(57) **ABSTRACT**

A user input is received by a computing device. An interactive input module determines whether the first user input is a first character of a script for a supported language. If the first user input is a first character, the first character is stored in an input buffer. A plurality of words in the supported language that match a contents of the input buffer are identified, and a subset of the plurality of words are displayed to the user based on a frequency value associated with each of the plurality of words.
