**Subject:** Re: Action item

Dear Christine

this action item came out of our discussion on silicone levels to be evaluated. Based on [REDACTED] we have requested to test silicone levels below the [REDACTED], while you argued that this level is already the minimum [REDACTED]

This rational is still required, therefore we should not close the action item. We agreed that the rational will be completed by the results of the siliconization studies which hopefully show that the selected silicone level is also the lowest feasible for a robust process in consideration of the [REDACTED] for Lucentis.

Best regards

Jürgen

	Subject	Action item

Hi Juergen,  
I'm not sure, what you did expect regarding the following action item.

  Siliconization Study First overview of rational regarding established levels of silicone at Vetter [REDACTED] 15-May-2009 Open

Is the explanation given in the development plan sufficient and can we close this action item?  
More details regarding our siliconisation process could follow till end of May.

Kind regards,

Vetter Pharma-Fertigung GmbH & Co. KG
