives the packet from the network, wherein the packet is coupled to the programmable logic device, wherein the packet is coupled from the programmable logic device to a second physical interface circuit for transmission to the internal computing system.

79. (new) The method of claim 78, wherein the programmable logic device performs the one or more checks while the packet is being coupled from the first physical interface to the second physical interface.

80. (new) The method of claim 67, wherein the one or more checks are selectively performed based on a communication state between the external computing system and the internal computing system.

81. (new) The method of claim 80, wherein the communication state comprises one or more network addresses and/or one or more port numbers.

82. (new) The method of claim 81, wherein the network address comprises an IP address for the external computing system and/or the internal computing system.

83. (new) The method of claim 67, further comprising the step of providing visual or audio feedback with one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of a packet filter process.

84. (new) The method of claim 83, wherein the one or more visual or audio feedback devices provide visual or audio feedback that a system performing the packet filter process is powered or operational.

85. (new) The method of claim 84, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system performing the packet filter process is subjecting a packet to filtering criteria.

86. (new) The method of claim 84, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system performing the packet filter process has rejected one or more packets.

87. (new) The method of claim 83, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the internal computing system is suspected to be under attack.

88. (new) The method of claim 87, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

89. (new) The method of claim 84, wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system performing the packet filter process until the one or more visual or audio feedback devices are reset by a user.

90. (new) The method of claim 89, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

91. (new) The method of claim 84, wherein the one or more visual or audio feedback devices comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system performing the packet filter process.

92. (new) The method of claim 91, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system performing the packet filter process.

93. (new) The method of claim 91, wherein the light source is controlled to selectively blink depending on the operation or status of the system performing the packet filter process.

94. (new) The method of claim 93, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on the internal computing system.

95. (new) The method of claim 91, wherein the at least one light source comprises an LED.

96. (new) The method of claim 83, wherein the one or more visual or audio feedback devices comprise a speaker.

REMARKS

In response to the notice to file missing parts mailed November 15, 2010, Applicant is submitting under separate cover a response to the notice. In addition, by this preliminary amendment Applicant is canceling claims 1-66 and adding new claims 67-96.

No new matter has been added.

Please charge any additional fees due, or credit any overpayment, to Deposit Account No. 50-0251.

Respectfully submitted

Alan R. Loudermilk

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given **TWO MONTHS** from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The statutory basic filing fee is missing.
Applicant must submit \$165 to complete the basic filing fee for a small entity.
- The oath or declaration is unsigned.

The following item(s) appear to have been omitted from the application:

- Figure(s) 5 described in the specification.

Applicant must reply to this notice within the time period set forth in this notice to avoid abandonment of this application. Applicant must select one of the three following options and the reply must comply with the requirements set forth in the selected option and any other requirements set forth in this notice. The reply should also indicate which option applicant has selected.

I. Petition for date of deposit: Should applicant contend that the above-noted omitted item(s) was in fact deposited in the U.S. Patent and Trademark Office (USPTO) with the nonprovisional application papers, a copy of this Notice and a petition (and \$400.00 petition fee (37 CFR 1.17(f))) with evidence of such deposit must be filed within **TWO MONTHS** of the date of this Notice. The petition fee will be refunded if it is determined that the item(s) was received by the USPTO. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b).**

II. Petition for later filing date: Should applicant desire to supply the omitted item(s) and accept the date that such omitted item(s) was filed in the USPTO as the filing date of the above-identified application, a copy of this Notice, the omitted item(s) (with a supplemental oath or declaration in compliance with 37 CFR 1.63 and 1.64 referring to such items), and a petition under 37 CFR 1.182 (with the \$400.00 petition fee (37 CFR 1.17(f))) requesting the later filing date must be filed within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b).**

Applicant is advised that generally the filing fee required for an application is the filing fee in effect on the filing date accorded the application and that payment of the requisite basic filing fee on a date later than the filing date

of the application requires payment of a surcharge (37 CFR 1.16(f)). To avoid processing delays and payment of a surcharge, applicant should submit any balance due for the requisite filing fee based on the later filing date being requested when submitting the omitted item(s) and the petition (and petition fee) requesting the later filing date.

III. Acceptance of application as deposited: Applicant may accept the application as deposited in the USPTO by filing an appropriate amendment as set forth in either (A) or (B) below within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b)**. The application will maintain a filing date as of the date of deposit of the application papers in the USPTO, and original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the date of deposit. A petition is not required for this option.

(A) If applicant wants to accept the application as deposited without adding the subject matter that was in the omitted item (e.g., a missing page or figure), applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. For a missing page of the specification,
 - a) a substitute specification including claims that amends the specification to renumber the pages consecutively and cancels any incomplete sentences, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. For a missing figure of the drawings,
 - a) replacement drawing sheets in compliance with 37 CFR 1.121(d) to renumber the drawing figures consecutively (if necessary).
 - b) a substitute specification excluding claims that amends the specification to cancel any references to any omitted drawing(s) and corrects the references in the specification to the drawing figures to correspond with any relabeled drawing figures, and
 - c) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
3. For a missing page of the claim listing only, a replacement claim listing with the claims renumbered consecutively or, if amendment to the claims is also necessary, then a complete claim listing in compliance with 37 CFR 1.121(c);
4. For a missing or unreadable compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the compact disc and the files contained on the compact disc, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
5. For a missing or unreadable file submitted on a compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the missing or unreadable file, and a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
 - b) a replacement transmittal letter listing all of the files except the missing or unreadable file in compliance with 37 CFR 1.52(e)(3)(ii).

(B) Alternatively, if applicant wants to accept the application as deposited but wishes to add the subject matter in the omitted item (e.g., a missing page or figure) by relying on an incorporation by reference under 37 CFR 1.57 or other portions of the original disclosure, applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. To add the subject matter in a missing page of specification,
 - a) a substitute specification excluding claims and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. To add a missing figure of the drawings, new and replacement drawing sheets in compliance with 37 CFR 1.121(d);

3. To add the subject matter in a missing page of the claim listing, a complete claim listing in compliance with 37 CFR 1.121(o) (e.g., a claim in the missing page should be submitted as a new claim);
4. To add the subject matter in a missing or unreadable compact disc,
 - a) a replacement compact disc and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4); and,
5. To add the subject matter in a missing or unreadable file submitted on a compact disc,
 - a) a replacement compact disc that contains all of the files listed in the specification including the missing or unreadable file and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4).

If applicant is relying on an incorporation by reference under 37 CFR 1.57 to add the omitted subject matter, then applicant must also comply with the requirements of 37 CFR 1.57.

Applicant is cautioned that correction of the above items may cause the specification and drawings page count to exceed 100 pages. If the specification and drawings exceed 100 pages, applicant will need to submit the required application size fee.

The applicant needs to satisfy supplemental fees problems indicated below.

The required item(s) identified below must be timely submitted to avoid abandonment:

- Additional claim fees of \$1196 as a small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16(f) of \$65 for a small entity in compliance with 37 CFR 1.27, must be submitted with the missing items identified in this notice.

SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is \$1806 for a small entity

- \$165 Statutory basic filing fee.
- \$65 Surcharge.
- The application search fee has not been paid. Applicant must submit \$270 to complete the search fee.
- The application examination fee has not been paid. Applicant must submit \$110 to complete the examination fee for a small entity in compliance with 37 CFR 1.27.
- Total additional claim fee(s) for this application is \$1196
 - \$1196 for 45 total claims over 20.

SCORE Placeholder Sheet for IFW Content

Application Number: **12807641**

Document Date: **03/24/2011**

The presence of this form in the IFW record indicates that the following document type was received in paper and is scanned and stored in the SCORE database.

- Drawings

Images of the original documents are scanned in gray scale or color and stored in SCORE. Bi-tonal images are also stored in IFW. Defects visible in both IFW and SCORE are indicative of defects in the original paper documents.

To access the documents in the SCORE database, refer to instructions developed by SIRA.

At the time of document entry (noted above):

- Examiners may access SCORE content via the eDAN interface.
- Other USPTO employees can bookmark the current SCORE URL (<http://es/ScoreAccessWeb/>).
- External customers may access SCORE content via the Public and Private PAIR interfaces.

Form Revision Date: December 8, 2006

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

FILING RECEIPT

OC00000044025810

Date Mailed: 10/20/2010

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. **If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections**

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER**Title 35, United States Code, Section 184****Title 37, Code of Federal Regulations, 5.11 & 5.15****GRANTED**

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

page 2 of 3

Ex.1002

CISCO SYSTEMS, INC. / Page 184 of 256

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment.

- The statutory basic filing fee is missing. Applicant must submit \$165 to complete the basic filing fee for a small entity.
The oath or declaration is unsigned.

The following item(s) appear to have been omitted from the application:

- Figure(s) 5 described in the specification.

Applicant must reply to this notice within the time period set forth in this notice to avoid abandonment of this application. Applicant must select one of the three following options and the reply must comply with the requirements set forth in the selected option and any other requirements set forth in this notice.

I. Petition for date of deposit: Should applicant contend that the above-noted omitted item(s) was in fact deposited in the U.S. Patent and Trademark Office (USPTO) with the nonprovisional application papers, a copy of this Notice and a petition (and \$400.00 petition fee (37 CFR 1.17(f))) with evidence of such deposit must be filed within TWO MONTHS of the date of this Notice.

II. Petition for later filing date: Should applicant desire to supply the omitted item(s) and accept the date that such omitted item(s) was filed in the USPTO as the filing date of the above-identified application, a copy of this Notice, the omitted item(s) (with a supplemental oath or declaration in compliance with 37 CFR 1.63 and 1.64 referring to such items), and a petition under 37 CFR 1.182 (with the \$400.00 petition fee (37 CFR 1.17(f))) requesting the later filing date must be filed within TWO MONTHS of the date of this Notice.

Applicant is advised that generally the filing fee required for an application is the filing fee in effect on the filing date accorded the application and that payment of the requisite basic filing fee on a date later than the filing date

of the application requires payment of a surcharge (37 CFR 1.16(f)). To avoid processing delays and payment of a surcharge, applicant should submit any balance due for the requisite filing fee based on the later filing date being requested when submitting the omitted item(s) and the petition (and petition fee) requesting the later filing date.

III. Acceptance of application as deposited: Applicant may accept the application as deposited in the USPTO by filing an appropriate amendment as set forth in either (A) or (B) below within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b)** . The application will maintain a filing date as of the date of deposit of the application papers in the USPTO, and original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the date of deposit. A petition is not required for this option.

(A) If applicant wants to accept the application as deposited without adding the subject matter that was in the omitted item (e.g., a missing page or figure), applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. For a missing page of the specification,
 - a) a substitute specification including claims that amends the specification to renumber the pages consecutively and cancels any incomplete sentences, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. For a missing figure of the drawings,
 - a) replacement drawing sheets in compliance with 37 CFR 1.121(d) to renumber the drawing figures consecutively (if necessary),
 - b) a substitute specification excluding claims that amends the specification to cancel any references to any omitted drawing(s) and corrects the references in the specification to the drawing figures to correspond with any relabeled drawing figures, and
 - c) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
3. For a missing page of the claim listing only, a replacement claim listing with the claims renumbered consecutively or, if amendment to the claims is also necessary, then a complete claim listing in compliance with 37 CFR 1.121(c);
4. For a missing or unreadable compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the compact disc and the files contained on the compact disc, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
5. For a missing or unreadable file submitted on a compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the missing or unreadable file, and a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
 - b) a replacement transmittal letter listing all of the files except the missing or unreadable file in compliance with 37 CFR 1.52(e)(3)(ii).

(B) Alternatively, if applicant wants to accept the application as deposited but wishes to add the subject matter in the omitted item (e.g., a missing page or figure) by relying on an incorporation by reference under 37 CFR 1.57 or other portions of the original disclosure, applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. To add the subject matter in a missing page of specification,
 - a) a substitute specification excluding claims and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. To add a missing figure of the drawings, new and replacement drawing sheets in compliance with 37 CFR 1.121(d);

3. To add the subject matter in a missing page of the claim listing, a complete claim listing in compliance with 37 CFR 1.121(c) (e.g., a claim in the missing page should be submitted as a new claim);
4. To add the subject matter in a missing or unreadable compact disc,
 - a) a replacement compact disc and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4); and,
5. To add the subject matter in a missing or unreadable file submitted on a compact disc,
 - a) a replacement compact disc that contains all of the files listed in the specification including the missing or unreadable file and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4).

If applicant is relying on an incorporation by reference under 37 CFR 1.57 to add the omitted subject matter, then applicant must also comply with the requirements of 37 CFR 1.57.

Applicant is cautioned that correction of the above items may cause the specification and drawings page count to exceed 100 pages. If the specification and drawings exceed 100 pages, applicant will need to submit the required application size fee.

The applicant needs to satisfy supplemental fees problems indicated below.

The required item(s) identified below must be timely submitted to avoid abandonment:

- Additional claim fees of **\$1196** as a small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16(f) of **\$65** for a small entity in compliance with 37 CFR 1.27, must be submitted with the missing items identified in this notice.

SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is **\$1806** for a small entity

- **\$165** Statutory basic filing fee.
- **\$65** Surcharge.
- The application search fee has not been paid. Applicant must submit **\$270** to complete the search fee.
- The application examination fee has not been paid. Applicant must submit **\$110** to complete the examination fee for a small entity in compliance with 37 CFR 1.27.
- Total additional claim fee(s) for this application is **\$1196**
 - **\$1196** for **46** total claims over 20.

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as

set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

CONFIRMATION NO. 3474
FORMALITIES LETTER

Date Mailed: 10/20/2010

NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment.

- The statutory basic filing fee is missing. Applicant must submit \$165 to complete the basic filing fee for a small entity.
The oath or declaration is unsigned.

The following item(s) appear to have been omitted from the application:

- Figure(s) 5 described in the specification.

Applicant must reply to this notice within the time period set forth in this notice to avoid abandonment of this application. Applicant must select one of the three following options and the reply must comply with the requirements set forth in the selected option and any other requirements set forth in this notice.

I. Petition for date of deposit: Should applicant contend that the above-noted omitted item(s) was in fact deposited in the U.S. Patent and Trademark Office (USPTO) with the nonprovisional application papers, a copy of this Notice and a petition (and \$400.00 petition fee (37 CFR 1.17(f))) with evidence of such deposit must be filed within TWO MONTHS of the date of this Notice.

II. Petition for later filing date: Should applicant desire to supply the omitted item(s) and accept the date that such omitted item(s) was filed in the USPTO as the filing date of the above-identified application, a copy of this Notice, the omitted item(s) (with a supplemental oath or declaration in compliance with 37 CFR 1.63 and 1.64 referring to such items), and a petition under 37 CFR 1.182 (with the \$400.00 petition fee (37 CFR 1.17(f))) requesting the later filing date must be filed within TWO MONTHS of the date of this Notice.

Applicant is advised that generally the filing fee required for an application is the filing fee in effect on the filing date accorded the application and that payment of the requisite basic filing fee on a date later than the filing date

of the application requires payment of a surcharge (37 CFR 1.16(f)). To avoid processing delays and payment of a surcharge, applicant should submit any balance due for the requisite filing fee based on the later filing date being requested when submitting the omitted item(s) and the petition (and petition fee) requesting the later filing date.

III. Acceptance of application as deposited: Applicant may accept the application as deposited in the USPTO by filing an appropriate amendment as set forth in either (A) or (B) below within **TWO MONTHS** of the date of this Notice. **THIS TWO MONTH PERIOD IS EXTENDABLE UNDER 37 CFR 1.136(a) or (b)** . The application will maintain a filing date as of the date of deposit of the application papers in the USPTO, and original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the date of deposit. A petition is not required for this option.

(A) If applicant wants to accept the application as deposited without adding the subject matter that was in the omitted item (e.g., a missing page or figure), applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. For a missing page of the specification,
 - a) a substitute specification including claims that amends the specification to renumber the pages consecutively and cancels any incomplete sentences, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. For a missing figure of the drawings,
 - a) replacement drawing sheets in compliance with 37 CFR 1.121(d) to renumber the drawing figures consecutively (if necessary),
 - b) a substitute specification excluding claims that amends the specification to cancel any references to any omitted drawing(s) and corrects the references in the specification to the drawing figures to correspond with any relabeled drawing figures, and
 - c) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
3. For a missing page of the claim listing only, a replacement claim listing with the claims renumbered consecutively or, if amendment to the claims is also necessary, then a complete claim listing in compliance with 37 CFR 1.121(c);
4. For a missing or unreadable compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the compact disc and the files contained on the compact disc, and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
5. For a missing or unreadable file submitted on a compact disc,
 - a) a substitute specification (excluding the claims) deleting the reference to the missing or unreadable file, and a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125; and
 - b) a replacement transmittal letter listing all of the files except the missing or unreadable file in compliance with 37 CFR 1.52(e)(3)(ii).

(B) Alternatively, if applicant wants to accept the application as deposited but wishes to add the subject matter in the omitted item (e.g., a missing page or figure) by relying on an incorporation by reference under 37 CFR 1.57 or other portions of the original disclosure, applicant is required to submit one or more of the following items without adding any new matter (see 35 U.S.C. 132(a)):

1. To add the subject matter in a missing page of specification,
 - a) a substitute specification excluding claims and
 - b) a statement that the substitute specification includes no new matter, in compliance with 37 CFR 1.121(b)(3) and 1.125;
2. To add a missing figure of the drawings, new and replacement drawing sheets in compliance with 37 CFR 1.121(d);

3. To add the subject matter in a missing page of the claim listing, a complete claim listing in compliance with 37 CFR 1.121(c) (e.g., a claim in the missing page should be submitted as a new claim);
4. To add the subject matter in a missing or unreadable compact disc,
 - a) a replacement compact disc and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4); and,
5. To add the subject matter in a missing or unreadable file submitted on a compact disc,
 - a) a replacement compact disc that contains all of the files listed in the specification including the missing or unreadable file and a duplicate copy of the compact disc, in compliance with 37 CFR 1.52(e); and
 - b) a statement that the replacement compact disc contains no new matter in compliance with 37 CFR 1.52(e)(4).

If applicant is relying on an incorporation by reference under 37 CFR 1.57 to add the omitted subject matter, then applicant must also comply with the requirements of 37 CFR 1.57.

Applicant is cautioned that correction of the above items may cause the specification and drawings page count to exceed 100 pages. If the specification and drawings exceed 100 pages, applicant will need to submit the required application size fee.

The applicant needs to satisfy supplemental fees problems indicated below.

The required item(s) identified below must be timely submitted to avoid abandonment:

- Additional claim fees of **\$1196** as a small entity, including any required multiple dependent claim fee, are required. Applicant must submit the additional claim fees or cancel the additional claims for which fees are due.
- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16(f) of **\$65** for a small entity in compliance with 37 CFR 1.27, must be submitted with the missing items identified in this notice.

SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is **\$1806** for a small entity

- **\$165** Statutory basic filing fee.
- **\$65** Surcharge.
- The application search fee has not been paid. Applicant must submit **\$270** to complete the search fee.
- The application examination fee has not been paid. Applicant must submit **\$110** to complete the examination fee for a small entity in compliance with 37 CFR 1.27.
- Total additional claim fee(s) for this application is **\$1196**
 - **\$1196** for **46** total claims over 20.

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

INVENTOR AND SPECIFICATION IDENTIFICATION

My residence, post office address and citizenship are as stated below next to my name. I believe that I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

REAL TIME FIREWALL/DATA PROTECTION SYSTEMS AND METHODS

TITLE OF INVENTION

the specification of which:

 X is attached hereto.

 was filed on _____ as Application Serial No. _____
and was amended on _____ (if applicable).

 was described and claimed in PCT International Application No. _____ filed on _____
and amended under PCT Article 19 on _____ (if any).

REVIEW OF PAPERS AND ACKNOWLEDGMENT OF DUTY OF CANDOR

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I do not know and do not believe that the invention claimed in the above-identified specification was ever known or used in the United States of America before my or our invention thereof, or patented or described in any printed publication in any country before my or our invention thereof or more than one year prior to this application, and that the same was not in public use or on sale in the United States of America more than one year prior to this application.

I acknowledge the duty to disclose to the Patent and Trademark Office information which I know is material to the patentability of this application in accordance with Title 37, Code of Federal Regulations, § 1.56.

FOREIGN APPLICATIONS AND PRIORITY CLAIM

The invention claimed in the above-described specification has not been patented or made the subject of an inventor's certificate issued before the date of this application in any country foreign to the United States of America on an application filed by me or my legal representatives or assigns more than twelve months prior to this application. I hereby claim foreign priority benefits under Title 35, United States Code, § 119 of any foreign application(s) for patent or inventor's certificate or of any PCT international application(s) designating at least one country other than the United States of America listed below and have also identified below any foreign application(s) for patent or inventor's certificate or any PCT international application(s) designating at least

Loudermilk & Associates o 10950 North Blaney Avenue Suite B o Cupertino, California 95014

one country other than the United States of America filed by me on the same subject matter having a filing date before that of the application(s) of which priority is claimed.

COUNTRY	APPLICATION NUMBER	DATE OF FILING (day, month, year)	PRIORITY CLAIMED UNDER 37 USC 119
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No
			<input type="checkbox"/> Yes <input type="checkbox"/> No

DOMESTIC PRIORITY CLAIM

I hereby claim the benefit under Title 35, United States Code, § 120 of any United States patent application(s) listed below and, insofar as this application discloses or claims subject matter in addition to that disclosed in the below listed priority applications, I acknowledge the duty to disclose to the Patent and Trademark Office all information known by me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date(s) of the below-listed prior application(s) and the national or PCT international filing date of this application.

(APPLICATION SERIAL NO.) (FILING DATE) (STATUS: PATENTED, PENDING, ABANDONED)

(APPLICATION SERIAL NO.) (FILING DATE) (STATUS: PATENTED, PENDING, ABANDONED)

POWER OF ATTORNEY

I hereby appoint Alan R. Loudermilk (Reg. No. 32,788), who is registered to practice before the Patent and Trademark Office, as my attorney with full power of substitution and revocation, to prosecute this application, to make alterations or amendments therein, to receive the patent and transact all business in the Patent and Trademark Office connected therewith.

All **CORRESPONDENCE** should be addressed to:

Loudermilk & Associates
10950 N. Blaney Avenue Suite B
Cupertino, CA 95014

All **TELEPHONE INQUIRIES** may be directed to Alan R. Loudermilk at (408) 342-1866.

I hereby declare I have read this Declaration, and that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

REAL TIME FIREWALL/DATA PROTECTION SYSTEMS AND METHODS

This application is a continuation of U.S. App. Ser. 11/374,465, filed March 13, 2006, which is a continuation of U.S. App. Ser. No. 09/611,775, filed July 7, 2000, now U.S. Patent No. 7,013,482.

5 **Field of the Invention**

The present invention relates to computer security and data protection systems and methods, and more particularly to firewall and data protection systems and methods for filtering packets, such as from the Internet, in real time and without packet buffering.

10 **Background of the Invention**

The use of the Internet has exploded in recent years. Small and large companies as well as individual users are spending more time with their computers connected to the Internet. With the advent of Internet technologies, such as cable modems, digital subscriber lines, and other “broadband” access devices, users are connecting their computers to the Internet for extended
15 periods of time.

Such extended or “persistent” connection to the Internet brings many advantages to users in immediate access to the content on the Internet through the use of email, search engines, and the like. Unfortunately, however, persistent access to the Internet exposes connected computers to potential security threats, where intruders and “hackers” may compromise proprietary systems,
20 engage in information theft, or take control of the connected computers remotely. With more sophisticated tools at their disposal, hackers pose security and privacy risks to systems with persistent access to the Internet. Such security risks are even present for computers connected to the Internet for limited periods of time (such as through dial-up, modem connections), though to a lesser degree than the extended access computers.

25 There are currently many different types of firewall systems available on the market, including proxy servers, application gateways, stateful inspection firewalls, and packet filtering firewalls, each of which provides a variety of strategies and services for data protection. Conventional packet filters typically are computers, routers, or ASICs based on general purpose CPUs. They perform their filtering duties by receiving a packet, buffering the data until a
30 determination can be made, and forwarding the packet as applicable for the particular system. For example, a dual-homed, Linux-based filter with two network cards might receive a packet

completely, evaluate whether it meets specific criteria, and transmit the packet on the other network card. In another example, a router designed for switch mode routing might begin buffering a packet until a decision is made, then forward the packet on the applicable interface while still receiving the packet. With most packet filters, software is used and data is buffered.

5 Sophisticated computer users working for medium- to large-sized companies have a variety of relatively expensive protection devices and tools at their disposal. Such devices and tools typically screen data packets received from the Internet with sophisticated software-based filtering techniques. Using relatively complex tools for software analysis, each packet is stored in a buffer and examined sequentially with software-based rules, which results in each packet being
10 either accepted (and passed to the computer) or rejected (and disposed of by the software). This software often requires substantial computer knowledge and experience. Users of such devices and tools typically have an expertise in network administration or a similar field, so they can configure, optimize, and even build the complex filtering and security options provided by the software.

15 While such devices and tools can be quite effective in providing “firewall” protection for sophisticated users of large office systems, they pose several barriers to unsophisticated users of small office and home systems in the growing SOHO market. Current large office systems are expensive, difficult to set up, and require technical skills. What is needed for SOHO systems is a relatively inexpensive, uncomplicated, “plug and play” type of Internet protection system that can
20 be easily connected and configured by relatively unsophisticated users.

Summary of the Invention

In accordance with the present invention, devices, methods and systems are provided for the filtering of Internet data packets in real time and without packet buffering. A stateful packet
25 filtering hub is provided in accordance with preferred embodiments of the present invention. The present invention also could be implemented as part of a switch or incorporated into a router.

A packet filter is a device that examines network packet headers and related information, and determines whether the packet is allowed into or out of a network. A stateful packet filter, however, extends this concept to include packet data and previous network activity in order to
30 make more intelligent decisions about whether a packet should be allowed into or out of the network. An Ethernet hub is a network device that links multiple network segments together at

the medium level (the medium level is just above the physical level, which connects to the network cable), but typically provides no capability for packet-type filtering. As is known, when a hub receives an Ethernet packet on one connection, it forwards the packet to all other links with minimal delay and is accordingly not suitable as a point for making filtering-type decisions. This
5 minimum delay is important since Ethernet networks only work correctly if packets travel between hosts (computers) in a certain amount of time.

In accordance with the present invention, as the data of a packet comes in from one link (port), the packet's electrical signal is reshaped and then transmitted down other links. During this process, however, a filtering decision is made between the time the first bit is received on the
10 incoming port and the time the last bit is transmitted on the outgoing links. During this short interval, a substantial number of filtering rules or checks are performed, resulting in a determination as to whether the packet should or should not be invalidated by the time that the last bit is transmitted. To execute this task, the present invention performs multiple filtering decisions simultaneously: data is received; data is transmitted; and filtering rules are examined in
15 parallel and in real time. For example, on a 100 Mbit/sec Ethernet network, 4 bits are transmitted every 40 nano seconds (at a clock speed of 25 MHz). The present invention makes a filtering decision by performing the rules evaluations simultaneously at the hardware level, preferably with a programmable logic device.

The present invention may employ a variety of networking devices in order to be
20 practical, reliable and efficient. In addition, preferred embodiments of the present invention may include constituent elements of a stateful packet filtering hub, such as microprocessors, controllers, and integrated circuits, in order to perform the real time, packet-filtering, without requiring buffering as with conventional techniques. The present invention preferably is reset, enabled, disabled, configured and/or reconfigured with relatively simple toggles or other physical
25 switches, thereby removing the requirement for a user to be trained in sophisticated computer and network configuration. In accordance with preferred embodiments of the present invention, the system may be controlled and/or configured with simple switch activation(s).

Accordingly, one object of the present invention is to simplify the configuration requirements and filtering tasks of Internet firewall and data protection systems.

Another object is to provide a device, method and system for Internet firewall and data protection that does not require the use of CPU-based systems, operating systems, device drivers, or memory bus architecture to buffer packets and sequentially carry out the filtering tasks.

5 A further object of the present invention is to perform the filtering tasks of Internet firewall protection through the use of hardware components.

Another object is to utilize programmable logic for filtering tasks.

Still another object is to provide a device, method, and system to carry out bitstream filtering tasks in real time.

10 Yet another object is to perform parallel filtering, where packet data reception, filtering, and transmission are conducted simultaneously.

A further object of the present invention is to perform the filtering tasks relatively faster than current state-of-the-art, software-based firewall/data protection systems.

Another object is to provide a device, method and system for firewall protection without the use of a buffer or temporary storage area for packet data.

15 Still another object of the present invention is to design a device, method and system that does not require software networking configurations in order to be operational.

A further object of the present invention is to provide a device, method and system for Internet firewall and data security protection that supports partitioning a network between client and server systems.

20 It is a yet another object of the present invention to provide a device, method and system for Internet firewall and data protection that supports multiple networking ports.

Another object is to maintain stateful filtering support for standard data transmission protocols on a per port basis.

25 Still another object of is to configure network functionality using predefined toggles or other types of physical switches.

A further object of the present invention is to conduct packet filtering without requiring a MAC address or IP address to perform packet filtering.

Yet another object of the present invention is to facilitate the shortest time to carry out bitstream filtering tasks.

Finally, it is another object of the present invention to be able to perform filtering rules out of order and without the current state-of-the-art convention of prioritizing the filtering rules serially.

5 **Brief Description of the Drawings**

The present invention may be more fully understood by a description of certain preferred embodiments in conjunction with the attached drawings in which:

FIGS. 1A and 1B are application level diagrams illustrating exemplary data protection systems in accordance with the present invention;

10 FIG. 2 is a flow diagram illustrating the components and operations of a preferred embodiment of the present invention;

FIG. 3 is a flow chart illustrating the basic functions of a repeater core and four filter levels in accordance with preferred embodiments of the present invention;

15 FIG. 4 is a diagram illustrating filtering functions of Level 2 filters in relation to the flow of packet data from internal and external networks in accordance with preferred embodiments of the present invention;

FIG. 5 is a flow chart illustrating packet filtering functions of Level 3 filters in accordance with preferred embodiments of the present invention;

20 FIG. 6 illustrates the rules by which TCP and UDP packets are evaluated in parallel in accordance with preferred embodiments of the present invention;

FIG. 7 is a diagram illustrating parallel rule evaluation for TCP and UDP packets in accordance with preferred embodiments of the present invention;

FIG. 8 is a flow chart illustrating packet filtering functions of Level 4 filters in accordance with preferred embodiments of the present invention;

25 FIG. 9 is a block diagram of the hardware components of a preferred embodiment of the present invention;

FIG. 10 is an illustration of an exemplary design of an external case in accordance with preferred embodiments of the present invention;

30 FIGS. 11 and 12 are flow diagrams illustrating SYN flood protection in accordance with preferred embodiments of the present invention; and

FIG. 13 is a flow chart illustrating the process of “garbage collection” in flood lists in accordance with preferred embodiments of the present invention.

Detailed Description of the Preferred Embodiments

5 The present invention will be described in greater detail with reference to certain preferred and alternative embodiments. As described below, refinements and substitutions of the various embodiments are possible based on the principles and teachings herein.

FIG. 1A and FIG. 1B illustrate the physical positioning of a stateful packet filtering hub in accordance with the present invention in two exemplary network configurations. The packet
10 filtering hub of the illustrated embodiments preferably serves as an Internet firewall/data protection system (hereafter “data protection system”).

With reference to FIG. 1A, in the illustrated embodiment data protection system 1 is coupled through a port to router 2 (or cable modem or other preferably broadband, persistent network connection access device), which is linked through a broadband connection to other
15 computer systems and networks, exemplified by Internet 8 and Internet Service Provider (ISP) 10. Packets of data are transmitted from an ISP, such as ISP 10, via Internet 8 to router 2. The packets are transmitted to data protection system 1, which analyzes the packets in “real time” and without buffering of the packets, while at the same time beginning the process of transmitting the packet to the internal network(s) in compliance with the timing requirements imposed by the
20 Ethernet or other network standards/protocols. If a packet of data satisfies the criteria of the rules-based filtering performed within data protection system 1, which is executed in a manner to be completed by the time the entire packet has been received by data protection system 1, then it is allowed to pass to hub 6 as a valid packet, which may then relay the cleared packet to computers 4a, 4b, 4c, etc. on the internal network. If a packet of data fails to meet the filtering
25 criteria, then it is not allowed to pass as a valid packet and is “junked.” Junking is defined as changing bits or truncating data, depending on the type of link, in a manner such that the packet is corrupted or otherwise will be detected by the receiving computers as invalid or unacceptable, etc. Without the intermediate positioning of data protection system 1, the packets would be transmitted directly to unprotected hub 6, thereby exposing computers 4a, 4b and 4c to security
30 risks. It should also be noted that hub 6 is optional in accordance with the present invention; in other embodiments, data protection system 1 may be directly connected to a single computer or

may have multiple ports that connect to multiple computers. Similar filtering is performed on packets that are to be transmitted from computers 4a, 4b, and 4c to Internet 8.

With reference to FIG 1B, in this illustrated embodiment data protection system 1 is coupled via one port to DSL router 2 (again, the network access device is not limited to a DSL router, etc.), which provides the broadband connection to Internet 8. As with the embodiment of FIG. 1A, data protection system 1 also is coupled to a number of computers 4a, 4b, etc., on the internal network, and serves to provide filtering for packets between computers 4a and 4b and Internet 8 in the manner described in connection with FIG. 1A. In this embodiment, data protection system 1 is also connected via another port to hub 6, which serves as the main point of contact for incoming connections from the Internet for bastion hosts 5a and 5b, etc. In accordance with this embodiment, packets are transmitted to router 2 and then to data protection system 1. If the packets are approved by data protection system 1 (i.e., passing the filtering rules/checks performed with data protection system 1 while the packet is being received and transmitted), then the packets are allowed to pass as valid packets to computers 4a, 4b and hub 6. (The rules-based filtering process of preferred embodiments of the present invention will be described in more detail hereinafter.) Hub 6 may relay the packets to other internal host computers 5a, 5b, etc., on the local area network (LAN). These computers may include, for example, a Web and FTP server 5a, or a streaming audio server 5b, etc. Thus, in accordance with the illustrated embodiment, packets that passed the filtering rules/checks are passed as valid packets to computers, such as protected internal host computer 4a, which as illustrated may be connected to printer 7. In this particular embodiment, a bastion port is provided that may be used to service more than one bastion host. In other embodiments, different network configurations may be utilized in accordance with the present invention.

FIG. 2 illustrates the general components and operations of certain preferred embodiments of the present invention. Connection to external network 12 is made by physical interface 14. Physical interface (or PHY) 14 preferably is implemented with commercially available, physical layer interface circuits, as are known in the art (such physical layer interface circuits may be off-the-shelf components, as specified in the Ethernet IEEE standard 802.3u.). At a minimum, the data protection system must contain two PHY interfaces, one for the Internet or other external network connection, and one (or more) for the internal network. It should be noted that, in preferred embodiments, PHY controllers are utilized, which implicitly assumes Ethernet-

type connections. In other embodiments in accordance with the present invention, other types of PHY interfaces and controllers are utilized for different networking standards.

Repeater core 16 functions as an Ethernet repeater (as defined by the network protocols of the IEEE standard 802.3) and serves to receive packets from external PHY 14, reshape the electrical signals thereof, and transmit the packets to internal PHY 18, which is coupled to internal network 20. While the packet is being received, reshaped, and transmitted between PHYs 14 and 18, however, it is simultaneously being evaluated in parallel with filtering rules to determine if it should be allowed to pass as a valid packet (as will be described in greater detail elsewhere herein). As with the discussion regarding the PHY interfaces and controllers, changes in networking standards may alter the components functionality (such as the characteristics of repeater core 16), but not the basic parallel, real time packet filtering in accordance with the present invention. (In an alternate embodiment, for example, the data protection system may use switch logic or router logic; in full duplex, the same principles apply.)

The parallel filtering preferably consists of packet characteristics logic 22, packet type filters 26, and state rules filters 42. Packet characteristics logic 22 determines characteristics based on packet data (preferably in the form of 4-bit nibbles from PHY 14), whereas packet type filters 26 make filtering decisions generally based on packet type. State rules filters 42 perform rules- based filtering on several levels simultaneously. The results of filtering by packet type filters 26 and state rules filters 42 are combined by aggregator 24, which may be considered a type of logical operation of pass/fail signals (described in greater detail elsewhere herein). In preferred embodiments, if any one or more of the performed filtering rules indicates that the packet should be failed (or not allowed to pass as a valid packet), then the output of aggregator 24 is a fail; otherwise, the packet is allowed and the output of aggregator 24 is a pass. Thus, as packet data is being received and transmitted from PHY 14 to PHY 18 via repeater core 16, it is being evaluated in parallel via packet type filters 26 and state rules filters 42 (depending in part on packet characteristics determined by logic 22 from the data received from PHY 14). In accordance with the present invention, the results of filtering by packet type filters 26 and state rules filters 42 are provided to aggregator 24 by the time that the entire packet reaches repeater core 16, so that, based on the output of aggregator 24, the packet will either be allowed to pass as a valid packet or will be failed and junked as a suspect (or otherwise invalidated) packet.

Packet characteristics logic 22 receives packet data from PHY 14 and examines the packet data to determine characteristics, such as the packet type, datagram boundaries, packet start, packet end, data offset counts, protocols, flags, and receiving port. The packet type may include, for example, what are known in the art as IP, TCP, UDP, ARP, ICMP, or IPX/SPX.

5 Such packet characteristics data is provided to packet type filters 26. Packet type filters 26 preferably make a decision about whether the packet should be passed or failed, with the result being transmitted to aggregator 24. In accordance with preferred embodiments, packet type filters 26 do not require the use of what may be considered an extensible rules system. The filters of packet type filters 26 preferably are expressed as fixed state machines or may be expressed using
10 more flexible rules syntax. What is important is that packet type filtering is performed by filters 26 in the shortest time interval possible and in parallel with the packet data being received and transmitted to internal PHY 18, so that a pass/fail determination may be made prior to the time when the entire packet has been received by repeater core 16.

State rules filters 42 receive packet characteristics data from logic 22 and, based on this
15 data as well as cached/stored connection and communication state information, executes a plurality of rules under the control of rules controller 28, preferably using a plurality of rules engines 36-1 to 36-N, so that a desired set of filtering decisions are promptly made and a pass/fail determination occurs before the entire packet has been received by repeater core 16. State rules filters 42 preserve a cache of information 30 about past network activity (such as IP addresses for
20 established connections, port utilization, and the like), which is used to maintain network connection state information about which hosts have been exchanging packets and what types of packets they have exchanged, etc. Rules controller 28 preferably accesses rules map table 32 based on packet characteristics information, which returns rules dispatch information to rules controller 28. Thus, based on the connection state information stored in connection cache 30 and
25 the characteristics of the packet being examined, rules controller 28 initiates filtering rules via a plurality of rules engines 36-1 to 36-N that simultaneously apply the desired set of filtering rules in parallel. (Preferably, N is determined by the number of rules that need to be performed in the available time and the speed of the particular logic that is used to implement state rules filters 42.)

30 As will be appreciated, while the packet pass/fail decision is being made in real time, and thus must be concluded by the time that the entire packet has been received, a large of number of

filtering rules must be performed quickly and in parallel. Preferably, rules controller 28 utilizes a plurality of rules engines 36-1 to 36-N, which logically apply specific rules retrieved from corresponding storage areas 40-1 to 40-N. Rules controller 28, based on the connection state and packet characteristics, determines which rules should be run based on which information. The rules to be run are then allocated by rules controller 28 to the available rules engines 36-1 to 36-N. As each rules engine 36-1 to 36-N may be required to execute multiple rules in order to complete the filtering decision process in the required time, corresponding queues 34-1 to 34-N are preferably provided. Thus, rules controller 28 determines the list of rules that should be performed (again, depending on the stored connection state and packet characteristics data) and provides the list of rules (and accompanying information to carry out those rules) to the plurality of rules engines 36-1 to 36-N via queues 34-1 to 34-N. Rules engines 36-1 to 36-N, based on the information from the queues 34-1 to 34-N, look up specific rule information from storage areas 40-1 to 40-N, carry out the rules, and preferably return the results to rules controller 28. As the rules are essentially conditional logic statements that notify the data protection system how to react to a particular set of logical inputs, it has been determined that providing a plurality of rules engines may enable the necessary decision making process to quickly provide the outcome of the rules-based filtering by the time the entire packet has been received.

Still referring to FIG. 2, rules controller 28 preferably uses rules map table 32 to dispatch the rules to rules engines 36-1 and 36-N, so that a filtering decision may be reached in the optimal amount of time. In a preferred operation, each rules engine extracts a rule ID from its queue, looks up the rules definition in its own rules table 40-1 to 40-N, evaluates the rule, returns the result to rules controller 28, and looks for another rule ID in its queue 34-1 to 34-N. The results from packet type filter 26 and rules controller 28 are combined into one result via aggregator 24: pass or fail. If a decision is not reached before the end of the packet is transmitted, then in preferred embodiments the packet will be processed as an invalid packet and junked.

It should be appreciated that the data protection system must make a filtering determination before the current packet is completely transmitted. Since the networking standards impose strict timing thresholds on the transit delay of packets, filtering is performed in real time, in parallel and without buffering the packet. (The transit delay threshold is the time it takes to get from the transmitting station to the receiving station.) Given that a filtering decision must be made in real time (before the last bit is received and forwarded to the applicable

interfaces), the filter rules are evaluated in parallel by rules engines that possess independent, direct access to the rules set collected in storage areas 40-1 and 40-N, which are preferably implemented as RAM tables. (In a preferred embodiment of the data protection system, the tables are implemented using on-chip, dual port RAM up to 4K in size. A programmable logic device, such as Xilinx Spartan II XC2S100, has 40K dual port synchronous block RAM. For example, an initial 110-bit segment of the rules controller RAM block may be a range table that delineates where each look up code begins and what the number of entries are.) Rules controller 28 dispatches the rules to each rules engine by placing a rules ID entry in a queue. Because each rules engine is assigned its own queue, a pipeline is created allowing the rules engine to continuously run and operate at maximum efficiency.

To operate efficiently the rules engines must also be capable of evaluating rules in any order. In accordance with the preferred embodiments, each rule has a priority and the highest priority result is accepted. Therefore, the rules must be evaluated in any order yet still obtain the same result, as if the rules were being evaluated serially from highest to lowest priority. This operation is accomplished in preferred embodiments by rules map table 32, which notifies rules controller 28 which rule is assigned to which rules engine. Thus, this decision is statically determined by the rules set and the number of rules engines. It should be noted that the rule set in general is greater than the number of rules engines.

FIG. 3 is a flow chart illustrating further aspects of preferred embodiments of the present invention. As previously described, preferred embodiments of the data protection system utilize programmable logic, or other suitable preferably hardware-based logic, to perform a large number of filter rules in parallel and at high speed. Such embodiments may be considered to provide an external interface, for instance, to the Internet, to external network 12, and one or more internal network interfaces, such as to internal network 20 and/or to bastion network 15 (see, for example, FIGS. 1A and 1B). As repeater core 16 (or the PHYs in FIG. 2) receives and transmits packet data, the packet is simultaneously subjected to a plurality of filtering rules. At step 44, the packet characteristics are determined (which, as previously described, may include protocol, addresses, ports, flags, etc.). The filtering rules are based on the packet characteristics, connection state information (depending upon the particular rules), and/or toggle or other physical switch state information. This filtering process may be represented by filtering steps 46,

48, 50 and 52, which, as depicted in FIG. 3, are performed at least in substantial part in parallel, and thus can make filtering decisions by the time the packet has been completely received.

As illustrated, after the packets are transmitted to repeater core 16, their characteristics are analyzed at step 44. Data packets generally consist of several layers of protocols that combine to make a protocol stack. Preferably, each layer of the stack is decoded and the information is passed to various filter blocks, as exemplified in steps 46, 48, 50 and 52. In accordance with the present invention, this filtering process is executed in parallel and in real time. In other embodiments, a variety of filter blocks or rules-based filters may be employed, incorporating parallel execution, real time filtering, etc., as may be necessary to complete the filtering decision in the required time.

Referring again to preferred embodiments illustrated in FIG. 3, Level 2 filters at step 46 may examine information in the link layer header for all incoming packets and decide whether a packet should be junked based on the packet protocol. Level 3 filters at step 48 may examine information in the networking layer headers. (For the IP protocol, these headers would equate to the ARP, RARP, IP, ICMP, and IGMP protocol headers.) While Level 2 filters preferably distinguish the packet type, Level 3 filters at step 48 and Level 4 filters at step 50 preferably distinguish IP datagram characteristics. Level 4 filters at step 50 preferably operate by examining IP, TCP and UDP headers along with data transmitted between the client and server processes, utilizing two techniques: stateful and non-stateful packet filtering. (Level 2, 3 and 4 filters are described in greater detail elsewhere herein.) Preferably a spoof check filter at step 52 detects whether the packet originated from an authorized IP address or not. To determine whether the packet should be allowed to pass as a valid packet, the filters must implement rules in parallel preferably based on programmable logic and register one of two values: pass or fail. After the values are registered, the outcome is collected in result aggregator 24, which logically combines the results to determine if the packet should be allowed to pass as a valid packet or should be denied as an invalid one. If the packet is passed, then repeater core 16 continues to send correct bits. If the packet is failed, then it is junked.

In accordance with preferred embodiments of the present invention as illustrated in FIG. 3, a spoof check is performed at step 52 on all packets entering a port. To prevent IP spoofing, the spoof check filtering of step 52 monitors IP addresses from the internal network and discards any incoming packets with IP source addresses that match internal IP addresses. A spoof check

ensures that a host on one network is not trying to impersonate a computer on another network, such as a computer on the Internet assuming the IP address of a computer connected to an internal port. In accordance with preferred embodiments, spoofed packets are always junked by the data protection system. In such embodiments, the data protection system performs this check
5 by keeping track of the IP addresses of packets arriving on the internal and bastion ports. The source and destination addresses of each packet are checked against the known port addresses to ensure they are valid for the appropriate port.

FIG. 3 also illustrates alarm controller 53, which preferably is coupled to result aggregator 24. Alarm controller 53, which could be a separate logic block or within the result
10 aggregator, receives signals indicating when packets are being rejected, either directly from the logic performing the filtering or from result aggregator 24. As described in greater detail elsewhere herein, alarm controller 53 desirably is utilized to provide visual feedback of the system status or operation (such as whether the data protection system is under attack) via LED(s) 54 (or other light source, LCD or other type of alphanumeric or graphic display, etc.). For
15 instance, a LCD may provide an additional mechanism for entering security configurations, such as specific protocols to allow a reference clock. Alarm controller 53 also may be coupled to an audio feedback device, such as speaker 55, which similarly may be used to provide audio feedback of the system status or operation. For example, if a packet is rejected, a first visual indication may be provided via LED(s) 54 (e.g., yellow light); if packets are being rejected in a
20 manner or at a rate that suggests an internal computer is under attack, then a second visual indication may be provided via LED(s) 54 (e.g., a red light). Similarly, first and second tones or other audible indicators (different tones, volumes, sequences, etc.) may be provided via speaker 55 to indicate the detected condition). In preferred embodiments, such feedback, audio and/or visual, may maintain the alert state until reset by the user, such as by depressing a toggle. Thus, if
25 the internal system has been determined to be under attack while the user is away, this fact will be made known to the user when the user returns and sees and/or hears the visual and/or audio feedback. It also should be noted that alarm controller 53 also may generate a UDP packet (indicated by the dashed line that is coupled to internal network 20) that informs the internal client computer of the attack or suspected attack, thereby providing an additional optional
30 mechanism to inform the user of suspect activity.

FIG. 4 illustrates exemplary packet filtering functions of Level 2-type filtering in relation to the flow of packet data from internal and external networks. External PHY 12 receives packet electrical signals off the physical wire or other medium. Similarly, internal PHYs 18 and 58 receive packet electrical signals from internal network 20 or bastion network 15, respectively.

5 Packet data comes in from one of PHYs 12, 18 or 58 to PHY controller 56. PHY controller 56 in general receives incoming data from network PHYs 12, 18 or 58, detects collisions, indicates the start and end of packet data, and forwards the packet data to other appropriate components of the data protection system (such as described herein). From PHY controller 56, data from the packet being received, along with information indicating which PHYs are active (i.e., on which PHY a

10 packet is being received and to which PHYs the packet is being transmitted, etc.), and the packet is reshaped and transmitted in real-time via block 60 (i.e., the packet is not received into a buffer, after which it is sequentially processed to determine if the packet should be allowed to pass, etc., as in conventional firewalls). In the case of a packet received from Internet 8, the packet is received by PHY controller 56 from external PHY 12, and reshaped and transmitted in real-time

15 to the internal PHY 18 and/or bastion PHY 58.

As will be appreciated, block 60 in essence performs the repeater functionality of passing the incoming data to the non-active PHYs after reformatting the preamble. Block 60 also preferably receives “junk” or “pass” signals from the filtering components and a collision detection signal from PHY controller 56. In preferred embodiments, a “jam” signal is propagated

20 to each PHY upon detection of a collision. A packet is invalidated for all PHYs that belong to a network category that receives a “junk” signal. (For example, if the packet is invalidated for internal networks, then the packet is invalidated for all internal network ports.) Preferably, block 60 also receives a single output signal from result aggregator 24 for each PHY category (i.e., internal or external). As will be explained in greater detail hereinafter, result aggregator 24

25 generates the signals provided to block 60 depending on “junk” or “pass” signals from each filter component.

In accordance with the present invention, the packet is also simultaneously routed through a plurality of filtering steps. In the exemplary illustration of Level 2 filters in FIG. 4, the packet type is determined at step 64. At step 64, the network packet is examined to determine the

30 enclosed Level 3 datagram type, such as ARP, RARP, IP, or IPX. This information is used to perform Level 2 filtering and to decide how to deconstruct the enclosed datagram to perform

Level 3 filtering. If an unknown packet type is received from the external network, then the packet preferably is junked if filtering is enabled. Unknown packet types received from the internal network preferably are forwarded to other hosts on the internal network and may be forwarded to the bastion port but are not forwarded to the external network.

5 If it is a known packet type, then it is routed through additional filtering steps based on particular packet protocols. In the illustrated embodiment, at step 66, if the packet is an Address Resolution Protocol (ARP) type packet, then it is passed. At step 68, if the packet is a Reverse Address Resolution Protocol (RARP) type packet and is from external PHY 12 and the op code is 3, then it is junked; otherwise, it is passed as indicated at step 70. As is known in the art,
10 RARP generally is a protocol used by diskless workstations to determine their address; in accordance with preferred embodiments, RARP responses are the only RARP packets allowed to enter internal networks from external hosts. At step 72, if the packet is an Internet Protocol (IP) type packet, is from the external PHY and has been broadcast, then it is junked. (For example, broadcast packets from the external network preferably are not allowed; a broadcast packet is
15 determined by examining the IP address or the physical layer address). Otherwise, the process proceeds to step 74. Step 74 preferably examines the IP header, which contains a protocol fragment where an application can place handling options. Certain options (such as the illustrated list) may be considered to provide internal, potentially sensitive network information, and thus packets that contain these options preferably are not allowed into the internal network. At step
20 74, if a handling option of 7, 68, 131, or 137 is present, then the packet is junked; if these options are not present, then the process proceeds to filter IP packet step 76 (exemplary details of step 76 are explained in greater detail hereinafter). If the packet passes the filtering rules applied in filter IP packet step 76, then the packet is passed, as indicated by step 78. If the packet does not pass the filtering rules applied in filter IP packet step 76, then the packet is junked.

25 As illustrated in FIG. 4, any signals indicating that the packet should be junked are provided to result aggregator 24, as indicated by line 73. The filtering results are thus routed to result aggregator 24, which records whether any of the packets were junked and thus invalidated. Result aggregator 24 provides one or more signals to the logic of block 60 at a time early enough
30 so that a Frame Check Sequence (FCS) character may be altered to effectively invalidate the packet. Therefore, prior to complete forwarding of the packet, the filtering decision is made and the FCS character is either altered in order to ensure that it is corrupted, if the packet is to be

junked, or forwarded unchanged, if the packet is to be passed. In effect, a system in accordance with the present invention acts like a hub or repeater by receiving packet nibbles (2 or 4 bits at a time) on one interface wire and by broadcasting those nibbles on other interfaces. Thus, the data protection system cannot make a decision about a packet before forwarding the nibbles on the non-receiving interfaces since this may result in an inoperable Ethernet network. If the system is enabled to filter a packet, it must still transmit data while receiving data to ensure the Ethernet network functions correctly and efficiently. The data protection system filters packets by transmitting a nibble on the non-receiving interfaces for each collected nibble on the receiving interface, but ensures that the Ethernet packet FCS character is not correct if the packet is suspect. Thus, the sending station may perceive that it successfully transmitted the packet without collision, but in fact all receiving stations will discard the corrupted packet. It should be noted that, in alternative embodiments, in lieu of or in addition to the selective alteration of a FCS or checksum-type value, the data contents of the packet also may be selectively corrupted in order to invalidate packets. In such embodiments, the packet contents are selectively altered to corrupt the packet (e.g., ensure that the checksum is not correct for the forwarded packet data or that the data is otherwise corrupted) if the packet did not pass the filtering rules.

FIG. 4 also illustrates physical switch or toggle 62, the state of which can be used to enable or control packet filtering in accordance with the present invention. The state of switch/toggle 62 is coupled to the data protection system in a manner to enable or disable packet filtering. In the illustrated example, the state of switch/toggle 62 is coupled to the logic of block 60; if, for example, packet filtering is disabled, then block 60 can receive and forward packets while disregarding the output of result aggregator 24 (alternatively, result aggregator 24 can be controlled to always indicate that the packet should not be invalidated, etc.). In other embodiments, the state of such a switch/toggle can control result aggregator 24 or all or part of the particular filtering steps. As will be appreciated in accordance with the present invention, the data protection system may be controlled and configured without requiring the implementation of complex software. The data protection system preferably utilizes toggle buttons or other physical switches to selectively enable various functions, such as Internet client applications, Internet server applications, and filtering features. The system, for example, also may contain a button for retrieving updated core logic or filtering rules from a data source. The data source for such updating of the core logic may include a wide range of forms of digital media, including but not

limited to a network server, a floppy disk, hard drive, CD, ZIP disk, and DVD. Configuration, therefore, may be determined by physical interface components attached or linked to the system .

Referring to FIG. 5, additional details of preferred filter IP packet step 76 will now be described. FIG. 5 is a flow chart illustrating the packet filtering functions of the Level 3 filters first illustrated in FIG. 3. At step 81, the Level 3 filtering processes determine the IP datagram characteristics, which preferably include: datagram type (ICMP, IGMP, TCP, UDP, unknown); source and destination IP addresses; fragment offset; and fragment size. Based on the IP datagram characteristics, further filtering operations are performed. Preferred functions for Level 3 filtering will now be described in greater detail.

At step 80, if the IP datagram type is unknown, then the fail signal is set, sending a signal to the result aggregator that the packet should be invalidated. At step 82, if the IP datagram type is Internet Group Management Protocol (IGMP), then the fail signal is set, preventing IGMP packets from passing. At step 84, if the type is Internet Control Message Protocol (ICMP) and the packet is from the external PHY, then the filtering proceeds to step 88. At step 84, if the type is ICMP and the packet is not from the external PHY, then the packet is passed as indicated by step 86. At step 88, if the type is ICMP, and the packet is from the external PHY and does not contain a fragment offset of 0, then the fail signal is set, preventing fragmented ICMP packets from passing, as indicated by step 90; otherwise, the filtering proceeds to step 92. At step 92, if the type is ICMP, the packet is from the external PHY and contains a fragment offset of 0, then the packet type is further evaluated for request and exchange data. This data preferably includes one of the following ICMP message types: 5 for redirect; 8 for echo request; 10 for router solicitation; 13 for timestamp request; 15 for information request; or 17 for address mask request. Accordingly, if the packet type satisfies the criteria for step 92, then the fail signal is set as indicated by step 96. Otherwise, the packet is allowed to pass, as indicated by step 94. As will be appreciated, the ICMP filtering branch serves to keep potentially harmful ICMP packets from entering from the external network. (The listed message types represent an exemplary set of ICMP packets that may expose the internal network topology to threats or cause routing table changes.)

If IP datagram characteristics indicate that the packet is a Transmission Control Protocol (TCP) or User Datagram Protocol (UDP) packet, then the filtering proceeds to step 98. At step 98, it is determined whether the packet is a fragment 0 packet. If it is not, then the packet is

allowed to pass, as indicated by step 100. This filtering process follows the convention of filtering only the first fragments, as subsequent fragments will be discarded if the first one is not allowed to pass; in other words, the data protection system ignores all but the first packet of a TCP or UDP datagram. At step 104, if the packet is TCP or UDP and is a first fragment packet,
5 then it is determined whether a proper protocol header is included in the fragment; if it is not, then the fail signal is set as indicated by step 102 (in the illustrated embodiment all TCP and UDP packets that have improper headers are junked). If the packet is TCP or UDP, is a first fragment, and a proper protocol header is included in the packet, then the filtering proceeds to step 106 (further exemplary details of which will be described in connection with FIG. 6).

10 FIG. 6 is a flow chart that illustrates a preferred example of how TCP and UDP packets are evaluated in parallel in accordance with the present invention (see, e.g., the multiple rules engines and related discussion in connection with FIG. 2 and the Level 4 filters of FIG. 3). As is known, TCP and UDP are host-to-host protocols located in the Transport Layer of the protocol stack. FIG. 6 illustrates how packet data 108 is unbundled and decoded for packet characteristics
15 at step 110 (e.g., IP addresses, ports, flags, etc.) as well as for packet type and PHY activity at 112 (i.e., whether it is an internally generated packet or an externally generated one). In the preferred embodiments, the packets are evaluated in parallel according to the following rules.

As indicated at step 114, if the internal port number is 68 and the external port number is 67, then the packet is passed, regardless of whether it originated on the internal network or the
20 external network. As indicated at step 116, if the packet type is TCP, the server-mode is enabled (such as may be controlled by a toggle or other physical switch), the external PHY is active, and the internal port number is 80, then the packet is passed to the internal network(s). (The server mode is explained in greater detail in connection with FIG. 7 below). As indicated at step 118, if the packet type is TCP and either the Acknowledge (“ACK”) bit or Final (“FIN”) bit is set, then
25 the packet is passed, regardless of whether it originated on the internal network or the external network. As indicated at step 120, if the packet type is TCP and an internal PHY is active, then the packet is passed to the external network. As indicated at step 122, if the packet type is UDP, an internal PHY is active, and the external port number is 53, then the packet is passed to the external network and the communication state (e.g., source and destination port numbers) is
30 stored as indicated by comm or communication state store 124. As indicated at step 126, if the packet type is UDP, the external PHY is active and the external port number is 53, then the

packet is passed to the internal network(s) if there is a match in the communication state. As indicated at step 128, if the packet type is TCP, an internal PHY is active, the external port number is 21, the Synchronize Sequence Numbers (“SYN”) bit is not set but the ACK bit is set, and the packet is a PORT command, then the packet is passed to the external network and the client (internal network) active port is determined and the communication state is stored. As indicated at step 130, if the packet type is TCP, the external PHY is active, the external port number is 20, and the SYN bit is set but the ACK bit is not set, then the packet is passed to the internal network(s) if there is a communication state match. As indicated at step 132, if all checks have been completed, then a complete signal is set, and signals indicative of whether the packet passes to internal or external network(s) as previously described are bitwise logically ORed to generate pass internal and pass external signals, as illustrated.

In preferred embodiments, if the completion signal is not generated by the time that the packet has been completely received, then the packet is junked. It should be noted that the use of such a completion signal and packet junking can be extended to the diagrams and description, etc. of other figures, such as FIGS. 2, 3, 4, 5, 7 and 8. If the filtering process has not been completed by the time that the packet has been completely received, then the packet is preferably junked.

Referring now to FIG. 7, Level 4 filtering in accordance with the present invention will be further described. The embodiment of FIG. 7 is a table-based filter, which uses an approach similar to that described in connection with FIG. 2. This approach preferably utilizes a programmable logic device (PLD) that includes low latency, high-speed ROM and RAM blocks.

As previously described, Level 4 filtering is based on TCP and UDP packet characteristics, the determination of which is illustrated in FIG. 7 by block 133. TCP and UDP characteristics, as noted elsewhere herein, may include not only source and destination port numbers, but also the state of the SYN, ACK, FIN and/or RESET flags in the case of TCP packets. The TCP/UDP characteristics are determined by the TCP/UDP header information. The TCP/UDP characteristics and active PHY information are used in the generation of a lookup code, which in the embodiment of FIG. 7 is coupled to rules dispatcher 134. Rules dispatcher 134 uses a lookup code to determine the filtering rules to be applied to a packet and then places the identifiers of the rules to be run in queues 138-1 to 138-N for each of the rules engines 140-1 to 140-N. Mapping table 136 is coupled to and receives address data from rules dispatcher 134.

Mapping table 136 preferably is a ROM block that identifies the rules associated with each lookup code and the rules engine for which each rule is to be dispatched. The mapping data for the rules and rules engines are returned to rules dispatcher 134.

The identifiers of the rules to be run are dispatched by rules dispatcher 134 to the appropriate queues 138-1 to 138-N, which are preferably FIFO-type structures that hold the rule identifiers for corresponding rules engines 140-1 to 140-N. Queues 138-1 to 138-N not only enable rules dispatcher 134 to assign rules at maximum speed, but also allow each rules engine to retrieve rules as each one is evaluated. The rules engines 140-1 to 140-N are a plurality of filtering engines/logic that use a rule table to read a definition specifying whether a rule applies to a packet and whether the packet passes or fails the rule test. Rules tables 142-1 to 142-N preferably are ROM blocks that contain a definition of a set of filtering rules that are controllably run by the rules engines 140-1 to 140-N. Rules tables 142-1 to 142-N may contain different rules as may be appropriate to provide all of the rules necessary to adequately filter packets within the timing constraints imposed by the real time filtering of the present invention, and the speed of the hardware used to implement the data protection system.

In addition, as illustrated in FIG. 7, rules engines 140-1 to 140-N may receive as inputs signals indicative of a stored communication state, IP datagram characteristics, or physical switch/toggle states. As indicated by block 148, toggles may be utilized for a variety of features, such as enabling web client, web servers or other user-defined features. With at least some of the executed rules based on the stored communication state, stateful rules are implemented with the illustrated embodiment. A communication state table or cache is provided. A cache of communication state information between different hosts provides a set of bits that represent rule defined state information. For example, source and destination port information may be stored in the cache and used for state-dependent filtering.

In the illustrated embodiment, communication state information from rules engines 140-1 to 140-N may be provided to result aggregator 144, which in turn may store the communication state information to the communication state cache or storage area. Result signals, representing pass or fail of the packet based on the applied rules, also are provided to result aggregator 144. Result aggregator 144 combines the pass/fail results signals and provides a pass or junk signal or signals, which may be provided to the repeater core or to another result aggregator.

FIG. 8 illustrates an alternative preferred embodiment, in which the Level 4 filtering is implemented with a register-based filtering methodology. As with the Level 4 filtering of FIG. 7, both stateful filters 154 and non-stateful filters 153 may be implemented. As with the embodiment of FIG. 7, Level 4 filtering requires that TCP and UDP packet characteristics be determined, as illustrated by box 150. In addition to the Level 3 packet characteristics, Level 4 filters in accordance with this embodiment also require the source and destination port numbers and the TCP header values for the SYN, RST, FIN flags and the ACK value. This information preferably is used by both non-stateful and stateful filters 153 and 154. The implementation of the non-stateful filters is executed with a state machine or other logic preferably in the PLD that compares characteristics to the allowed non-stateful rules and makes a judgement as to whether the packet should be passed or failed. The non-stateful rules engine/logic uses a set of static rules to decide if a packet is allowed to pass through the firewall. These rules preferably are specified using a combination of control inputs, active PHY, and network packet characteristics.

Stateful filters are implemented to handle communication channel interactions that span multiple transmissions between hosts. The interactions typically occur at the Application Layer of the protocol stack, where examples may include FTP, RealAudio, and DHCP. These interactions may also take place at lower levels in the protocol stack, such as ARP and ICMP request/response.

In this embodiment, stateful filters 154 use protocol front-end and protocol back-end logic, along with a plurality of state registers to implement state-dependent filters. Each protocol that requires stateful packet filtering preferably has protocol handlers in the form of front-end and back-end logic, which decide when to issue a pass signal for a packet or store the identifying characteristics of a bitstream for later reference. Front-end logic 160-1 to 160-N monitors the network traffic to identify when the current communication state needs to be stored, deleted or updated. Front-end logic 160-1 to 160-N informs a corresponding back-end logic 158-1 to 158-N that a register will be allocated for storage for a bitstream. All store and delete state register requests are sent to back-end logic 158-1 to 158-N so it may update its internal information. Register controller 155 controls the actual selection of registers in state registers 156 and informs the corresponding back-end logic 158-1 to 158-N. Back-end logic 158-1 to 158-N monitors which state registers are dedicated to its protocol and issues a pass signal for packets that match an existing bitstream, as indicated by the appropriate packet characteristics and a matching state

register. It should be noted that in alternate embodiments, different organizations of the functions of the programmable logic may be implemented in accordance with the present invention, incorporating various types of protocol handlers and state registers, as may be necessary.

5 Register controller 155 consolidates multiple store and clear signals from the various front-end logic 160-1 to 160-N and directs them to the appropriate registers in state registers 156. Register controller 155 also informs the various back-end logic 158-1 to 158-N which registers of state registers 156 are to be used for storage. The registers of state registers 156, under control of register controller 155, store the communication state of a bitstream; for example, a particular
10 register records information about the two communication ends of the bitstream and also monitors each network packet to see if it matches the stored end-point characteristics. State registers 156 then sets a signal when its state matches the current packet characteristics. A “garbage collection” function also is implemented (as further illustrated in FIG. 13 below) to help free up state registers when the protocol information during the three-way handshake is not
15 accessed within specific time frames.

As is known in the art, many protocols provide a way of identifying the end of a communication session. Accordingly, in preferred embodiments the data protection system detects when a stateful stream ends and frees up the associated state registers. Since clients and servers do not always cleanly terminate a communication session, the system preferably
20 implements session time-outs to free state registers after a period of bitstream activity and to prevent indefinite state register exhaustion. If the network experiences a high rate of bitstreams requiring stateful inspections, the system’s resources, which are allocated to tracking application data, can become exhausted. In this case, the system preferably resorts to allowing network traffic based on a set of static rules to pass through the non-stateful rules designed specifically for
25 each protocol. This stateful to non-stateful transition is called “stateful relaxation.” To maintain maximum security, a protocol handler that cannot gain access to an open state register will free up all of its state registers to help prevent other protocol handlers from entering into a relaxation state. The system will then wait for a state register to open, start a timer, and record protocol communication data in the state registers, while relying on the static rules. When the timer
30 expires, the state filter will cease relying upon the static rules and approve packets solely on state register information.

FIG. 8 also illustrates toggle 152, which, in the additional illustrated example, selectively enables FTP (File Transfer Protocol) communications based on the switch state. Protocol back-end logic 158-1 to 158-N, as appropriate, utilize such toggle state information to selectively generate the pass/fail signals for the applicable protocols. For example, when the toggle switch is enabled, which is the default mode in most FTP client applications, it may send a signal to the internal FTP server to open a TCP connection to the client. Front-end logic 160-1 monitors the network traffic for data from the internal network, PORT command, source port number (greater than 1024) and destination port number (equal to 21). When this information is matched, front-end logic 160-1 requests state register controller 155 to store both the PORT command IP address and the port number as the destination end and the destination IP address, as well as store port 20 as the source end of a future communication packet. (In other embodiments, additional checks may be conducted to ensure the active connection IP address is the same as the current source IP address.) When back-end logic 158-1 recognizes the storage request, it waits for the allocated state register in state registers 156 to be sent by register controller 155. For example, when the state register number is set as register #1, then it records that register #1 is dedicated to allowing active FTP connections through the data protection system. Back-end logic 158-1 then waits for register #1 to signify that the current packet matches its stored state. When back-end logic 158-1 recognizes that the three-way TCP handshake has been completed for the new connection, it will notify front-end logic 160-1 to delete the state register. If the state register is junked, then back-end logic 158-1 records that register #1 is no longer dedicated to active FTP connections, allowing register controller 155 to allocate that register to a different protocol or network connection in the future.

FIG. 9 illustrates a preferred physical implementation of one embodiment of the present invention. In this embodiment, one external network connection and one internal network connection are provided. It will be appreciated that the components of FIG. 9 can be altered to implement, for example, bastion network connections and multiple internal network connections, etc.

The Internet connection, for example, via a cable modem, DSL router or other network interface, preferably is coupled with a physical cable to connector 168, which may be an RJ-45 connector. The signals received via connector 168 are coupled to and from PHY 170, which provides the physical interface for the data signals received from, or coupled to, the external

network. Signals are coupled between PHY 170 and PLD 162, and signals are coupled between PLD 162 and PHY 172, which couples signals between connector 174 (which again may be an RJ-45 connector). The connection to the internal network may be made through connector 174.

In the preferred embodiment, PLD 162 implements the various levels of filtering as
5 previously described. PLD 162 provides logic/hardware based, parallel filtering rules
logic/engines, which make a decision about whether the packet should be allowed to pass or fail
prior to the time that the packet is passed on by the repeater core portion of PLD 162 (as
described elsewhere herein). The logic of PLD 162 to implement the filtering rules is
programmed/loaded by controller 164, which may be a RISC CPU such as a MIPS, ARM,
10 SuperH-type RISC microprocessor or the like. The PLD code preferably is stored in memory
166, which preferably is a re-programmable, non-volatile memory, such as FLASH or EEPROM.
In this manner, the PLD code may be updated by reprogramming memory 166, and the updated
PLD code may then be programmed/loaded in to PLD 162 under control of processor 164.

FIG. 9 also illustrates the use of LEDs 177, 178 and 179 to provide visual feedback of the
15 data protection system status. In accordance with the present invention, the use of such displays
or light sources may be used to convey various types of information to the user. For example,
LEDs 177 and 179 may be provided to indicate that PHYs 170 and 172 are detecting an active
network connection (and thus provide an indication that the network connections are present and
functioning properly). LED 178 preferably provides alarm type information. For example, LED
20 178 may be provided in the form of a multi-color LED, which may provide a first colored light
(e.g., yellow) if the data protection system has rejected one or more packets (thereby indicating
that the system may be detecting an attack), and which may provide a second colored light (e.g.,
red) if the data protection system is continually rejecting packets or rejecting packets at a high
rate (thereby indicating that the system is likely under attack). Such visual indicators, which may
25 be coupled with audio feedback as described elsewhere herein, serve to inform the user that the
user's computer or network may be under attack, thereby enabling the user to take further action,
such as disconnecting from the network.

It should be noted that such visual feedback may be implemented in a variety of forms. In
addition to multi-color or multiple LEDs or other lights sources or displays, a single LED could
30 be provided, with the LED blinking at a rate that indicates the level of severity as predicted by
the data protection system. For example, if no packets have been rejected, then the LED may be

in an off or safe (e.g., green) state. If packets have been rejected but not on a continual or high rate basis, then the LED (e.g., red) may be controlled to blink on and off at a first, preferably lower speed rate. If packets are being rejected on a continual or high rate basis (or otherwise in a manner that that system believes is suspect), then the LED may be controlled to blink on and off at a second, preferably higher speed rate. Thus, the LED blink rate desirably may be controlled to blink at a rate that corresponds to the level of severity of the security threat that is determined by the data protection system. Optionally coupled with audio feedback, such visual indicators may provide the user with alarm and status information in a simple and intuitive manner.

As further illustrated in the preferred embodiments of FIG. 9, a variety of physical switches or toggles 176, 180, 181 and 182 may be coupled to PLD 162 or controller 164. As illustrated by update button 176, toggles may be used to control the updating of the PLD code (for instance, to reconfigure or update the system, providing updated filtering algorithms). As illustrated by buttons 180 and 181, toggles may be used to selectively activate/deactivate filtering steps depending on whether a protected computer is enabled to operate in either a server mode or client mode (the state of such toggles preferably being used to control filtering decisions made within the filtering logic). As illustrated by reset button 182, toggles may also be used to control the reset of the data protection system (for example, to cause the PLD code to be re-loaded, as when the system enters an inoperable state caused by power supply irregularities or other unusual circumstances). The use of such physical switches/toggles allows the data protection system to be controlled in a straightforward manner, simplifying the user operability of embodiments of the present invention.

With reference to FIG. 9, additional details of preferred update program and protocols will now be described. The data protection system may be controlled to operate in an update mode by pressing update button or toggle 176, which preferably is provided on an external case (further described in FIG. 10 below). In accordance with preferred embodiments, during the interval when the update button is pressed by the user and the update either completes or is canceled by the user, the data protection system will not forward any packets (i.e., filtering is not active, so packet transmission is blocked). The user may then run an update program (which may be a browser-based or stand-alone application) from an internal host computer.

In the illustrated embodiment, it is assumed that the user previously downloaded a system update or is downloading an update through a browser. The update program preferably breaks the

update into 1K size packets and forwards them, using a limited broadcast destination address (for example, 255.255.255.255). The source and destination ports are set to a predetermined value, such as 1 (1-4 are currently unassigned according to RFC 1010), and an IP option is set in the IP header. The program data preferably is preceded by the system update header that has the following structure in the illustrated embodiment: ID (1)/count (1)/bit length (2). The numbers in parentheses represent the field size in bytes. The ID for the entire transaction remains unchanged, except for the count field increments for each packet. In a preferred embodiment, the data protection system may receive the packets in order and perform several checks, such as ensuring the ID and count fields are correct, verifying the UDP checksum, and storing the configuration data in non-volatile memory. Preferably, these checks may be controlled by controller 164. Thereafter, the updated PLD code may be loaded into the PLD, with the filtering operations being based on this updated code.

As a result of the parallel filter rules evaluation as previously described, packets do not need to be buffered, except, for example, to create octets that facilitate determining protocol elements. (As is known, data needs to be combined into 8-bit, 16-bit, or 32-bit words because header and packet data often exist in these sizes or straddle a 4-bit nibble boundary.) Instead of buffering each packet, the data protection system generates another distinct data packet or chunk. This process of packet generation occurs while a plurality of filtering rules are applied in real time and in parallel, producing improved data protection systems and methods.

FIG. 10 illustrates a preferred embodiment of an exemplary design of an external case of a data protection system in accordance with the present invention (it being noted that the particular switches, lights, etc., and their physical arrangements being exemplary). For example, external case 184 may be a molded plastic box in the shape of a "U" or folded tube as illustrated. The exemplary features of this external case may include ports, buttons (or toggle switches), LEDs, a clock, a removable logo disk, and a power supply connector. Home (internal) port 186, Internet (external) port 188, and power supply connector 190 are preferably located on the same side of external case 184 with power supply connector 190 set between the two ports. Home port 186 connects to the internal network via cable 192; Internet port 188 connects to the external network via cable 194. Power supply connector 190 is coupled to an external DC power supply via cable 193. The PHY of each port preferably is coupled to a link LED, such as previously described: home port 186 is coupled to internal link LED 196; and Internet port 188 is coupled to

external link LED 198. The link LEDs are thus coupled to the internal and external PHYs, respectively, and serve to indicate whether the PHYs have detected a network connection.

In the preferred embodiment, on the internal network side of the U-shaped case, server mode button 200 is provided to allow the user to selectively enable filtering depending on whether the internal computer is allowed to operate in a server mode (thus, the state of server mode button 200 may be used to selectively control filtering decisions based on whether internal computers will be operating in a server mode, etc.). Server mode button 200 preferably includes server mode LED 202. When illuminated (e.g., green), server mode LED 202 indicates that the internal computers are enabled to operate in a server mode and the filtering decisions will be controlled accordingly. Server mode button 200 and server mode LED 202 are coupled to PLD 162, as described in FIG. 9. In the illustrated embodiment, parallel to server mode button 200 on the external side of the case is alert button 204, which contains alert LED 206. Alert LED 206 is coupled to alarm controller 53, which preferably is implemented as a part of PLD 162 (as illustrated in FIGS. 3 and 9, respectively). Alert LED 206 may contain a single or multi-colored LED, which, when illuminated, indicates the data protection system is under attack and is rejecting suspect packets. The data protection system preferably registers the frequency of attacks and sends signals to alert LED 206 based on such information. In a preferred embodiment, alert LED 206 may contain a LED (e.g., red), which remains consistently illuminated during irregular attacks or blinks at regular intervals under heavy attack. In another preferred embodiment, alert LED 206 may contain a multi-colored LED, which similarly indicates when the system is under attack and is rejecting packets. However, with a multi-colored LED, the increase in frequency or intervals of attacks may be indicated by a change in color: for example, green (indicating no registered attacks by suspect packets) to yellow (indicating a few irregular attacks) to red (indicating more frequent attacks) to blinking red (indicating a heavy attack). The alert alarm may be reset by depressing alert button 204.

In a preferred embodiment, speaker 55 or some form of audio transducer may be coupled to alarm controller 53 to also indicate the presence or severity of attacks (as described in connection with FIG. 3). For example, when the data protection system is under heavy attack and alert LED 206 is blinking (e.g., red), an alarm signal may be transmitted to speaker 55 to emit audio information to indicate a suspected severe attack or emergency. Alarm-type information may also be coupled to the internal network (such as via a UDP packet, as described elsewhere

herein), and thus transmit alarm information over the network to a software interface on the desktop. In other embodiments of the data protection system, an array of different features, including buttons, LEDs, alarms, and graphical user interfaces, may be utilized to indicate the class, frequency and severity of attacks on the system.

5 Adjacent to alert button 204 on the external network side of the case preferably is protection button 208, which is coupled to protection-on LED 212 and protection-off LED 214. When protection button 208 is set in the “on” position, protection-on LED 212 preferably illuminates red and the filtering system is enabled; when protection button 208 is set in the “off” position, protection-off LED 214 preferably illuminates yellow and the filtering system is
10 disabled. As will be appreciated, the particular colors utilized are exemplary.

Still referring to FIG. 10, power LED 210 is coupled in a manner to indicate power is being provided via power supply connector 190. When power LED 210 is illuminated (e.g., green), it indicates the power supply is providing power to the data protection system. It should be noted that in the illustrated embodiment, the present invention does not require an on/off
15 switch for the power supply because the system is designed to be enabled once a DC power supply is provided. As previously described, reset button 182 is coupled to controller 164 and may be used to initiate loading or re-loading of the PLD code.

Adjacent to reset button 182 is update button 176, which is coupled to update-enabled LED 218 and update-disabled LED 220, as well as PLD 162 (as illustrated in FIG. 9). As
20 previously described, an update program preferably is utilized to update the logic programming and rules tables. Preferably, after pressing update button 176, the data protection system is automatically restarted, causing the new PLD code to load. The load version bit preferably will be set in the flash configuration header, which causes the system to load using the new program file. In a preferred embodiment, update-enabled LED 218 will illuminate in green to indicate the
25 data protection system is ready to receive the new updated programming. After the update begins, the system may continually flash update-enabled LED 218 until the successful completion of the update; LED 218 is extinguished upon successful completion of this process. However, if an update is incomplete and fails to occur, update-failed LED 220 may illuminate in red and blink. The user extinguishes LED 220 by pressing the update button a second time. If possible, the data
30 protection system may generate a UDP packet to inform the internal client of the reason for the failure. As an additional example, if the system contains an LCD, it may display an error code.

The data protection system will continue to filter packets after update-failure LED 220 is extinguished. LED 216 is preferably provided to be illuminated when the system is operating and filtering packets in the manner described. In addition to the various toggles in a preferred embodiment of the present invention, additional types of components may be used to enter
5 filtering criteria and/or selectively enable or control the filtering, such as a LCD display coupled with input buttons, a touch screen, an audio input for speech recognition, and/or a clock. Thus, filtering decisions may be made based on such switch inputs, audio commands, time of day or date, etc.

As further illustrated in FIG. 10, a removable logo disk 222 may be located on a preferred
10 embodiment of the case. This removable disk may include a company logo, registered trademark, and/or other copyrighted material that may be valuable for branding and marketing the data protection system under a separate wholesaler. The disk is thus removable and replaceable for a variety of branding purposes.

In an alternate embodiment, security levels switch 223 may be implemented to prevent
15 stateful relaxation, in which a stateful to non-stateful transition may occur during state register exhaustion. As illustrated in FIG. 8, security levels switch 223 may preferably include a variety of features that prevent stateful relaxation, such as timers, protocol-specific filters, and other rules-based filters. For example, switch 223 may be configured for three positions: one which allows FTP protocols, but does not allow DNS protocols; another which allows DNS protocols,
20 but does not allow FTP; and a third which may serve as an emergency back-up feature and block all network traffic.

In other embodiments, different designs may be used in accordance with the present invention, incorporating various buttons, switches, LEDs, ports, cables, slots, connectors, plug-
25 ins, speakers, and other audio transducers, which in turn may be embodied in a variety of external case shapes, as may be necessary. As will be appreciated, the filtering criteria may be dependent upon physical switch position, packet characteristics, clock time, and/or user-specified criteria, all of which may be entered through one or more physical input device(s). Such a physical input device, for example, may be comprised of one or more switches (such as a toggle switch, button switch, or multi-state switch), an audio input device, or display input device. The
30 user-specified criteria may be transferred from the configuration software to the system using a network protocol, infrared port, or cable attachment.

FIGS. 11 and 12 are flow diagrams illustrating examples of “SYN flood” protection in accordance with preferred embodiments of the present invention. Such SYN flood protection is optionally provided as an additional computer protection mechanism in accordance with certain preferred embodiments.

5 As is known in the art, SYN flood is a common type of “Denial of Service” attack, in which a target host is flooded with TCP connection requests. In the process of exchanging data in a three-way handshake, source addresses and source TCP ports of various connection request packets are random or missing. In a three-way handshake, the system registers a request from an IP address, then sends a response to that address based on its source, and waits for the reply from
10 that address.

As illustrated in FIG. 11, the data protection system waits for a packet from external PHY 14 (as illustrated in FIG. 2) at step 224. When the system receives a packet from the external PHY, it compares the IP address and ports to the flood list entries at step 226, then proceeds to step 228. At step 228, the system determines whether the packet type is TCP, the ACK bit is set,
15 and the packet matches an entry in the flood list. If these criteria are met, then the system proceeds to step 230, where the packet is removed from the flood list. If the packet is removed from the flood list, then the system returns to step 224 and waits for the next packet from the external PHY. Otherwise, if the criteria at step 228 are not met, then the system proceeds to step 232, where the system determines whether the packet type is TCP, the SYN bit is set and the
20 ACK bit is not set. If the criteria at step 232 are met, then the system proceeds to step 234; otherwise, the system returns to step 224. At step 234, the system determines if the flood list is full and if the client has reached the maximum connection requests. If the flood list is not full, then the system returns to step 224 to wait for more packets from the external PHY. However, if the flood list is full at step 234, then the system proceeds to step 236, where the packet is junked
25 and the system returns to step 224.

As illustrated in FIG. 12, the data protection system also waits for a packet from internal PHY 18 (as illustrated in FIG. 2) at step 238. When the system receives a packet from the internal PHY, it accesses the flood list location and writes the bits into the list, swapping ACK bits as well as MAC, IP and port addresses. The system then proceeds to step 242, where it
30 determines if the packet type is TCP and the SYN and ACK bits are set. If the criteria at step 242 are met, then the system proceeds to step 244; if not, then the system returns to step 238 and

waits for another packet from the internal PHY. At step 244, the SYN flag is unset and number 1 is added to the new ACK number. The system then proceeds to step 246, where it determines if the flood list is full. If the flood list at step 246 is full, then the Reset flag is set, the checksums for TCP, IP and Ethernet protocols are recalculated, and the Reset packet is transmitted. The system then returns to step 238. However, if the flood list at step 246 is not full, then the system proceeds to step 248, where the checksums for TCP, IP and Ethernet protocols are recalculated and the ACK packet is transmitted. The system then proceeds to step 252, where the recalculated packet is added to the flood list and the system returns to step 238, where it waits for another packet from the internal network.

In accordance with the present invention, SYN flood protection as described does not require either an IP or MAC address. The data protection system uses the destination MAC address as the source Ethernet address when framing the response packet that completes the TCP three-way handshake. In all cases, when forming the new packet, the source and destination header information is swapped, so that the source IP address and port become the destination IP address and port. It should be appreciated that SYN flood protection, as preferably implemented by the system, does not buffer the incoming packet, but builds the TCP response packet in real-time. The new TCP packet is placed in a queue for transmission at the earliest time possible based on the rules dictated by the link level protocol. .

As illustrated in FIG. 13, in order to keep the flood lists from filling up with stale entries, the data protection system must free up state registers when the protocol information is not accessed within specific time frames, such as when a three-way handshake is initiated by a client, but the transaction is not closed. After the system receives a packet, it for one second at step 254, then proceeds to step 256, where the packet is checked against each flood list entry and passed to step 258. At step 258, the system checks for stale entries (or garbage collection) in the flood lists and proceeds to step 260, where it determines if time has expired. If time has expired at step 260, then the packet proceeds to step 262; if not, then the system returns to step 256 to check each flood entry list again. At step 262, the system unsets the ACK bit and sets the Reset flag, adds 1 to the sequence number, recalculating the checksums, and then recalculates the checksums for TCP, IP, and Ethernet protocols. The system proceeds to step 264, where the Reset packet is transmitted; it then proceeds to step 266 and removes the packet from the flood list. The system

then proceeds to step 256. It should be noted that if time expires for the request, then the system sends the Reset flag, terminating the connection.

Although the invention has been described in conjunction with specific preferred and other embodiments, it is evident that many substitutions, alternatives and variations will be
5 apparent to those skilled in the art in light of the foregoing description. Accordingly, the invention is intended to embrace all of the alternatives and variations that fall within the spirit and scope of the appended claims. For example, it should be understood that, in accordance with the various alternative embodiments described herein, various systems, and uses and methods based on such systems, may be obtained. The various refinements and alternative and additional
10 features also described may be combined to provide additional advantageous combinations and the like in accordance with the present invention. As will also be understood by those skilled in the art based on the foregoing description, various aspects of the preferred embodiments may be used in various subcombinations to achieve at least certain of the benefits and attributes described herein, and such subcombinations also are within the scope of the present invention.
15 All such refinements, enhancements and further uses of the present invention are within the scope of the present invention.

What is claimed is:

1. A method for communicating data between an external computing system and an internal computing system over a packet-based network, comprising the steps of:

5 receiving a communication packet from the external computing system over the network, the packet having at least a first portion and an end portion, and transmitting the packet to the internal computing system;

in parallel with the step of receiving and transmitting the packet, determining characteristics of the packet from the first portion;

10 in parallel with the step of receiving and transmitting the packet, performing a plurality of checks on the packet, wherein at least certain of the plurality of checks are performing in parallel with other of the plurality of checks;

in parallel with the step of receiving and transmitting the packet, determining if the packet should be a valid packet or an invalid packet based on the plurality of checks; and

15 after receiving the end portion of the packet, selectively altering the end portion of the packet based on whether the packet has been determined to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

2. The method of claim 1, wherein the packet is analyzed in real time to determine if
20 the packet should be valid or invalid while the packet is being concurrently transmitted to the internal computing system.

3. The method of claim 1, wherein the packet is analyzed to determine if the packet is valid without the packet having been completely received and buffered.

4. The method of claim 1, wherein the packet is determined to be an invalid packet if
25 it is determined that the packet contains a virus, is unauthorized or presents a risk of harm to the internal computing system.

5. The method of claim 1, wherein the plurality of checks are at least in part selectively performed based on a state of a physical switch.

6. The method of claim 5, wherein the physical switch comprises one or more user-
30 controlled switches, wherein the plurality of checks are selectively performed based on a user-defined state of the one or more user-controlled switches.

7. The method of claim 6, wherein the one or more user-controlled switches comprise at least one user-controlled switch that controls a configuration or reconfiguration of a circuit that performs the plurality of checks.

8. The method of claim 7, wherein the configuration or reconfiguration of the circuit that performs the plurality of checks is performed without requiring user entry of configuration commands via software running on the internal computing system.

9. The method of claim 7, wherein the circuit that performs the plurality of checks is configured or reconfigured based on commands from the internal computing system and based on a state of the at least one user-controlled switch.

10. The method of claim 5, wherein at least a subset of the plurality of checks are selectively enabled or disabled based on the user-defined state of the user-controlled switches.

11. The method of claim 1, wherein the plurality of checks are performed with a programmable logic device, wherein logic within the programmable logic device is selectively programmed to perform the plurality of checks in parallel with the receiving and transmitting of the packet.

12. The method of claim 11, wherein a first physical interface circuit receives the packet from the network, wherein the packet is coupled to the programmable logic device, wherein the packet is coupled from the programmable logic device to a second physical interface circuit for transmission to the internal computing system.

13. The method of claim 12, wherein the programmable logic device performs the plurality of checks while the packet is being coupled from the first physical interface to the second physical interface.

14. The method of claim 1, wherein the plurality of checks are selectively performed based on a communication state between the external computing system and the internal computing system.

15. The method of claim 14, wherein the communication state comprises one or more network addresses and/or one or more port numbers.

16. The method of claim 16, wherein the network address comprises an IP address for the external computing system and/or the internal computing system.

17. The method of claim 1, further comprising the step of providing visual or audio feedback with one or more visual or audio feedback devices, wherein the one or more visual or

audio feedback devices selectively provide visual or audio feedback of the operation or status of a packet filter process.

18. The method of claim 17, wherein the one or more visual or audio feedback devices provide visual or audio feedback that a system performing the packet filter process is
5 powered or operational.

19. The method of claim 18, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system performing the packet filter process is subjecting a packet to filtering criteria.

20. The method of claim 18, wherein the one or more visual or audio feedback
10 devices provide visual or audio feedback that the system performing the packet filter process has rejected one or more packets.

21. The method of claim 17, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the internal computing system is suspected to be under attack.

15 22. The method of claim 21, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

23. The method of claim 18, wherein the one or more visual or audio feedback devices provide visual or audio feedback of a state of the system performing the packet filter process until the one or more visual or audio feedback devices are reset by a user.

20 24. The method of claim 23, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

25 25. The method of claim 18, wherein the one or more visual or audio feedback devices comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system performing the packet filter process.

26. The method of claim 25, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system performing the packet filter process.

30 27. The method of claim 25, wherein the light source is controlled to selectively blink depending on the operation or status of the system performing the packet filter process.

28. The method of claim 27, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on the internal computing system.

29. The method of claim 25, wherein the at least one light source comprises an LED.

5 30. The method of claim 17, wherein the one or more visual or audio feedback devices comprise a speaker.

31. A system for filtering packets of data between at least an external network and an internal network, comprising:

a first interface circuit for coupling data to and from the external network;

10 a second interface circuit for coupling data to and from the internal network;

a programmable logic device coupled between the first interface circuit and the second interface circuit;

wherein, as a packet is being received and transmitted between the first and second interface circuits, the packet is simultaneously subjected to a plurality of filtering criteria by the programmable logic device, wherein an end portion of the packet is selectively altered by the programmable logic device based on the filtering criteria.

32. The system of claim 31, wherein the filtering criteria determine whether the packet is to be a valid packet or an invalid packet, wherein the packet is selectively altered to be invalid if it was determined that the packet should be an invalid packet.

20 33. The system of claim 31, wherein the programmable logic circuit includes at least first logic for determining characteristics of the packet being received and transmitted between the first and second interface circuits and at least a filter portion that subjects the packet to the plurality of filtering criteria while the packet is being received and transmitted between the first and second interface circuits.

25 34. The system of claim 33, wherein the filter portion includes at least a stateful filter portion and a non-stateful filter portion.

35. The system of claim 34, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion and the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

36. The system of claim 34, wherein the stateful filter portion subjects the packet to one or more stateful filtering criterion while the non-stateful filter portion subjects the packet to one or more non-stateful filtering criterion.

37. The system of claim 34, wherein a result aggregator logic receives one or more signals from the stateful filter portion and the non-stateful filter portion, wherein based on the received signals the result aggregator logic controls whether the packet is selectively altered to be invalid.

38. The system of claim 37, wherein the result aggregator logic receives a completion signal that indicates whether the stateful and/or non-stateful filter portions have subjected the packet to all of the filtering criteria.

39. The system of claim 38, wherein, if the completion signal is not received by the result aggregator logic by a time when the end portion of the packet has been received, then the packet is selectively altered by the programmable logic device to be invalid.

40. The system of claim 31, wherein the packet is subjected to the plurality of filtering criteria in parallel with the packet being received and transmitted between the first and second interface circuits, wherein a decision is made whether to selectively alter the packet to be invalid by a time when the end portion of the packet has been received.

41. The system of claim 31, wherein the packet is subjected to the plurality of filtering criteria in real time with the packet being received and transmitted between the first and second interface circuits.

42. The system of claim 31, further comprising one or more physical switches, wherein the packet is selectively subjected to the filtering criteria based on the state of the one or more physical switches.

43. The system of claim 42, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria.

44. The system of claim 42, wherein the state of the one or more physical switches selectively enable or disable a predetermined portion of the filtering criteria based on whether a computer coupled to the internal network is controlled to operate in a client mode or a sever mode.

45. The system of claim 42, wherein the state of the one or more physical switches selectively controls a configuration or reconfiguration operation of the programmable logic device.

46. The system of claim 42, wherein the state of the one or more physical switches
5 selectively controls a reset operation of the programmable logic device.

47. The system of claim 31, further comprising one or more visual or audio feedback devices, wherein the one or more visual or audio feedback devices selectively provide visual or audio feedback of the operation or status of the system.

48. The system of claim 47, wherein the one or more visual or audio feedback devices
10 provide visual or audio feedback that the system is powered or operational.

49. The system of claim 47, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system is subjecting a packet to the filtering criteria.

50. The system of claim 47, wherein the one or more visual or audio feedback devices provide visual or audio feedback that the system has rejected one or more packets.

51. The system of claim 47, wherein the one or more visual or audio feedback devices
15 provide visual or audio feedback that a computer coupled to the internal network is suspected to be under attack.

52. The system of claim 51, wherein the one or more visual or audio feedback devices provide visual or audio feedback of an estimated severity of the attack.

53. The system of claim 47, wherein the one or more visual or audio feedback devices
20 provide visual or audio feedback of a state of the system until the one or more visual or audio feedback devices are reset by a user.

54. The system of claim 53, wherein the one or more visual or audio feedback devices are reset by the state of a physical switch.

55. The system of claim 47, wherein the one or more visual or audio feedback devices
25 comprise at least one light source, wherein the light source is selectively controlled to provide information indicative of the operation or status of the system.

56. The system of claim 55, wherein the light source is controlled to have a first color or a second color depending on the operation or status of the system.

57. The system of claim 55, wherein the light source is controlled to selectively blink
30 depending on the operation or status of the system.

58. The system of claim 57, wherein the light source is controlled to selectively blink at a rate that is indicative of a severity level of a suspected attack on a computer coupled to the internal network.

59. The system of claim 55, wherein the at least one light source comprises an LED.

5 60. The system of claim 47, wherein the one or more visual or audio feedback devices comprise a speaker.

61. The system of claim 36, wherein the stateful filtering criteria are dependent upon physical switch position, packet characteristics, clock time and/or user-specified criteria.

10 62. The system of claim 61, wherein the user-specified criteria are entered via a physical input device.

63. The system of claim 62, wherein the physical input device comprises one or more switches, an audio input device, or display input device.

64. The system of claim 61, wherein the user specified criteria are entered via a configuration software.

15 65. The system of claim 64, wherein the user specified criteria are transferred from the configuration software to the system using a network protocol, infrared port or cable attachment.

66. The system of claim 63, wherein the one or more switches comprise a toggle switch, button switch or multi-state switch.

20

Abstract

Methods and systems for firewall/data protection that filters data packets in real time and without packet buffering are disclosed. A data packet filtering hub, which may be implemented
5 as part of a switch or router, receives a packet on one link, reshapes the electrical signal, and transmits it to one or more other links. During this process, a number of filters checks are performed in parallel, resulting in a decision about whether each packet should or should not be invalidated by the time that the last bit is transmitted. To execute this task, the filtering hub performs rules-based filtering on several levels simultaneously, preferably with a programmable
10 logic or other hardware device. Various methods for packet filtering in real time and without buffering with programmable logic are disclosed. The system may include constituent elements of a stateful packet filtering hub, such as microprocessors, controllers, and integrated circuits. The system may be reset, enabled, disabled, configured, and/or reconfigured with toggles or other physical switches. Audio and visual feedback may be provided regarding the operation and status
15 of the system.
