- You send your requests to the Super Proxy, and the Super Proxy relays them through a Proxy Peer on our network.
- You can specify to the Super Proxy which country/state/city the Proxy Peer should be in, when to force a switch to a different IP address within the country, where DNS is resolved and other parameters.
- The control is done by `-country-CODE` suffixes after username.
Example for Brazil:

```
lum-customer-{YOUR_CUSTOMER_ID}-zone-{YOUR_ZONE}-country-br
```

- Country/City/ASN names added to your username string has to be connected , without dashes or spaces.
Example for city targeting (New York City):

```
lum-customer-{YOUR_CUSTOMER_ID}-zone-{YOUR_ZONE}-country-us-city-newyork
```

Example for state targeting (New York State):

```
lum-customer-{YOUR_CUSTOMER_ID}-zone-{YOUR_ZONE}-country-us-state-ny
```
