

DECLARATION OF NATHANIEL E FRANK-WHITE

1. I am a Records Request Processor at the Internet Archive. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browseable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

7. I declare under penalty of perjury that the foregoing is true and correct.

DATE: September 13, 2023

THE SOLUTION

Unified Patents Solution

Micro Pools

Unified Patents' Micro-Pool strategy is designed to protect the investments that companies are making in key technologies that are vulnerable to NPE liability.

"We provide a comprehensive solution of offense and defense to protect our member's most important technology investments."

- Kevin Jakel, CEO

Home > The Solution > Unified Patents' Collaborative Deterrence Approach

UNIFIED PATENTS' COLLABORATIVE DETERRENCE APPROACH

Unified Patents offers subscriptions to startups, small and medium-sized businesses, and large companies in protected technologies, called Micro-Pools. Unified Patents fiercely protects each Micro-Pool from NPE encroachment by deterring NPEs from approaching a protected technology in the first place.

Each Micro-Pool deploys a host of defensive and offensive strategies to deter NPEs from a protected technology by:

- ▶ Monitoring companies in the protected technology (Micro-Pool) to identify NPE activity
- ▶ Competing head-to-head against NPEs to purchase or license patents that are sought by NPEs
- ▶ Reexamining patents in the protected technology that are owned by NPEs
- ▶ Reducing the number of patents available to NPEs in the protected technology
- ▶ Reducing effectiveness of demand letter campaigns against the protected technology
- ▶ Incentivizing startup and small company participation such that NPEs have few easy targets in the protected technology

The result of Unified Patents' proactive approach is a unique, effective and far less costly solution than litigating against NPEs. Unified Patents' solution delivers greater freedom to operate for Micro-Pool members and increases access to intellectual property for large and small companies. By partnering companies of all sizes, Micro-Pools can help make collaboration against NPEs much more effective.

Subscription to a Micro-Pool is calculated based on a fee schedule tied to company revenue and may be free for startups or small companies. Because Unified Patents offers its Micro-Pool solution on a technology-by-technology basis, companies can subscribe to and pay for only those Micro-Pools they need. This structure provides complete alignment between Unified Patents and its member companies. Companies can be confident that their subscription fees are exclusively used to reduce the risk of NPEs targeting their key technologies.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
