A dialogue control system, a dialogue control method and a robotic device are capable of remarkably improving the entertainment factor. In the dialogue control system in which a robot and the information processing device are connected via the network, in the case of conducting the conversation by word games between the robot and the user, the history data regarding the word game in said user's speech content is formed and transmitted to the information processing device. Then, said information processing device selectively reads out the contents best suited to the user based on said history data from the memory means and provides to the original robot.
