CD Pack Description
For every product license sold in the Oracle Store, there is a corresponding CD Pack which contains the media for the particular product. In other words, we have unbundled the license from media and documentation, and they are now sold separately. By combining the Database CD Pack and Tools Media Pack, you would have all products sold in the Oracle Store under the tabs, "Database" and "Tools." During the checkout process, the contents of a CD Pack will be displayed. Please review this information carefully, as some products are not available on all operating systems.

With the introduction of CD Packs, you can now order additional copies of media at $39.95 per set.

CD Pack Contents
Your CD Pack contains: 1) a "How To Get Started" guide, 2) a red "Quick Suite Install" CD-ROM, and 3) product CD-ROMs with soft copy documentation. By combining the Database CD Pack and Tools Media Pack, you would have all products sold in the Oracle Store under the tabs, "Database" and "Tools." During the checkout process, the contents of a CD Pack will be displayed. Please review this information carefully, as some products are not available on all operating systems.

You may not have purchased a license to use all the products in the pack. However, you are welcome to install and evaluate, on a trial basis, any of the products in the CD Pack for 30 days at no charge. You will need to purchase licenses if you wish to continue using these products after the evaluation period. If you are adding users to an existing license and do not need media, you are not required to order additional CD Packs.

CD Packs Quantity
Generally, you will order one (1) CD Pack for each software license that will reside on each different computer. If you have purchased a license for several computers on different operating systems, you will probably want to order a CD Pack corresponding to each operating system. It is not necessary to order multiple CD Packs if you order multiple products that are contained on the same CD Pack. For information on what is contained in the CD Pack, please refer to the question and answer above.

Trial licenses do not include a CD Pack. You will need to purchase one separately if you need the CD-ROM. Some products are also available for download at http://oracle.com/download.
