A peer-to-peer (P2P) network for providing real time media recommendations is provided. The media recommendations may be song recommendations or video recommendations. Each time a media presentation is played by a peer device, the peer device provides a recommendation identifying the media presentation to other peer devices in the P2P network. A peer device having received recommendations from the other peer devices in the P2P network then programmatically, or automatically, selects a next media presentation to play from the media presentations recently played by the other peer devices and one or more locally stored media presentations. If the selected media presentation is not stored locally by the peer device, the peer device may obtain the selected media presentation from a subscription based service enabling streaming or download of the selected media presentation, an e-commerce service enabling purchase and download of the selected media presentation, or another peer device.
