(57) **ABSTRACT**

The aim of this invention is to provide a complete system to create, to deploy and to execute rich multimedia applications on various terminals and in particular embedded devices. A rich multimedia application is made of one or more media objects, being audio or visual, synthetic or natural, metadata, and their protection being composed and rendered on a display device over time in response to preprogrammed logic and user interaction. We describe the architecture of such a terminal, how to implement it on a variety of operating systems and devices, and how it executes down-loaded rich, interactive, multi-media applications, and the architecture of such applications.
