(54) Abstract Title: **Ticket and authentication data stored on portable handset**

(57) A portable handset, such as a mobile phone 3, PDA or pager, is used to store both ticket information, representing a ticket purchased from a ticket provider, and authentication information so that authentication of the ticket at the point of use does not involve communication with the ticket provider. The ticket information can be stored on a SIM card together with authentication security software. Authentication may involve an authentication string or graphics displayed on a screen and recognised by the software held by a ticket inspector. The ticket may be bought from the Internet using WAP software and paid for by credit card or funds stored in an e-purse in the handset.
