project?

1

- 2 A. Yeah. Initially, I thought I can't -- you know, I can't
- 3 do it again, it's too tough, and I sort of -- I was at my
- 4 house, and -- and he started coming over, and we talked about
- 5 | the internet, which we both love, and how, you know -- it was
- 6 his idea initially about how we -- the internet could be
- 7 | completely in a different way, way more efficient, way faster,
- 8 | way better, way cheaper, and what's called more elegant. A
- 9 more elegant solution, any thing which is more elegant means
- 10 | it presents itself in different ways to be better.
- 11 Q. Okay. So you decided to go into business, and what was
- 12 | that business? What did it end up being?
- 13 A. That's the business that we are talking about today.
- 14 Q. And the name of the company was -- is?
- 15 A. Well, the name is Bright Data.
- 16 Q. Okay.
- 17 | A. We all seem to have changed the name over time.
- 18 | Q. Okay. At that time, what was the name of the company?
- 19 | A. I think when we started, we were calling it the Zone
- 20 | Project. And then it changed to Hola, and at some point we
- 21 | had different products.
- 22 Q. All right. So I want to talk to you about the company
- 23 Hola.
- 24 A. Yes.
- 25 | Q. Okay? About what time period are we in with Hola?

- A. I should say that it's all the same company.
- 2 Q. Okay.

1

- 3 A. So, you know, we're talking about -- when we started this
- 4 | company, we are talking about 2008. Again, we are in my house
- and discussing this idea of how the internet could be better.
- 6 And initially I was saying, no, you know, I'm not going to do
- 7 | it, but it was just too good. Like we can really change the
- 8 | way the internet works. And so I said, you know, let's do it.
- 9 And that's when we founded the company, which is today Bright
- 10 Data.
- 11 Q. Okay. So Hola, which is now Bright Data, started in
- around 2008 with ideas from you and Mr. Shribman?
- 13 A. That's correct.
- 14 Q. All right. And what was the idea that relates to the
- 15 | patents that we're here on today? How does that relate at
- 16 | Hola and in that time period what we're here on today?
- 17 | A. Right. So there needs to be distinction, at least there
- 18 | is in my mind as an entrepreneur, between what your -- what
- 19 | your idea is and then how you sell the idea. And typically
- 20 | we're much less -- it sounds strange, but we are much less
- 21 | concerned about how to sell it because the real problem in
- 22 | business is how do you give value to people, selling it is
- 23 | basically getting the value -- some of the value back.
- And so what attracted me to the business was, here's a
- 25 | new way to build the internet and it's elegant so it presents

- 1 itself in many different ways. Okay? And so we were
- 2 | thinking, this is -- the technology we are going to develop,
- 3 | it will make things much better, but which are the things that
- 4 | we should sell first?
- 5 Q. Okay.
- 6 A. And so we thought that what would be most attractive to
- 7 | people first is internet acceleration.
- 8 Q. Now you're talking about speed.
- 9 A. We thought that people would like to install this
- 10 technology because it would make their internet faster.
- 11 Q. All right. And how did that turn out?
- 12 A. Not so good.
- 13 Q. All right.
- 14 A. Well, technically good because it works, so we were very
- 15 | excited, and after four years of working on this, day and
- 16 | night, we launched the product. And, you know, we were
- 17 | expecting everyone to, like, be super excited about it, and
- 18 | people didn't like the product. I mean, it worked, but nobody
- 19 | cared about the speed. And so people weren't installing it.
- 20 And so we had like, you know, I don't know 10, 20 installs a
- 21 day and that's it.
- 22 Q. Okay.
- 23 A. People didn't care.
- 24 | Q. All right. So when you went back to Mr. Shribman to the
- 25 drawing board, let's call it, what did you decide to do with

the technology that --

A. Well, first of all, the feeling is -- is horrible because you spent, you know, your life or your -- four years of your life doing this, this is all we did day and night, weekend, and nobody cared.

But because we were already more experienced, we had --we had come quickly to the conclusion that we failed in what we offered as the -- the benefit to the people, the speed.

But we said, look, this technology does a lot of things. It's a more elegant internet. So what are the other things that we can offer to people? And we made a list of eight different things, if I remember correctly, that could be interesting to people to use our technology for, the same technology that we created.

- Q. All right. And you're talking about the technology created that was embodied in what are now the patents?
- 17 A. Yes.
 - Q. All right. And so you had that list of eight things after you had went back to the drawing board with the technology that's in the patents, and what did you come up with that became a success?
 - A. Yeah. So we actually didn't go back to the drawing boards physically because the drawing boards are for the technology, it's the same technology. We just said, let's -- let's offer this -- present this differently to people.

DOCKET

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
