(57) **ABSTRACT**

A system and a method transfer media content from a mobile device to a home network. A media application on the mobile device may be enabled to share media content with rendering devices in the home network. A user may enable and disable transfer of the media content from the media application to a target rendering device. Further, the media application may indicate visually the target rendering device and whether the media content is currently being transferred. Still further, the user may select a new target rendering device. Moreover, the media application may indicate network errors or other problems which may prevent the rendering of the media content and may enable the user to correct the network errors or the other problems.
