

Annex A

(normative)

Protocol Implementation Conformance Statement (PICS) proforma

A.1 Introduction

The supplier of a protocol implementation that is claimed to conform to ISO/IEC 8802.11: 1999 shall complete the following PICS proforma.

A completed PICS proforma is the PICS for the implementation in question. The PICS is a statement of which capabilities and options of the protocol have been implemented. The PICS can have a number of uses, including use

- a) By the protocol implementor, as a checklist to reduce the risk of failure to conform to the standard through oversight;
- b) By the supplier and acquirer, or potential acquirer, of the implementation, as a detailed indication of the capabilities of the implementation, stated relative to the common basis for understanding provided by the standard PICS proforma;
- c) By the user, or potential user, of the implementation, as a basis for initially checking the possibility of interworking with another implementation (note that, while interworking can never be guaranteed, failure to interwork can often be predicted from incompatible PICS proformas);
- d) By a protocol tester, as the basis for selecting appropriate tests against which to assess the claim for conformance of the implementation.

A.2 Abbreviations and special symbols

A.2.1 Status symbols

M	mandatory
O	optional
O.<n>	optional, but support of at least one of the group of options labeled by the same numeral <n> is required
pred:	conditional symbol, including predicate identification

A.2.2 General abbreviations

N/A	not applicable
AD	address function capability
CF	implementation under test (IUT) configuration
FR	MAC frame capability
FS	frame sequence capability
PC	protocol capability
PICS	protocol implementation conformance statement

A.3 Instructions for completing the PICS proforma

A.3.1 General structure of the PICS proforma

The first part of the PICS proforma, Implementation identification and Protocol summary, is to be completed as indicated with the information necessary to identify fully both the supplier and the implementation.

The main part of the PICS proforma is a fixed questionnaire, divided into subclauses, each containing a number of individual items. Answers to the questionnaire items are to be provided in the rightmost column, either by simply marking an answer to indicate a restricted choice (usually Yes or No) or by entering a value or a set or a range of values. (Note that there are some items where two or more choices from a set of possible answers may apply. All relevant choices are to be marked in these cases.)

Each item is identified by an item reference in the first column. The second column contains the question to be answered. The third column contains the reference or references to the material that specifies the item in the main body of ISO/IEC 8802-11: 1999. The remaining columns record the status of each item, i.e., whether support is mandatory, optional, or conditional, and provide the space for the answers (see also A.3.4). Marking an item as supported is to be interpreted as a statement that all relevant requirements of the subclauses and normative annexes, cited in the References column for the item, are met by the implementation.

A supplier may also provide, or be required to provide, further information, categorized as either Additional Information or Exception Information. When present, each kind of further information is to be provided in a further subclause of items labeled A<J> or X<J>, respectively, for cross-referencing purposes, where <J> is any unambiguous identification for the item (e.g., simply a numeral). There are no other restrictions on its format or presentation.

The PICS proforma for a station consists of A.4.1 through A.4.4 inclusive, and at least one of A.4.5, A.4.6, or A.4.7 corresponding to the PHY implemented.

A completed PICS proforma, including any Additional Information and Exception Information, is the PICS for the implementation in question.

NOTE—Where an implementation is capable of being configured in more than one way, a single PICS may be able to describe all such configurations. However, the supplier has the choice of providing more than one PICS, each covering some subset of the implementation's capabilities, if this makes for easier and clearer presentation of the information.

A.3.2 Additional information

Items of Additional Information allow a supplier to provide further information intended to assist in the interpretation of the PICS. It is not intended or expected that a large quantity of information will be supplied, and a PICS can be considered complete without any such information. Examples of such Additional Information might be an outline of the ways in which an (single) implementation can be set up to operate in a variety of environments and configurations, or information about aspects of the implementation that are outside the scope of this standard but have a bearing upon the answers to some items.

References to items of Additional Information may be entered next to any answer in the questionnaire, and may be included in items of Exception Information.

A.3.3 Exception information

It may happen occasionally that a supplier will wish to answer an item with mandatory status (after any conditions have been applied) in a way that conflicts with the indicated requirement. No preprinted answer will be found in the Support column for this. Instead, the supplier shall write the missing answer into the Support column, together with an X<>> reference to an item of Exception Information, and shall provide the appropriate rationale in the Exception Information item itself.

An implementation for which an Exception Information item is required in this way does not conform to ISO/IEC 8802-11: 1999.

NOTE—A possible reason for the situation described above is that a defect in ISO/IEC 8802-11: 1999 has been reported, a correction for which is expected to change the requirement not met by the implementation.

A.3.4 Conditional status

The PICS proforma contains a number of conditional items. These are items for which both the applicability of the item itself, and its status if it does apply, mandatory or optional, are dependent upon whether or not certain other items are supported.

Where a group of items is subject to the same condition for applicability, a separate preliminary question about the condition appears at the head of the group, with an instruction to skip to a later point in the questionnaire if the Not Applicable (N/A) answer is selected. Otherwise, individual conditional items are indicated by a conditional symbol in the Status column.

A conditional symbol is of the form “<pred>:<S>”, where “<pred>” is a predicate as described below, and “<S>” is one of the status symbols M or O.

If the value of the predicate is true, the conditional item is applicable, and its status is given by S: the support column is to be completed in the usual way. Otherwise, the conditional item is not relevant and the N/A answer is to be marked.

A predicate is one of the following:

- a) An item-reference for an item in the PICS proforma: the value of the predicate is true if the item is marked as supported, and is false otherwise.
- b) A boolean expression constructed by combining item-references using the boolean operator OR: the value of the predicate is true if one or more of the items is marked as supported, and is false otherwise.

Each item referenced in a predicate, or in a preliminary question for grouped conditional items, is indicated by an asterisk in the Item column.

A.4 PICS proforma—ISO/IEC 8802-11: 1999⁷

A.4.1 Implementation identification

Supplier	
Contact point for queries about the PICS	
Implementation Name(s) and Version(s)	
Other information necessary for full identification, e.g., name(s) and version(s) of the machines and/or operating systems(s), system names	

NOTES

- 1—Only the first three items are required for all implementations. Other information may be completed as appropriate in meeting the requirement for full identification.
- 2—The terms Name and Version should be interpreted appropriately to correspond with a supplier's terminology (e.g., Type, Series, Model).

A.4.2 Protocol summary, ISO/IEC 8802-11: 1999

Identification of protocol standard	ISO/IEC 8802-11: 1999
Identification of amendments and corrigenda to this PICS proforma that have been completed as part of this PICS	Amd. : Corr. : Amd. : Corr. :
Have any exception items been required? (See A.3.3; the answer Yes means that the implementation does not conform to ISO/IEC 8802-11: 1999.)	Yes <input type="checkbox"/> No <input type="checkbox"/>
Date of statement (dd/mm/yy)	

⁷*Copyright release for PICS proforma:* Users of this standard may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

A.4.3 IUT configuration

Item	IUT configuration	References	Status	Support
* CF1	What is the configuration of the IUT? Access Point (AP)	5.2	O.1	Yes <input type="checkbox"/> No <input type="checkbox"/>
* CF2	Independent station (<i>not</i> an AP)	5.2	O.1	Yes <input type="checkbox"/> No <input type="checkbox"/>
* CF3	Frequency-Hopping spread spectrum (FHSS) PHY for the 2.4 GHz band		O.2	Yes <input type="checkbox"/> No <input type="checkbox"/>
* CF4	Direct Sequence Spread Spectrum (DSSS) PHY for the 2.4 GHz band		O.2	Yes <input type="checkbox"/> No <input type="checkbox"/>
* CF5	Infrared PHY		O.2	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.4 MAC protocol

A.4.4.1 MAC protocol capabilities

Item	Protocol capability	References	Status	Support
PC1	Are the following MAC protocol capabilities supported? Authentication service	5.4.3.1, 5.4.3.2, 5.7.6, 5.7.7, 8.1, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC1.1	Authentication state	5.5	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC1.2	Open System authentication	8.1.1	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC1.3	Shared Key authentication	8.1.2, 8.3	PC2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
* PC2	WEP algorithm	5.4.3.3, 8.2, Annex C	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC2.1	WEP Encryption procedure	8.2.3, 8.2.4, 8.2.5	PC2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC2.2	WEP Decryption procedure	8.2.3, 8.2.4, 8.2.5	PC2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC2.3	Security services management	8.3	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3	Distributed Coordination function	9.1, 9.2, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.1	Net Allocation Vector (NAV) function	9.2.1, 9.2.5, 9.3.2.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.2	Interframe space usage and timing	9.2.3, 9.2.5, 9.2.10	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.3	Random Backoff function	9.2.4	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.4	DCF Access procedure	9.2.5.1, 9.2.5.5	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.5	Random Backoff procedure	9.2.5.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.6	Recovery procedures and retransmit limits	9.2.5.3	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.7	RTS/CTS procedure	9.2.5.4, 9.2.5.6, 9.2.5.7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.4.1 MAC protocol capabilities (*continued*)

Item	Protocol capability	References	Status	Support
PC3.8	Directed MPDU transfer	9.2.6	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.9	Broadcast and multicast MPDU transfer	9.2.7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.10	MAC level acknowledgment	9.2.2, 9.2.8	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC3.11	Duplicate detection and recovery	9.2.9	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
* PC4	Point coordinator (PC)	9.1, 9.3, Annex C	CF1:O	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC4.1	Maintenance of CFP structure and timing	9.3.1, 9.3.2	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC4.2	PCF MPDU transfer from PC	9.3.3	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
* PC4.3	PCF MPDU transfer to PC	9.3.3	PC4:O	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC4.4	Overlapping PC provisions	9.3.3.2	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC4.5	Polling list maintenance	9.3.4	PC4.3: M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
* PC5	CF-Pollable	9.1, 9.3, Annex C	CF2:O	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC5.1	Interpretation of CFP structure and timing	9.3.1, 9.3.2	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC5.2	PCF MPDU transfer to/from and CF-Pollable STA	9.3.3	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC5.3	Polling list update	9.3.4	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC6	Fragmentation	9.2, 9.4, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC7	Defragmentation	9.2, 9.5, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC8	MAC data service	9.1.5, 9.8, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC8.1	Reorderable-Multicast service class	9.8	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC8.2	StrictlyOrdered service class	9.8	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC9	Multirate support	9.6, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
* PC10	Multiple outstanding MSDU support	9.8, Annex C	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC10.1	Multiple outstanding MSDU transmission restrictions	9.8	PC10:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11	Timing synchronization	11.1, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC11.1	Timing in an infrastructure network	11.1.1, 11.1.4	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.2	Timing in an Independent BSS (IBSS)	11.1.1.2, 11.1.4	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.3	Beacon Generation function	11.1.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.5	TSF synchronization and accuracy	11.1.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC11.5	Infrastructure BSS initialization	11.1.3	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>

A.4.4.1 MAC protocol capabilities (continued)

Item	Protocol capability	References	Status	Support
PC11.6	Independent BSS initialization	11.1.3	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.7	Passive scanning	11.1.3	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.8	Active scanning	11.1.3	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC11.9	Probe response	11.1.3	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC11.10	Hop Synchronization function	11.1.5	CF3:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12	Infrastructure power management	11.2.1, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC12.1	Station power management modes	11.2.1.1, 11.2.1.8	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.2	TIM transmission	11.2.1.2, 11.2.1.3	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.3	AP function during CP	11.2.1.4	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.4	AP function during CFP	11.2.1.5	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.5	Receive function during CP	11.2.1.6	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.6	Receive function during CFP	11.2.1.7	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC12.7	Aging function	11.2.1.9	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC13	IBSS power management	11.2.2, Annex C	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC13.1	Initialization of power management	11.2.2.2	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC13.2	STA power state transitions	11.2.2.3	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC13.3	ATIM and frame transmission	11.2.2.4	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC14	Association and reassociation	5.4, 5.7, 11.3, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC14.1	Association state	5.5	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC14.2	STA association procedure	11.3.1	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC14.3	AP association procedure	11.3.2	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC14.4	STA reassociation procedure	11.3.3	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC14.5	AP reassociation procedure	11.3.4	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC15	Management information base (MIB)	Annex D	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC15.1	dot11SMTbase, dot11SmtAuthenticationAlgorithms	Annex D	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
* PC15.2	dot11SMTprivacy	Annex D	PC2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
PC15.3	dot11MACbase, dot11CountersGroup, dot11MacGroupAddresses	Annex D	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
* PC15.4	dot11MACStatistics	Annex D	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
PC15.5	dot11ResourceTypeID	Annex D	M	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.4.2 MAC frames

Item	MAC frame	References	Status	Support
	Is transmission of the following MAC frames supported?	7, Annex C		
FT1	Association request	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT2	Association response	7	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT3	Reassociation request	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT4	Reassociation response	7	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT5	Probe request	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT6	Probe response	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT7	Beacon	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT8	ATIM	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT9	Disassociation	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT10	Authentication	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT11	Deauthentication	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT12	PS-Poll	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT13	RTS	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT14	CTS	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT15	ACK	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT16	CF-End	7	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT17	CF End+CF-Ack	7	PC4:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT18	Data	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT19	Data + CF-Ack	7	(PC4 OR PC5):M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT20	Data + CF-Poll	7	PC4.3:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT21	Data + CF-Ack+CF-Poll	7	PC4.3:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT22	Null	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FT23	CF-Ack (no data)	7	(PC4 OR PC5):M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT24	CF-Poll (no data)	7	PC4.3:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FT25	CF-Ack+CF-Poll (no data)	7	PC4.3:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
	Is reception of the following MAC frames supported?	7, Annex C		
FR1	Association request	7	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR2	Association response	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR3	Reassociation request	7	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR4	Reassociation response	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR5	Probe request	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR6	Probe response	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR7	Beacon	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR8	ATIM	7	CF2:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR9	Disassociation	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR10	Authentication	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.4.2 MAC frames (*continued*)

Item	MAC frame	References	Status	Support
FR11	Deauthentication	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR12	PS-Poll	7	CF1:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR13	RTS	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR14	CTS	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR15	ACK	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR16	CF-End	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR17	CF End+CF-Ack	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR18	Data	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR19	Data + CF-Ack	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR20	Data + CF-Poll	7	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR21	Data + CF-Ack+CF-Poll	7	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR22	Null	7	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FR23	CF-Ack (no data)	7	(PC4 OR PC5):M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR24	CF-Poll (no data)	7	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
FR25	CF-Ack+CF-Poll (no data)	7	PC5:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>

A.4.4.3 Frame exchange sequences

Item	Frame exchange sequence	References	Status	Support
	Are the following frame sequences supported?			
FS1	Basic frame sequences	9.7, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FS2	CF-Frame sequences	9.7, Annex C	(PC4 OR PC5):M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>

A.4.4.4 MAC addressing functions

Item	MAC Address function	References	Status	Support
	Are the following MAC Addressing functions supported?			
AD1	STA universal individual IEEE 802 address	5.3.3, 7.1.3.3	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
AD2	BSS identifier generation	7.1.3.3, 11.1.3, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
AD3	Receive address matching	7.1.3.3, 7.2.2, Annex C	M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>

A.4.5 Frequency-Hopping PHY functions

Item	Protocol feature	References	Status	Support
FH1	Which requirements and options does the PHY support?			
FH1.1	PHY service primitive parameters			
FH1.2	TXVECTOR parameter: LENGTH	14.2.2.1	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FH1.2.1	TXVECTOR parameter: PLCPBITRATE PLCPBITRATE = X'00' (1.0 Mbit/s)	14.2.2.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
* FH1.2.2	PLCPBITRATE = X'02' (2.0 Mbit/s)	14.2.2.2	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
FH1.3	RXVECTOR parameter: LENGTH	14.2.3.1	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FH1.4	RXVECTOR parameter: RSSI	14.2.3.2	O	Yes <input type="checkbox"/> No <input type="checkbox"/>
FH2	PLCP frame format			
FH2.1	PLCP Preamble: Sync	14.3.2.1.1	M	Yes <input type="checkbox"/> No <input type="checkbox"/>
FH2.2	PLCP Preamble: Start Frame Delimiter	14.3.2.1.2	M	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.7 Infrared baseband PHY functions

Item	Feature	References	Status	Support
IR1	Is the transmitted SYNC field length in the range of required number of PPM slots, with the absence of a pulse in the last slot of the field?	16.2.4.1	M	Yes <input type="checkbox"/>
IR2	Is the transmitted SYNC field entirely populated by alternating presence and absence of pulses in consecutive PPM slots, with the absence of a pulse in the last slot of the field?	16.2.4.1	M	Yes <input type="checkbox"/>
IR3	Is the transmitted SFD field the binary sequence 1001, where 1 indicates a pulse in the PPM slot and 0 indicates no pulse in the PPM slot?	16.2.4.2	M	Yes <input type="checkbox"/>
IR4	Is the transmitted DR field pulse sequence equal to the correct value for the data rate provided by the TXVECTOR parameter PLCP BITRATE, where 1 indicates a pulse in the PPM slot and 0 indicates no pulse in the PPM slot?	16.2.4.3	M	Yes <input type="checkbox"/>
IR5	Is the transmitted DCLA field 32 PPM slots long with the specified sequence for 1 Mbit/s, where 1 indicates a pulse in the PPM slot and 0 indicates no pulse in the PPM slot? 1 Mbit/s: 00000000100000000000000010000000	16.2.4.4	M	Yes <input type="checkbox"/>
* IR5a	Does the unit support 2 Mbit/s transmission?	16.2.4.4	O	Yes <input type="checkbox"/> No <input type="checkbox"/>

A.4.7 Infrared baseband PHY functions (*continued*)

Item	Feature	References	Status	Support
IR5b	If the unit supports 2 Mbit/s transmission, is the transmitted DCLA field 32 PPM slots long with the specified sequence for 2 Mbit/s, where 1 indicates a pulse in the PPM slot and 0 indicates no pulse in the PPM slot? 2 Mbit/s: 00100010001000100010001000100010	16.2.4.4	IR5a:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
IR6	Is the transmitted LENGTH field the correct PPM representation of the unsigned 16-bit binary integer, lsb transmitted first, equal to the correct value provided by the TXVECTOR parameter LENGTH?	16.2.4.5	M	Yes <input type="checkbox"/>
IR7	Is the transmitted CRC field the correct PPM representation of the CRC value calculated as per reference subclause, transmitted lsb first?	16.2.4.6	M	Yes <input type="checkbox"/>
IR8	Is the transmitted PSDU field the correct PPM representation of the PSDU, transmitted lsb first?	16.2.4.7	M	Yes <input type="checkbox"/>
IR9	When the CCA is false does transmission begin based on PHYTXSTART.request?	16.2.5.1	M	Yes <input type="checkbox"/>
IR10	Does the PHY issue a PHYTXSTART.confirm after the transmission of the PLCP header?	16.2.5.1	M	Yes <input type="checkbox"/>
IR11	Does the PHY accept each octet of the PSDU in a PHYDATA.request and answer with a PHYDATA.confirm?	16.2.5.1	M	Yes <input type="checkbox"/>
IR12	Does the PHY cease transmission in response to a PHYTXEND.request and answer with a PHYTXEND.confirm?	16.2.5.1	M	Yes <input type="checkbox"/>
IR13	Does the PHY of a receiving STA send a PHYCCA.indicate during reception of the SYNC field?	16.2.5.2	M	Yes <input type="checkbox"/>
IR14	Does the PHY of a receiving STA properly receive a transmission that changes data rate according to the DR field?	16.2.5.2	M	Yes <input type="checkbox"/>
IR15	Does the PHY of a receiving STA properly reject an incorrect CRC?	16.2.5.2	M	Yes <input type="checkbox"/>
IR16	Does the PHY of a receiving STA properly reject a DR field other than those specified in reference subclause?	16.2.5.2, 16.2.4.3	M	Yes <input type="checkbox"/>
IR17	Does the PHY of a receiving STA send PHYRXSTART.indicate with correct RATE and LENGTH parameters after proper reception of PLCP preamble and PLCP header?	16.2.5.2	M	Yes <input type="checkbox"/>
IR18	Does the PHY of a receiving STA forward receive octets in PHYDATA.indicate primitives?	16.2.5.2	M	Yes <input type="checkbox"/>
IR19	Does the PHY of a receiving STA send a PHYRXEND.indicate after the final octet indicated by the LENGTH field?	16.2.5.2	M	Yes <input type="checkbox"/>

A.4.7 Infrared baseband PHY functions (*continued*)

Item	Feature	References	Status	Support
IR20	Does the PHY of a receiving STA send a PHYCCA.indicate with a state value of IDLE after the PHYRXEND.indicate?	16.2.5.2	M	Yes <input type="checkbox"/>
IR21	Does the PHY reset its CCA detection mechanism upon receiving a PHYCARST.request, and respond with a PHYCCARST.indicate?	16.2.5.3	M	Yes <input type="checkbox"/>
IR22	When transmitting at 1 Mbit/s does the PHY transmit PPM symbols according to the 16-PPM Basic Rate Mapping table, transmitting from left to right?	16.3.2.1, 16.3.2.2	M	Yes <input type="checkbox"/>
IR23	When transmitting at 2 Mbit/s does the PHY transmit PPM symbols according to the 4-PPM Enhanced Rate Mapping table, transmitting from left to right?	16.3.2.1, 16.3.2.2	IR5a:M	Yes <input type="checkbox"/>
IR24	Does the PHY operate over a temperature range of 0 °C to 40 °C?	16.3.2.4	M	Yes <input type="checkbox"/>
* IR25	If the unit is conformant to emitter radiation mask 1, is the peak optical power of an emitted pulse within the specification range averaged over the pulse width?	16.3.3.1	O.1	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
* IR26	If the unit is conformant to emitter radiation mask 2, is the peak optical power of an emitted pulse within the specification range averaged over the pulse width?	16.3.3.1	O.1	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
IR27	Does the transmitted pulse shape conform to the description of the reference subclause?	16.3.3.2	M	Yes <input type="checkbox"/>
IR28	Does the emitter radiation pattern as a function of angle conform to the requirements of the reference subclause as applicable based on conformance to emitter radiation mask 1?	16.3.3.3	IR25:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
IR28a	Does the emitter radiation pattern as a function of angle conform to the requirements of the reference subclause as applicable based on conformance to emitter radiation mask 2?	16.3.3.3	IR26:M	Yes <input type="checkbox"/> No <input type="checkbox"/> N/A <input type="checkbox"/>
IR29	Is the peak emitter optical output as a function of wavelength in the range specified?	16.3.3.4	M	Yes <input type="checkbox"/>
IR30	Does the spectrum of the transmit signal amplitude as a voltage or current meet the requirements of the reference subclause?	16.3.3.5	M	Yes <input type="checkbox"/>
IR31	Does the receiver sensitivity meet the requirements of the reference subclause for receive signals of both 1 Mbit/s and 2 Mbit/s?	16.3.4.1	M	Yes <input type="checkbox"/>
IR32	Does the receiver exhibit a dynamic range as specified in reference subclause?	16.3.4.2	M	Yes <input type="checkbox"/>
IR33	Does the receiver field-of-view conform to the requirements of the reference subclause?	16.3.4.3	M	Yes <input type="checkbox"/>
IR34	When it is known that the conditions are such that the Carrier Detect Signal and the Energy Detect Signal are false is the CCA asserted IDLE?	16.3.5.1	M	Yes <input type="checkbox"/>

A.4.7 Infrared baseband PHY functions (*continued*)

Item	Feature	References	Status	Support
IR35	When the conditions are such that Energy Detect is true for greater than the time defined in reference subclause, does CCA become IDLE?	16.3.5.1	M	Yes <input type="checkbox"/>
IR36	When conditions are such that either Carrier Detect or Energy Detect go true, does CCA go BUSY?	16.3.5.1	M	Yes <input type="checkbox"/>
IR37	Are these compliance groups implemented? dot11PhyIRComplianceGroup, dot11PhyRegDomainsSupportGroup, and dot11PhyOperationComplianceGroup	16.4	M	Yes <input type="checkbox"/>

Annex B

(informative)

Hopping sequences

The following tables pertain to the hopping sequences for North America and ETSI.

Table B.1—Hopping sequence set 1

index	0	3	6	9	12	15	18	21	24	27	30	33	36
1	2	5	8	11	14	17	20	23	26	29	32	35	38

Annex C

(normative)

Formal description of MAC operation

This annex contains formal descriptions of the behavior of MAC station (STA) and access point (AP) entities. These descriptions also describe the frame formats and the generation and interpretation of information encoded in MAC frames, in the parameters of service primitives supported by the MAC, and in MIB attributes used or generated by the MAC. The MAC is described using the 1992 version of the ITU Specification and Description Language (SDL-92). SDL-92 is defined in ITU-T Recommendation Z.100 (03/93). An update to Z.100 was approved in 1996 (SDL-96), but none of the SDL facilities used in this annex were modified. An introduction to the MAC formal description is provided in Clause C.1. Definitions of the data types and operators used by the MAC state machines are provided in Clause C.2. An SDL system describing MAC operation at an IEEE 802.11 station is contained in Clause C.3. Finally, a subset of an SDL system describing the aspects of MAC operation at an IEEE 802.11 AP that differ from operation at a non-AP station is provided in Clause C.4.

In Annex D, the MAC and PHY management information bases are described in Abstract Syntax Notation One (ASN.1), defined in ISO/IEC 8824: 1990 and ISO/IEC 8825: 1990. ITU-T Recommendation Z.105 (03/95) defines the use of SDL in conjunction with ASN.1, allowing system behavior to be defined using SDL and data types to be defined using ASN.1. Incomplete tool support precluded the use of ITU-T Recommendation Z.105 in this annex. However, within the limits of ITU-T Recommendation Z.100 (referred to subsequently as Z.100), the data types in Clause C.2 are defined in a similar manner to ITU-T Recommendation Z.105 (referred to subsequently as Z.105). Annex E contains a listing of available documentation.

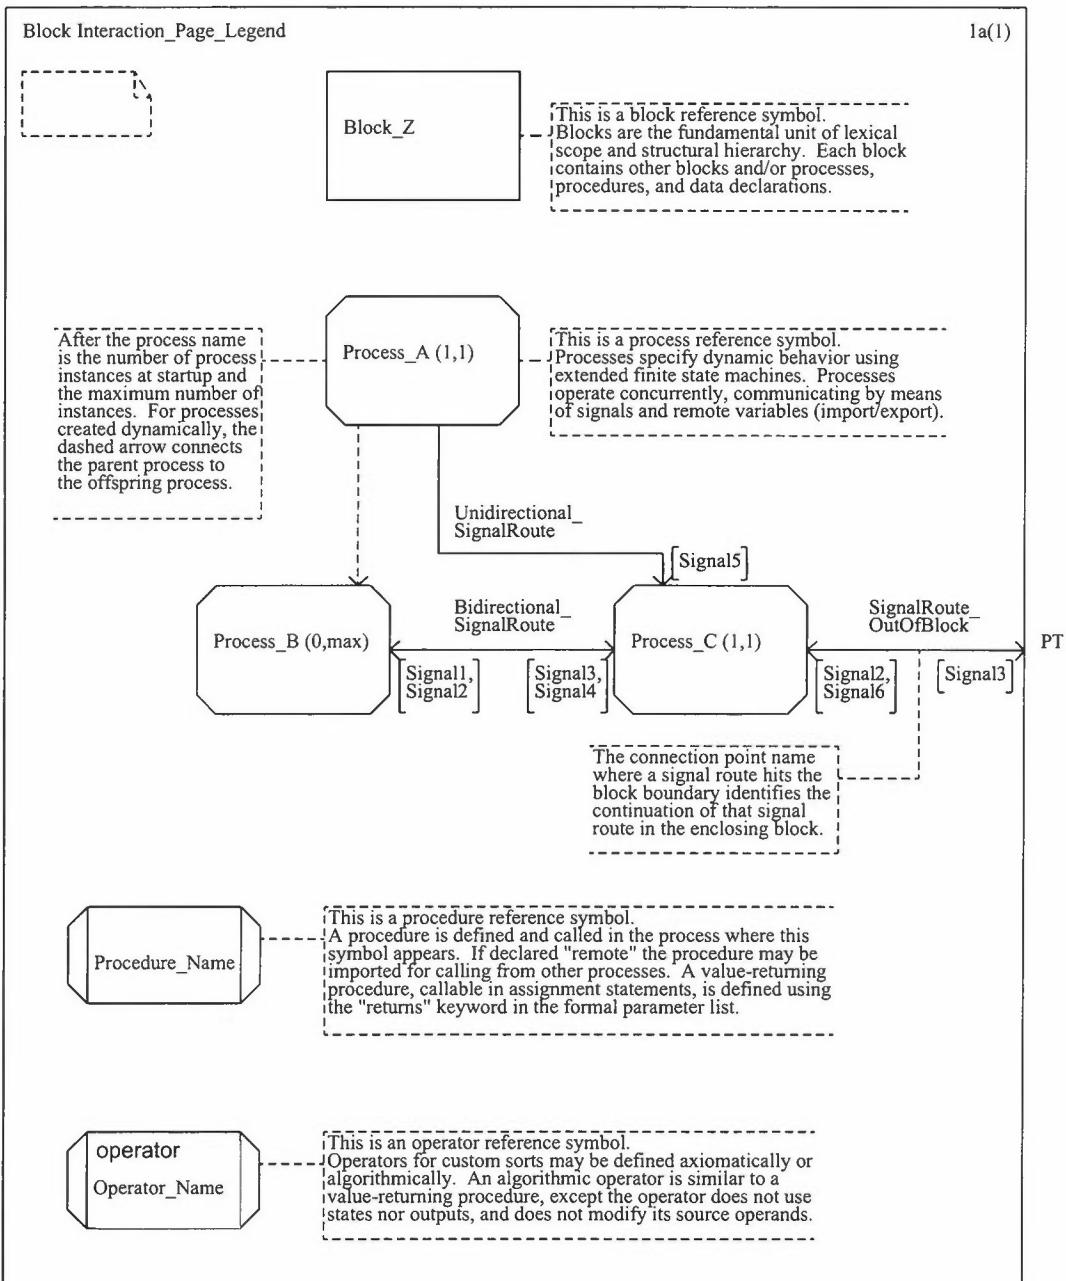

NOTES

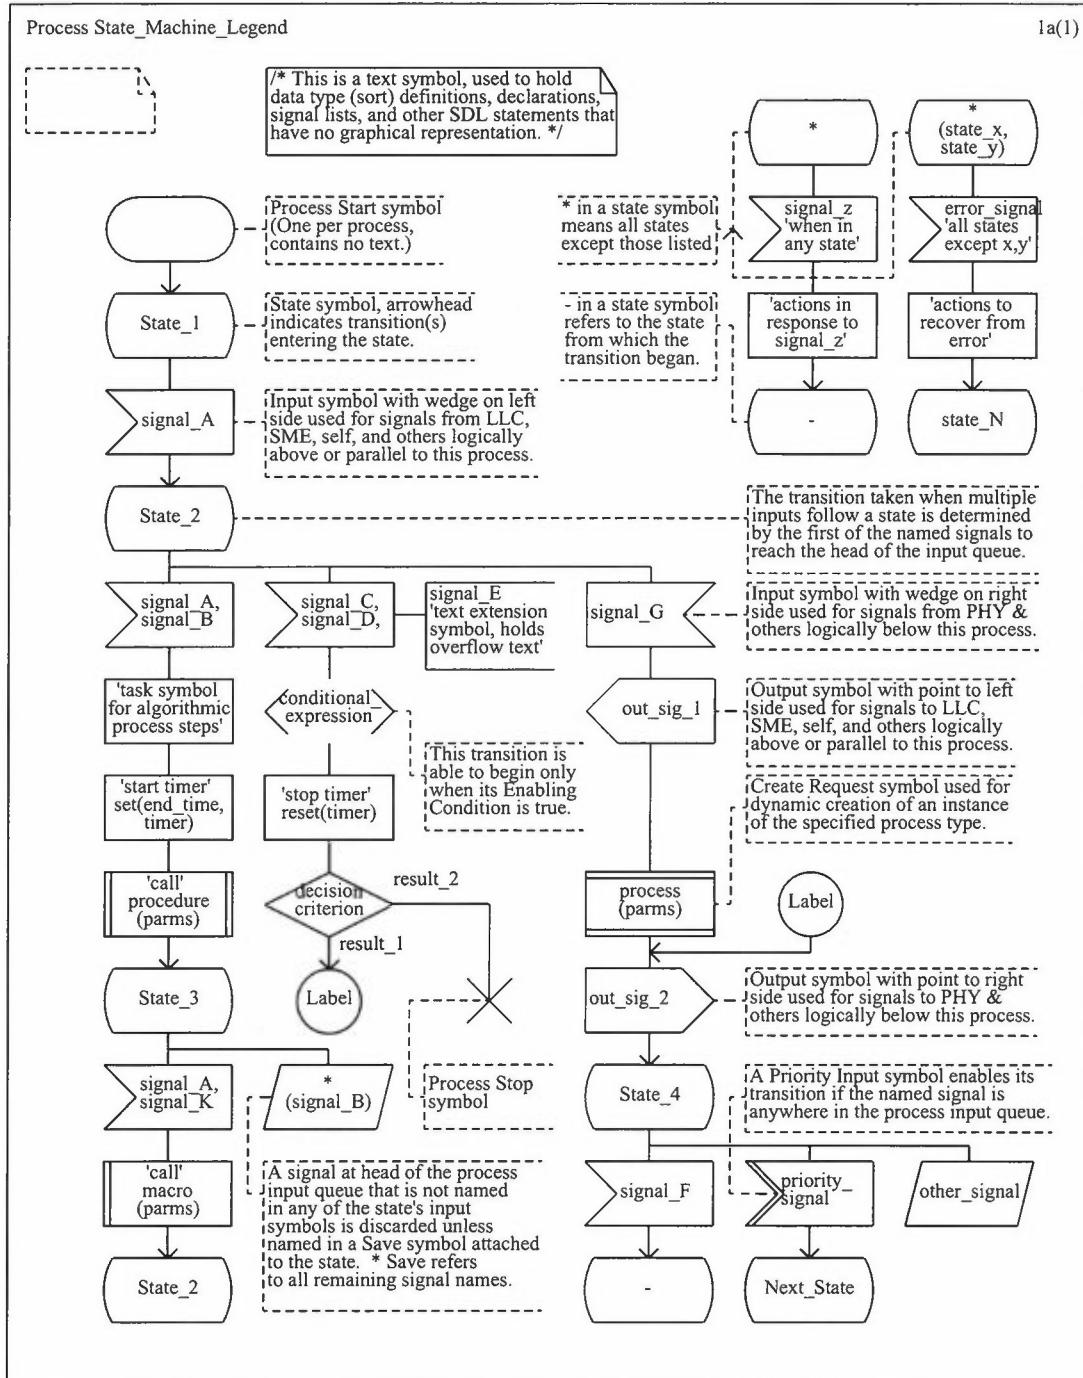

1—The SDL definitions in this annex should be usable with any SDL tool that supports the 1993 version or 1996 update of ITU-T Recommendation Z.100. Software for generating, analyzing, verifying, and simulating SDL system descriptions is available from several sources.

2—The SDL code in this annex was generated using *SDT/PC version 3.02*; from Telelogic AB, Malmo, Sweden (+46-40-174700; internet: telelogic.se); USA office in Princeton, NJ (+1-609-520-1935; internet: telelogic.com). Telelogic offers SDT for several workstation platforms in addition to SDT/PC.

3—The use of Telelogic's product to prepare this annex does not constitute an endorsement of SDT by the IEEE LAN MAN Standards Committee or by the IEEE.

4—The diagrams on the next two pages show most of the symbols of SDL graphical syntax (SDL-GR) used in the MAC formal description. The symbols in these diagrams have labels and comments that explain their meanings. These diagrams are intended to serve as a legend for the SDL-GR symbols that comprise most of the process interaction and state transition diagrams. These diagrams are neither a complete SDL system, nor a complete presentation of SDL-GR symbology. Also, this state machine fragment exists to illustrate the SDL graphical syntax, and does not describe any useful behavior.

C.1 Introduction to the MAC formal description

This formal description defines the behavior of IEEE 802.11 MAC entities. The MAC protocol functional decomposition used herein facilitates explicit description of the reference points and durations of the various timed intervals; the bases for generation and/or validation of header fields, service parameters, and MIB attributes; and the interpretation of each value in cases where enumerated data types are used in service parameters.

C.1.1 Fundamental assumptions

The MAC protocol is described as an SDL system, which is a set of extended finite state machines. Each state machine is a set of independent processes, all of which operate concurrently. All variable data-holding entities and procedures exist solely within the context of a single process. In SDL all interprocess communication is done with signals (there are no global variables). Signals may be sent and received explicitly, using SDL's output and input symbols, or implicitly, using SDL's export/import mechanism (only if the variables or procedures are declared "remote"). By default, signals incur delays when traversing channels between blocks; however, only nondelaying channels and signal routes are used in the MAC state machines, and all remote variables and procedures are declared with the "nodelay" property.

State transitions, procedure calls, and tasks (assignment statements and other algorithmic processing steps) are assumed to require zero time. This permits the time intervals that are part of the normative MAC behavior to be defined explicitly, using SDL timers. One unit of system time (a 1.0 change in the value of "now") is assumed to represent one microsecond of real time. Usec (microsecond) and TU (time unit) data types are defined, with operators to convert Usec and TU values to SDL time or duration when necessary.

The SDL system boundary encloses the MAC entities. The LLC, SME, PHY, and distribution system are part of the environment. SDL generally assumes that entities in the environment operate as specified; however, the MAC state machines that communicate with the various SAPs attempt to validate inputs from the environment, and to handle cases where a pair of communicating entities, one within the system and the other outside the system boundary, have different local views of the medium, station, or service state. All stations in an IEEE 802.11 service set are assumed to exhibit the behaviors described herein. Nevertheless, because of the open nature of the wireless medium, the MAC state machines check for error cases that can arise only when an entity on the wireless medium is transmitting IEEE 802.11 PDUs, but is not obeying the communication protocols specified by this standard.

C.1.2 Notation conventions

When practical, names used in the clauses of this standard are spelled identically in this annex. The principal exceptions are those names that conflict with one of SDL's reserved words (such as power management mode "active," which is renamed "sta_active" in SDL). To help fit the SDL text into the graphic symbols, acronyms with multiple, sequential capital letters are written with only the first letter capitalized (e.g., "MSDU" is written "Msdu" and "MLMEJoin.request" is written "MlmeJoin.request").

SDL reserved words and the names of variables and synonyms (named constants) begin with lowercase letters. The names of sorts (data types), signals, signal routes, channels, blocks, and processes begin with uppercase letters. The names of certain groups of variables and/or synonyms begin with a particular lowercase letter, followed by the remainder of the name, beginning with an uppercase letter. These groups are

"aNameOfAttribute"	PHY operational parameters.
"cNameOfCapability"	Capability bits, also used for internal values exported as MIB counters.
"dNameOfDuration"	Duration (relative time) values, declared as Usec, TU, or Duration.
"dot11NameOfAttribute"	MIB attributes.

“eNameOfElement”	Element ID values.
“mNameOfVariable”	Remote variables used for intra-MAC communication, but not part of the MIB. Most of these variables are exported from the MLME block.
“sNameOfStaticValue”	Synonyms for static data values used within the MAC.
“tNameOfTime”	Time (absolute time) values, declared as Usec, TU, or Time. The names of timers begin with “T.”

C.1.3 Modeling techniques

State machines are grouped according to defined function sets that are visible, directly or indirectly, at an exposed interface. The emphasis in the organization of the state machines is explicitly to show initiation of and response to events at the exposed interfaces, and time-related actions, including those dependent on the absence of external events (e.g., response timeouts) and intervals measured in derived units (e.g., backoff “time” in units of slots during which the wireless medium is idle). The operations associated with the various state transitions emphasize communication functions. Most of the details regarding insertion, extraction, and encoding of information in fields of the PDUs is encapsulated with the definitions of those fields. This approach, which relies heavily on SDL’s abstract data type and inheritance mechanisms, permits the behavior of the data-holding entities to be precisely defined, without obscuring process flow by adding in-line complexity to the individual state transitions.

The modeling of PDUs and SDUs requires sorts such as octet strings, and operators such as bitwise boolean functions, which are not predefined in SDL. These sorts and operators are defined in Package macsorts, which appears in Clause C.2.

Protocol and service data unit sorts are based on the **Bit** sort. Bit is a subtype of SDL’s predefined Boolean sort. As a result, Bit literals “0” and “1” are alternative names for “false” and “true,” and have no numeric significance. To use “0” or “1” as integer values requires a conversion operation. Items of the **Bitstring** sort are 0-origin, variable-length strings of Bits. With Bitstring operands, operators “and,” “or,” “xor,” and “not” operate bitwise, with the length of the result equal to the length of the longest (or only) source string. The **Octet** sort is a subtype of Bitstring that adds conversion operators to and from Integer. Each item of the Octet sort has length=8 {by usage convention in Z.100, enforced in Z.105}. Items of the **Octetstring** sort are 0-origin, variable-length strings of Octets. The **Frame** sort is a subtype of Octetstring that adds operators to extract and to modify all MAC header fields and most other MAC frame fields and elements. Most MAC fields and elements that contain named values with specific value assignments or enumerations are defined as subtypes of Frame, Octetstring, or Bitstring with the names added as literals or synonyms, so that the state machines can refer to the names without introducing ambiguity about the value encodings.

Where communication at a SAP or between processes is strictly first in first out (FIFO), the (implicit) input queue of the SDL processes is used. When more sophisticated queue management is needed, a queue whose entries are instances of one, specified sort is created using the **Queue** generator. Entries on Queue sorts may be added and removed at either the tail or the head, and the number of queue entries may be determined. The contents of a Queue may also be searched to locate entries with particular parameter values.

Clause C.2 contains an SDL-92 Package (a named collection of SDL definitions that can be included by reference into an SDL System specification), which is a formal description of the formats and data encodings used in IEEE 802.11 SDUs, PDUs, and the parameters of the service primitives used at each of the SAPs supported by the IEEE 802.11 MAC. This package also contains definitions for some data structures and operators used internally by one or more of the MAC state machines.

The behaviors of many intra-MAC operators are part of the normative description of the MAC protocol because results of the specified operations are visible, directly or indirectly, at exposed interfaces. For example, custom operators are used to define the generation of the CRC-32 value used in the FCS field (operator crc32, page 301), the calculation of frame transmission time used as part of the value in the Duration/ID field

in certain types of frames (operator calcDur, page 316), the comparison of the values of particular fields of a received MAC header with cached data values as part of the procedure for detecting duplicate frames (operator searchTupleCache, page 289), and numerous other aspects of frame formats and information encoding. On the other hand, data structures used solely for intra-MAC storage or for transferring of information between different state machines of a single station or access point, are only normative to the extent that they define items of internal state and the temporal sequence necessary for proper operation of the MAC protocol. The specific structures and encodings used for internal data storage and communication functions in this formal description do *not* constrain MAC implementations, provided those implementations exhibit the specified behaviors at the defined SAPs and, in conjunction with an appropriate PHY, on the wireless medium.

C.2 Data type and operator definitions for the MAC state machines

This clause is in SDL/PR (phrase notation), with the exception of procedural operators, which are defined in SDL/GR (graphic notation). Package macsorts contains the definitions of the sorts (data types with associated operators and literals) and synonyms (named constants) used by the MAC state machines. Package macmib defines data types for attributes in the MAC MIB, and portions of the PHY MIB, accessed by the MAC state machines. Package macmib exists solely to satisfy SDL's strong type checking in the absence of an SDL tool that fully supports Z.105 (the combined use of SDL with ASN.1).

Package macsorts 3101_d\MacEnum(31)

C.3 State machines for MAC stations

The following SDL-92 system specification defines operation of the MAC protocol at an IEEE 802.11 STA. Many aspects of STA operation also apply to AP operation. These are defined in blocks and processes referenced from both the STA and AP system specifications. Blocks and processes used in both STA and AP are identifiable by the SDL comment `/* for STA & AP */` below the block or process name. Blocks and processes specific to STA operation are identifiable by the SDL comment `/* station version */` below the block or process name. The definitions of all blocks and processes referenced in the station system specification appear in Clause C.3.

The remainder of Clause C.3 is the formal description, in SDL/GR, of an IEEE 802.11 STA.

C.4 State machines for MAC access point

The following SDL-92 system specification defines operation of the MAC protocol at an IEEE 802.11 AP. Many aspects of AP operation are identical to the STA operation. These are defined in blocks and processes referenced from both the STA and AP system specifications. Blocks and processes used in both STA and AP are identifiable by the SDL comment /* for STA & AP */ below the block or process name. Blocks and processes specific to AP operation are identifiable by the SDL comment /* AP version */ below the block or process name. Definitions for the /* AP version */ and the /* STA & AP */ blocks and processes appear in this subclause.

The remainder of this clause is the formal description, in SDL/GR, of an IEEE 802.11 AP.

    STATUS current

```

DESCRIPTION

"This attribute shall indicate the number of octets in an MPDU, below which an RTS/CTS handshake shall not be performed. An RTS/CTS handshake shall be performed at the beginning of any frame exchange sequence where the MPDU is of type Data or Management, the MPDU has an individual address in the Address1 field, and the length of the MPDU is greater than this threshold. (For additional details, refer to Table 21 in 9.7.) Setting this attribute to be larger than the maximum MSDU size shall have the effect of turning off the RTS/CTS handshake for frames of Data or Management type transmitted by this STA. Setting this attribute to zero shall have the effect of turning on the RTS/CTS handshake for all frames of Data or Management type transmitted by this STA. The default value of this attribute shall be 2347."

```
::= { dot11OperationEntry 2 }
```
