# IPTC-NAA INFORMATION INTERCHANGE MODEL PART I

## Chapter 1. GENERAL

### Section 1.1 INTRODUCTION

**Section 1.2** World-wide standardisation has become an acknowledged requirement in the graphics and information industry. In telecommunications, standardisation is centred upon the widely accepted seven-layer "Open Systems Interconnection" (OSI) model. While the lower five or six layers of this model are filled by other bodies, such as telecommunications companies or administrations, the CCITT, the ISO and manufacturers, it remains the responsibility of the users of information to define the model for the dissemination of data.

**Section 1.3** The Newspaper Association of America (NAA) and the International Press Telecommunications Council (IPTC) have worked jointly to design a globally applicable model for all kinds of data. Every effort has been made for this model to be as compatible as possible with ISO and CCITT standards in the fields of application. The joint effort will continue for further development and for amendment when advisable.

**Section 1.4** This model is designed to provide for universal communications embracing all types of data, including text, photos, graphics, etc. on a single network or a single storage medium. A mechanism is provided to use existing formats during transition.

**Section 1.5** The model assumes that the sender wishes to transfer a data object, such as a photographic image, text or perhaps a combination of many types. An envelope is provided around the object for information as to the type of data and the file format. Additional information, such as caption, news category or dateline also is included. The object itself is transferred, together with information regarding the size of the data.

**Section 1.6** Thus ANY form of computerised data may be transferred, together with pertinent editorial and technical information.

**Section 1.7** Older practice consisted primarily of rigidly formatted "headers" with a number of required fields denoting such things as story priority or category. The model here presented has relatively few required pieces of information. Instead, the informa-

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
