## Abstract

※ Application Number:

※ Application Date:

※ IPC Classification:

Title of the Invention: Thin wide-angle four-piece imaging lens assembly

[Chinese]

A thin wide-angle four-piece imaging lens assembly comprises a lens set and a fixed diaphragm, wherein the lens set comprises, sequentially from an object side to an image side along an optical axis, a first lens, a second lens, a third lens, and a fourth lens with the refractive power being positive, positive, negative, and positive, the surface of the first lens facing the object side and adjacent to the central optical axis is a convex surface, the surface of the second lens facing the image side and adjacent to the central optical axis is a convex surface, the surface of the third lens facing the object side and adjacent to the central optical axis is a concave surface and the surface thereof facing the image side and adjacent to the central optical axis is a convex surface, and the surface of the fourth lens facing the image side and adjacent to the central optical axis is a concave surface, and the fourth lens has at least one inflection point located between the optical axis and the aspherical end point; the fixed diaphragm is located between the object side and the second lens and satisfies  $15 < \text{HFOV}/f < 50$ , wherein HFOV represents one half of a maximum angle of view of the lens assembly, and f represents a focal length of the lens assembly; and a higher HFOV value and a lower f value can make the volume of the entire lens assembly denser and improve the resolving power. Therefore, the present invention has advantages of both compact and thin design and high performance.

[Title of the Invention] Thin wide-angle four-piece imaging lens assembly

[Field of the Invention]

[0001] The present invention relates to an imaging lens assembly, and in particular to a thin wide-angle four-piece imaging lens assembly.

[Description of the Prior Art]

[0002] A conventional imaging lens assembly is an imaging lens assembly adopted in an electronic product, such as a mobile phone, a smart phone, a tablet computer, a notebook computer, a camera, and the like. With the continuous improvement of electronic products, a gradual trend appears toward compact and thin design while achieving high performance. As a result, imaging lens assemblies are developed to have thin dimensions and become more compact as a whole. On the other hand, to improve the resolving power, imaging lens assemblies need to be developed to have a wider angle.

[0003] While conventional imaging lens assemblies, such as those according to the patents TW201215941A, TW201224568A, and TW201239443A, are disclosed to be four-piece imaging lens assemblies, none of the embodiments in the patents further meet the requirements for a thin and wide-angle design.

[0004] Therefore, in order to enable an electronic device to achieve advantages of both compact and thin design and high performance, a wide-angle imaging lens assembly having thin dimensions that make the overall assembly more compact and capable of improving the resolving power is currently desired on the market.

[Summary of the Invention]

[0005] Therefore, the objective of the present invention is to provide a thin wide-angle four-piece imaging lens assembly having thin dimensions that make the overall assembly more compact and capable of improving the resolving power.

[0006] Accordingly, the thin wide-angle four-piece imaging lens assembly of the present invention comprises a lens set and a fixed diaphragm. The lens set includes a first lens, a second lens, a third lens, and a fourth lens arranged in sequence from an object side to an image side along an optical axis. The first lens has a positive refractive power adjacent to the central optical axis and has a convex surface that faces the object side, and the first lens has at least one surface that is an aspherical surface. The second lens has a positive refractive power adjacent to the central optical axis and has a convex surface that faces the image side, and the second lens has at least one surface that is an aspherical surface. The third lens has a negative refractive power adjacent to the central optical axis and has a concave surface that faces the object side and a convex surface that faces the image side, and the third lens has at least one surface that is an aspherical surface. The fourth lens has a positive refractive power adjacent to the central optical axis and has a concave surface that faces the image side, both surfaces of the fourth lens are aspherical surfaces, and at least one of the two surfaces has at least one inflection point located between the optical axis and the aspherical end point. The fixed diaphragm is located between the object side and the second lens. Here, the thin wide-angle four-piece imaging lens assembly satisfies the following condition:

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
