download 3B
now

A wonderful new way for broadband users to experience the web. 3B is a free, downloadable browser that renders the web as a 3-D city of display windows, each showing a different site.

Move around a 3B city as you wish, deciding at a glance which websites are worth visiting. Then enter a site to browse its contents. Related sites

group together into themed districts, like shopping districts in a real city. 3B is a welcome break from search engines and directories. It's fun and intuitive - as familiar as going window-shopping.

If you have broadband, are you still using an old narrowband browser? 3B optimises your investment.
