Mail Stop Patent Application

Commissioner for Patents P.O. Box 1450

Alexandria, VA 22313-1450

Presented for filing is a new original patent application of:

Applicant: ERIC FOXLIN

BOSTON DALLAS Title:

TRACKING, AUTO-CALIBRATION, AND MAP-BUILDING

SYSTEM

DELAWARE

NEW YORK

SAN DIEGO

SILICON VALLEY
TWIN CITIES

WASHINGTON, DC

Enclosed are the following papers, including those required to receive a filing date under 37 CFR §1.53(b):

Specification 77
Claims 14
Abstract 1

Declaration [To be Filed at a Later Date]

Drawing(s) 12

Enclosures:

- Postcard.

This application claims the benefit of U.S. Provisional Application No. 60/402,178, filed August 9, 2002, titled "Localization, Auto-Calibration, and Map-Building," the contents of which are incorporated herein by reference.

Basic filing fee	\$375
Total claims in excess of 20 times \$9	\$495
Independent claims in excess of 3 times \$42	\$378
Fee for multiple dependent claims	\$0
Total filing fee:	\$1248

Under 37 CFR §1.53(f), no filing fee is being paid at this time.

TRACKING, AUTO-CALIBRATION, AND MAP-BUILDING SYSTEM

Cross-Reference to Related Applications

[01] This application claims the benefit of U.S. Provisional Application No. 60/402,178, filed August 9, 2002, titled "Localization, Auto-Calibration, and Map-Building," the contents of which are incorporated herein by reference.

Background

- [02] This invention relates to tracking, navigation, pose estimation, localization, autocalibration, scene modeling, structure-from-motion and/or map-building based on sensor inputs.
- [03] Tracking or navigation systems often make use of measurements from sensors to aid in determining a location ("localization") or an orientation (attitude and heading) or a pose (position and orientation) of an object such as a person, a vehicle or a robot as it navigates in an environment, such as within the bounds of a building. A variety of types of sensors are available for such systems, including sensors that measure a relative location between a sensor and a target. An example of such a sensor/target combination is an acoustic emitter (target) and a microphone array (sensor) that can determine a direction of arrival of an acoustic signal broadcast from the emitter. Different types of sensors measure different aspects of the relative pose of a sensor and a target, such as a range, direction, or relative orientation. Different sensors may have different measurement characteristics that affect the mapping between the relative pose of a sensor and a target and the measurement values provided by the sensor. These characteristics can include uncertainty or noise characteristics of the measurement values.
- [04] Systems have been developed that use Kalman Filtering techniques to incorporate information in sensor measurements to track the position or orientation of an object, typically also using information about the dynamic characteristics of the object. The implementation of such Kalman Filtering techniques is often complex, and typically

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
