**Palm Held Orientation**

A digital Palmcorder® so compact, it fits securely and comfortably in the palm of your hand. However, it's not so much how small it is, rather it's how something so small can do so much. It uses the revolutionary Mini DV format, so it's capable of delivering over 380 lines of horizontal resolution. That's better than a live TV broadcast! It can also record CD-quality audio and make digital copies of your personal recordings without a loss in picture quality.

Home Editing Possibilities

Now you can edit your videos and pictures—just like the pros—for a wide variety of home, school and business applications. Using the industry standard IEEE 1394 interface, connect the [PV-DV910](#) camcorder to another digital camera (cable optional) to create precise copies of a home video. Or, connect to a personal computer,* an edit control deck or other properly equipped video equipment (cable optional) for advanced editing and viewing purposes.

Visit the [Adaptec](#) and [Digital Origin](#) web sites for information about IEEE 1394 solution packages that are compatible with the Panasonic PV-DV910 digital Palmcorder for video and photo editing.

Zoom Capabilities

The PV-DV910 digital camcorder is equipped with a lens capable of an extraordinary 18:1 optical zoom. This acts like a telescope to produce close-ups with extreme clarity so you won't miss a single detail. The camcorder is also equipped with a 300x** digital zoom for an even closer shot.

Audio Editing Capabilities

Do audio dubbing, too. You'll be able to replace audio without affecting the existing video. PCM technology allows you to record audio with extreme fidelity for magnificently crisp audio. Choose between one set of 16-bit stereo for CD-quality audio, or 2 sets of 12-bit stereo which allows you to add new audio while maintaining existing audio—perfect for inserting background music or commentary to your videos.
