

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

STMICROELECTRONICS, INC.,
Petitioner,

v.

NEODRON LTD.,
Patent Owner.

IPR2021-01160
Patent 8,749,251 B2

Before MIRIAM L. QUINN, PATRICK M. BOUCHER, and
SCOTT B. HOWARD, *Administrative Patent Judges*.

HOWARD, *Administrative Patent Judge*.

DECISION
Granting Institution of *Inter Partes* Review
35 U.S.C. § 314

INTRODUCTION

A. *Background and Summary*

STMicroelectronics, Inc. (“Petitioner”) filed a Petition to institute an *inter partes* review of claims 1–20 of U.S. Patent No. 8,749,251 B2 (Ex. 1001, “the ’251 patent”). Paper 1 (“Petition,” “Pet.”). Neodron Ltd. (“Patent Owner”) did not file a Patent Owner Preliminary Response.

We have authority, acting on the designation of the Director, to determine whether to institute an *inter partes* review under 35 U.S.C. § 314 and 37 C.F.R. § 42.4(a). *Inter partes* review may not be instituted unless “the information presented in the petition filed under section 311 and any response filed under section 313 shows that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition.” 35 U.S.C. § 314(a) (2018). “When instituting *inter partes* review, the Board will authorize the review to proceed on all of the challenged claims and on all grounds of unpatentability asserted for each claim.” PTAB Rules of Practice for Instituting on All Challenged Patent Claims and All Grounds and Eliminating the Presumption at Institution Favoring Petitioner as to Testimonial Evidence, 85 Fed. Reg. 79,120, 79,129 (Dec. 9, 2020) (codified at 37 C.F.R. § 42.108(a) (2021)).

For the reasons set forth below, upon considering the Petition and the evidence of record, we determine that the information presented in the Petition establishes a reasonable likelihood that Petitioner will prevail with respect to at least one of the challenged claims. Accordingly, we institute *inter partes* review on all of the challenged claims based on all of the grounds identified in the Petition.

B. Real Parties in Interest

Petitioner identifies itself as the real party in interest. Pet. 68. Petitioner also states that “[a]lthough STMicroelectronics N.V., STMicroelectronics, Inc.’s parent company, and STMicroelectronics (North America) Holdings, Inc., which is under common ownership with STMicroelectronics, Inc., are not real parties-in-interest under the governing legal standard for making that determination, STMicroelectronics, Inc. identifies them as real parties-in-interest for purposes of this Petition.” *Id.*

Patent Owner identifies itself as the real party in interest. Paper 4, 1 (Patent Owner’s Mandatory Notices).

C. Related Matters

Petitioner and Patent Owner each identify *Neodron Ltd. v. STMicroelectronics, Inc.*, No. 6-20-cv-00560 (W.D. Tex.) and *Certain Capacitive Touch Sensing Systems, Capacitive Touch Sensing Controllers, Microcontrollers with Capacitive Touch Sensing Functionality, and Components Thereof*, No. 337-TA-1268 as proceedings involving the ’251 patent. Pet. 68; Paper 4, 2.

Petitioner also identifies a number of terminated *inter partes* review proceedings and other district court and ITC proceedings involving the ’251 patent. Pet. 68–69.

Petitioner also identifies *STMicroelectronics, Inc. v. Neodron Ltd.*, IPR2021-01161. Paper 3, 1. In a decision issued concurrently with this one, we institute *inter partes* review in that proceeding. *STMicroelectronics, Inc. v. Neodron Ltd.*, IPR2021-01161, Paper 7 (Institution Decision).

D. The ’251 Patent

The ’251 patent, which is entitled “Proximity Sensor,” issued from Application 13/116,764 (“the ’764 application”), which was filed on May

26, 2011. Ex. 1001, codes (21), (22), (54). The '764 patent is a continuation of application 12/179,769 and claims the benefit of the filing date of provisional application 60/952,053. *Id.* at 1:5–9, codes (60), (63).

The '251 patent states that “[c]apacitive position sensors have recently become increasingly common and accepted in human interfaces and for machine control.” Ex. 1001, 17–19. According to the '251 patent, “in the fields of portable media players it is now quite common to find capacitive touch controls operable through glass or plastic panels. Some mobile telephones are also starting to implement these kinds of interfaces.” *Id.* at 1:19–24.

The '251 patent further describes how capacitive touch sensors may be used:

Many capacitive touch controls incorporated into consumer electronic devices for appliances provide audio or visual feedback to a user indicating whether a finger or other pointing object is present or approaches such touch controls. A capacitive sensing microprocessor may typically be comprised in touch-controlled devices which are arranged to provide an “on” output signal when a finger is adjacent to a sensor and an “off” output signal when a finger is not adjacent to a sensor. The signals are sent to a device controller to implement a required function dependent on whether a user’s finger is in proximity with or touching an associated touch control.

Id. at 1:25–36. According to the '251 patent, a problem with those devices is that some “remain ‘on’ or ‘active’ despite the user having moved away from the device or a particular function no longer being required. This results in the device consuming a large amount of power, which is not efficient.” *Id.* at 1:37–41.

The '251 patent addresses that problem by using a control circuit to “determine whether an object or a user’s finger is no longer in proximity

with the sensor.” Ex. 1001, 4:47–54. “[B]ased on a predetermined time duration, the control circuit can produce an output signal automatically to prevent the capacitance measurement circuit from continually measuring changes in capacitance due to, for example, the perceived presence of an object in proximity with the sensor.” *Id.* According to the ’251 patent, this allows the control circuit “to deactivate, turn-off, or power down the capacitance measurement circuit where an apparatus has inadvertently been left on or with the erroneous perception that a user is still present. This may, for example, be referred to as an ‘auto-off’ feature.” *Id.* at 4:55–59; *see also id.* at 10:41–13:57 (providing details of the auto-off feature).

Figure 1 of the ’251 patent is reproduced below.

Figure 1 “schematically shows sense electrode connections for an example chip for implementing an auto-off function.” Ex. 1001, 3:13–15.

E. Illustrative Claims

Of the challenged claims, claims 1, 10, and 16 are independent.

Claim 1 is illustrative and reads as follows:

1. An apparatus comprising:
a sensing element of a touch screen; and

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
