

Redness & Itchy Eye Relief™

Redness relief eye drops you can use as often as needed

Formulated with natural active ingredients that stimulate the body's natural defenses.

We all want our eyes to be white and clear, but many are concerned about the chemicals found in redness relieving eye drops. Most over-the-counter redness relieving eye drops use chemicals such as vasoconstrictors to mask symptoms. Vasoconstrictors may actually worsen the symptoms if used more than directed (usually 4 times a day maximum). Similasan works differently, by using natural botanical extracts to stimulate the body's natural defenses and target the root cause. Similasan products are made without harsh chemicals, so you can use them as often as needed.

- No Harsh Vasoconstrictors
- Formulated with Natural Active Ingredients
- Gluten and Dairy Free
- Safe for use with contacts*

FAQ's

Q: How often should I use the eye drops?

A: The recommended dose is 1 to 2 drops per eye as needed. Continue use until symptoms diminish. Similasan eye drops can then be used as often as needed.

Q: Can I still use the product after 30 days?

A: Similasan eye drops use a mild preservative that guarantees the product will be free of contaminants for 30 days after opening. If bottle has been open for more than 30 days, please discard it. Please do not use the product if past the expiration date noted on the bottle and the carton.

Q: Can I use Similasan eye drops with my contacts?

A: *Similasan has formally tested its eye drops for compatibility with contacts. Because of the natural active ingredients there is nothing in the product that will damage the lens. The drops will not harm your contact lenses, however if you have allergies or redness, it is best to avoid lenses for a while until symptoms subside. Allergens and irritants can become trapped under lenses and prevent the drops from working as well as they should.
