(57) **ABSTRACT**

A network access device and method to run a gaming application on a network access device are described. The network access device comprises a communications module configured to allow the network access device to communicate with a network. The network access device is configured to transmit user identification information to a verification system and transmit security information to a verification system. When the user identification information and security information have been verified by the verification system, the network access device receives a random game output generated by a gaming system.
