1 based on something called ATM, which was 2 asycronus transfer mode. And we were looking 3 at how to do wireless multimedia for Bell Labs 4 in around the 1994 timeframe. 5 Q. So by multimedia, you mean video streaming? 6 A. Could be video, audio, images, conferencing, 7 things like that, yes. 8 Q. So that's what you started -- what else -- how 9 had that work developed? 10 A. Okay. So that work continued a long time and 11 became part of several products that Lucent 12 Technologies sold, and that work then expanded 13 to do more than what we call cold processing to 14 do things like location management, 15 authentication, interworking between different 16 types of systems. So that was one vein of work 17 I did. 18 Q. Was any of this work that you had for Bell 19 Labs, had any of this ended up being patented? 20 A. Quite a bit of it ended up being patented. 21 Q. And I think in your CV you have a list of your 22 patents. Do you know which ones relate to what

A. I can try to highlight it from the titles.

you just described?

1 Q. What's the other work? 2 A. So we had work on mobile processing, so mobile 3 data processing. And that work I would break 4 it into at least three sections; we worked on 5 mobility management or packet data networks, 6 wireless packet data networks; we worked on 7 systems that had what we call "thin clients," 8 so these were mobile systems that relied on 9 servers in the network to help execute services 0 and applications. And then we worked on .1 advanced messaging, mobile messaging services. 2 Q. What is "mobility management"? 3 A. So that's tracking the location of mobile 4 devices and users and then locating them more 5 precisely when communication was supposed to 6 take place and authenticating. 7 Q. The last part of your sentence, you said 8 something about accessing when location is 9 supposed to take place. I'm sorry? 0 A. Yes. So there's tracking the location of a 1 device and/or a user to a certain granularity, 2 and then when someone wants to communicate with 3 that person or device finding them precisely to 4 deliver the communications, so there's an
