# company announcement

#### Financial report for the period 1 January 2018 to 30 June 2018

8 August 2018

## Novo Nordisk's operating profit decreased by 8% in Danish kroner and increased by 4% in local currencies in the first six months of 2018

Sales decreased by 5% in Danish kroner and increased by 4% in local currencies to DKK 54.3 billion.

- Sales of Victoza<sup>®</sup> increased by 2% to DKK 11.7 billion (12% in local currencies).
   Sales of Saxenda<sup>®</sup> increased by 35% to DKK 1.7 billion (50% in local currencies).
- Sales of Tresiba® were unchanged at DKK 3.7 billion (increased by 11% in local currencies).
- Sales of Xultophy® increased by 154% to DKK 720 million (165% in local currencies).
- Sales in North America Operations decreased by 10% (unchanged in local currencies).
- Sales in International Operations increased by 1% (8% in local currencies).

Sales within diabetes care and obesity decreased by 4% to DKK 45.6 billion (increased by 5% in local currencies). Sales within biopharmaceuticals decreased by 9% to DKK 8.7 billion (decreased by 1% in local currencies).

Operating profit decreased by 8% in Danish kroner and increased by 4% in local currencies to DKK 24.7 billion, reflecting the significant depreciation of the US dollar and related currencies versus the Danish krone.

Net profit increased by 5% to DKK 21.1 billion. Diluted earnings per share increased by 7% to DKK 8.66.

In February 2018, Novo Nordisk launched Ozempic<sup>®</sup> in the USA, a new once-weekly GLP-1, and the initial feedback from prescribers and payers is positive and the formulary coverage for Ozempic<sup>®</sup> is progressing. The weekly new-tobrand prescription market share for Ozempic<sup>®</sup> has reached 14%.

During second guarter of 2018, Novo Nordisk announced the phase 3a results from four of the 10 clinical trials in the PIONEER programme with oral semaglutide, a new once-daily GLP-1 tablet for people with type 2 diabetes. The trials confirmed statistically significant reductions in both HbA1c and weight for oral semaglutide compared to empagliflozin, sitagliptin and Victoza®.

The Board of Directors has approved an interim dividend for 2018 of DKK 3.00 per share of DKK 0.20 to be paid in August 2018.

For 2018, sales growth is still expected to be 3-5% and operating profit growth is still expected to be 2-5%, both measured in local currencies. Sales growth and operating profit growth reported in Danish kroner are now expected to be 5 and 7 percentage points lower than in local currencies, respectively.

For 2019, formulary negotiations with pharmacy benefit managers and managed care organisations in the USA are progressing. Subject to the final outcome of these negotiations, average prices after rebates are expected to be lower compared with the levels in 2018, predominantly due to basal insulin pricing and changed Medicare Part D coverage gap legislation. The market access for Novo Nordisk's key products is expected to remain broadly unchanged compared to 2018.

Lars Fruergaard Jørgensen, president and CEO: "Sales growth in the first half of 2018 was driven by solid performance of our key innovative products: Victoza<sup>®</sup>, Tresiba<sup>®</sup>, Xultophy<sup>®</sup> and Saxenda<sup>®</sup>, and the launch of Ozempic<sup>®</sup> is off to a good start in North America. We are encouraged about the clinical trial results for oral semaglutide and we are looking forward to making the first oral GLP-1 treatment available for people with type 2 diabetes."

Company announcement No 60 / 2018

## **About Novo Nordisk**

Novo Nordisk is a global healthcare company with 95 years of innovation and leadership in diabetes care. This heritage has given us experience and capabilities that also enable us to help people defeat obesity, haemophilia, growth disorders and other serious chronic diseases. Headquartered in Denmark, Novo Nordisk employs approximately 43,100 people in 79 countries, and markets its products in more than 170 countries. Novo Nordisk's B shares are listed on Nasdaq Copenhagen (Novo-B). Its ADRs are listed on the New York Stock Exchange (NVO). For more information, visit novonordisk.com, Facebook, Twitter, LinkedIn, YouTube.

## **Conference call details**

On 8 August 2018 at 13.00 CEST, corresponding to 7.00 am EDT, a conference call will be held. Investors will be able to listen in via a link on <u>novonordisk.com</u>, which can be found under 'Investors'. Presentation material for the conference call will be available approximately one hour before on the same page.

#### Webcast details

On 9 August 2018 at 13.30 CEST, corresponding to 7.30 am EDT, management will give a presentation to institutional investors and sell-side analysts in London. A webcast of the presentation can be followed via a link on <u>novonordisk.com</u>, which can be found under 'Investors'. Presentation material for the webcast will be made available on the same page.

## FINANCIAL PERFORMANCE

#### **CONSOLIDATED FINANCIAL STATEMENT FOR THE FIRST SIX MONTHS OF 2018**

These unaudited consolidated financial statements for the first six months of 2018 have been prepared in accordance with IAS 34 'Interim Financial Reporting'. The accounting policies adopted in the preparation are consistent with those applied in the *Annual Report 2017* of Novo Nordisk, except for the adoption of new, amended or revised standards and interpretations ('IFRSs') as published by the IASB that are endorsed by the EU and effective as of 1 January 2018. This includes IFRS 9 'Financial Instruments' applied prospectively and IFRS 15 'Revenue from Contracts with Customers' applied on a modified retrospective basis, see appendix 8. Furthermore, the financial report including the consolidated financial statements for the first six months of 2018 and Management's review have been prepared in accordance with additional Danish disclosure requirements for interim reports of listed companies.

Amounts are in DKK million, except for number of shares, earnings per share and full-time equivalent employees.

Company announcement No 60 / 2018

## SALES DEVELOPMENT

Sales decreased by 5% measured in Danish kroner and increased by 4% in local currencies in the first six months of 2018, reflecting a significant impact from the depreciation of the US dollar and related currencies versus the Danish krone. Sales growth in local currencies was realised within diabetes care and obesity with the majority of growth originating from Victoza<sup>®</sup>, Tresiba<sup>®</sup>, Xultophy<sup>®</sup>and Saxenda<sup>®</sup>, partly offset by declining sales of Levemir<sup>®</sup>. Declining sales within biopharmaceuticals was driven by declining sales of NovoSeven<sup>®</sup> and 'Other biopharmaceuticals' partly offset by increased sales of NovoEight<sup>®</sup> and Norditropin<sup>®</sup>.

Sales split per therapy The diabetes care and obesity segment	Sales H1 2018 DKK million	Sales H1 2017 DKK million	Growth as reported	Growth in local currencies	Share of growth in local currencies
Long-acting insulin	10,230	11,582	(12%)	(3%)	(17%)
- Tresiba®	3,707	3,689	0%	11%	19%
- Xultophy®	720	284	154%	165%	22%
- Levemir®	5,803	7,609	(24%)	(16%)	(58%)
Premix insulin	5,229	5,565	(6%)	1%	3%

Other biopharmaceuticals <sup>3)</sup>	715	919	(22%)	(18%)	(7%)
Biopharmaceuticals total	8,696	9,559	(9%)	(1%)	(6%)
Total sales	54,337	57,090	(5%)	4%	100%

<sup>1)</sup> Primarily NovoNorm<sup>®</sup>, needles and GlucaGen<sup>®</sup> HypoKit<sup>®</sup>.

<sup>2)</sup> Comprises NovoSeven<sup>®</sup>, NovoEight<sup>®</sup>, NovoThirteen<sup>®</sup> and Refixia<sup>®</sup>.

<sup>3)</sup> Primarily Vagifem<sup>®</sup> and Activelle<sup>®</sup>.

International Operations was the main driver of the sales growth, and the growth contributors were Region AAMEO (Africa, Asia, Middle East and Oceania), Region Latin America, Region China and Region Europe, partly offset by Region Japan & Korea. Sales growth in Region Latin America of 46% measured in local currencies was positively impacted by 7 percentage points due to inflationary price effects in countries with high inflation.

Sales split per region	Sales H1 2018 DKK million	Growth as reported	Growth in local currencies	Share of growth in local currencies
North America Operations	26,955	(10%)	0%	1%
- USA	25,830	(11%)	0%	(6%)
International Operations	27,382	1%	8%	99%
- Region Europe	10,693	1%	2%	8%
- Region AAMEO	6,093	1%	15%	42%
- Region China	5,780	2%	6%	16%
- Region Japan & Korea	2,741	(10%)	(3%)	(4%)
- Region Latin America	2,075	19%	46%	37%
Total sales	54,337	(5%)	4%	100%

Please refer to appendix 6 for further details on sales in the first six months of 2018.

In the following sections, unless otherwise noted, market data are based on moving annual total (MAT) from May 2018 and May 2017 provided by the independent data provider IQVIA.

## **DIABETES CARE AND OBESITY, SALES DEVELOPMENT**

Sales of diabetes care and obesity products decreased by 4% measured in Danish kroner and increased by 5% in local currencies to DKK 45,641 million. Novo Nordisk is the world leader in diabetes care with a global value market share of 27%.

## Insulin

Sales of insulin decreased by 8% to DKK 29,874 million measured in Danish kroner and remained unchanged in local currencies. Measured in local currencies, sales growth was driven by International Operations, where all five regions apart from Region Japan & Korea contributed to growth, offset by lower sales in North America Operations. Novo Nordisk is the global leader with 46% of the total insulin market and 45% of the market for modern insulin and new-generation insulin, both measured in volume.

Sales of long-acting insulin (Tresiba<sup>®</sup>, Xultophy<sup>®</sup> and Levemir<sup>®</sup>) decreased by 12% measured in Danish kroner and 3% in local currencies to DKK 10,230 million.

Sales of Tresiba<sup>®</sup> (insulin degludec), the once-daily new-generation insulin, reached DKK 3,707 million compared with DKK 3,689 million in 2017. The roll-out of Tresiba<sup>®</sup> continues and the product has now been launched in 70 countries. Generally, Tresiba<sup>®</sup> has shown solid penetration in markets with reimbursement at a similar level to insulin glargine U100, whereas penetration remains modest in markets with restricted market access.

Sales of Xultophy<sup>®</sup>, a once-daily combination of insulin degludec (Tresiba<sup>®</sup>) and liraglutide (Victoza<sup>®</sup>), reached DKK 720 million compared with DKK 284 million in 2017. Sales growth was driven by both International Operations, where predominantly Region Europe contributed to growth, and North America Operations. Xultophy<sup>®</sup> has been launched in 22 countries.

Sales of premix insulin (Ryzodeg<sup>®</sup> and NovoMix<sup>®</sup>) decreased by 6% measured in Danish kroner and increased by 1% in local currencies to DKK 5,229 million.

Sales of Ryzodeg<sup>®</sup>, a soluble formulation of insulin degludec and insulin aspart, reached DKK 320 million compared with DKK 196 million in 2017. Ryzodeg<sup>®</sup> has been marketed in 20 countries, and feedback from patients and prescribers is encouraging.

Sales of fast-acting insulin (Fiasp<sup>®</sup> and NovoRapid<sup>®</sup>) decreased by 7% to DKK 9,714 million measured in Danish kroner and increased by 2% in local currencies.

Sales of Fiasp<sup>®</sup>, the novel mealtime fast-acting insulin aspart, were DKK 220 million. Fiasp<sup>®</sup> has now been launched in 18 countries.

Financial Performance	Outlook	R&D	Sustainability	Equity	Legal	Financial Information

Source: IQVIA, May 2018 data. \* Modern insulin and new-generation insulin comprises the following Novo Nordisk products: Levenir<sup>®</sup>, NovoMix<sup>®</sup>, NovoRapid<sup>®</sup>, Tresib<sup>®</sup>, Xultophy<sup>®</sup>, Ryzodeg<sup>®</sup> and Fiasp<sup>®</sup> \*\* Data available for 11 private markets representing approximately 70% of total Novo Nordisk's diabetes care sales in the region. \*\*\*\* Data for mainland China, excluding Hong Kong and Taiwan. \*\*\*\* Data available for three private markets representing approximately 70% of total Novo Nordisk's diabetes care sales in the region.

## North America Operations

Sales of insulin in North America Operations decreased by 17% in Danish kroner and by 7% in local currencies. The decline in sales in the USA in the basal insulin segment was mainly driven by lower realised prices for Levemir<sup>®</sup> and phasing of rebates in 2017 for Tresiba<sup>®</sup> partly offset by higher sales of Tresiba<sup>®</sup> following a net market share gain of approximately 3 percentage points in the basal insulin segment, underlying volume growth as well as increased sales of Xultophy<sup>®</sup> 100/3.6. The decline in sales decline in the USA in the short-acting insulin segment was driven by lower realised prices due to phasing of rebates in 2017 for NovoLog<sup>®</sup> partly offset by underlying volume growth.

## International Operations

Sales of insulin in International Operations remained unchanged in Danish kroner and increased by 7% in local currencies. Sales growth measured in local currencies was driven by modern and new-generation, long-acting, premix and fast-acting insulin, partly offset by declining human insulin sales.

## Region Europe

Sales of insulin in Region Europe increased by 1% in Danish kroner and by 2% in local currencies. Sales were driven by the penetration of Xultophy<sup>®</sup>, Fiasp<sup>®</sup> and Tresiba<sup>®</sup> across the region, partly offset by contracting Levemir<sup>®</sup> sales reflecting the continued roll-out of Tresiba<sup>®</sup>, as well as declining NovoMix<sup>®</sup> and human insulin sales.

## Region AAMEO

Sales of insulin in Region AAMEO increased by 2% in Danish kroner and by 16% in local currencies. The sales growth measured in local currencies was driven by growth of the overall diabetes care market and positive contribution from all three insulin segments: long-acting, premix and fast-acting as well as human insulin.

#### **Region China**

Sales of insulin in Region China increased by 1% in Danish kroner and by 5% in local currencies. The sales growth measured in local currencies was driven by continued growth in the three insulin segments: long-acting, premix and fast-acting, and Novo Nordisk has improved its market share in the long-acting insulin segment and broadly stabilised the modern insulin market share, partly offset by lower human insulin sales.

#### Region Japan & Korea

Sales of insulin in Region Japan & Korea decreased by 10% in Danish kroner and by 3% in local currencies. The decline in sales was driven by NovoMix<sup>®</sup> and NovoRapid<sup>®</sup>, as both products reached the 15-year price protection limit 1 April 2018 leading to significant mandatory price reductions, as well as lower human insulin sales, partly offset by positive contribution from market share gains for Ryzodeg<sup>®</sup> and Tresiba<sup>®</sup> in Japan.

## **Region Latin America**

Sales of insulin in Region Latin America decreased by 3% in Danish kroner and increased by 22% in local currencies. The sales growth measured in local currencies was driven by growth of the overall diabetes care market, inflationary price effects and positive volume contribution from all three insulin segments: long-acting, premix and fast-acting as well as human insulin.

### GLP-1 therapy for type 2 diabetes

Sales of GLP-1 therapy for type 2 diabetes (Victoza<sup>®</sup> and Ozempic<sup>®</sup>) increased by 4% in Danish kroner and by 14% in local currencies to DKK 11,982 million. Sales growth is predominantly driven by North America Operations comprising 77% share of the GLP-1 growth. The GLP-1 segment's value share of the total diabetes care market has increased to 13.0% compared with 10.7% 12 months ago. Victoza<sup>®</sup> continues to be the market leader in the GLP-1 segment with a 47% value market share.

GLP-1 MARKET SHARES (value, MAT) 	GLP-1 share of total diabetes care market		Victoza® share of GLP-1 market	
	May 2018	May 2017	May 2018	May 2017
Global	13.0%	10.7%	47%	53%
North America Operations	15.4%	12.6%	46%	52%
- USA	15.5%	12.7%	45%	51%
International Operations	7.1%	6.1%	54%	61%
- Region Europe	11.1%	10.0%	56%	61%
- Region AAMEO*	2.9%	2.5%	46%	51%
- Region China**	1.0%	0.9%	78%	61%
- Region Japan & Korea	5.2%	4.0%	36%	50%
- Region Latin America***	5.7%	4.9%	70%	83%

Source: IQVIA, May 2018 data MAT. \* Data for 11 selected private markets representing approximately 70% of Novo Nordisk's total diabetes care sales in the region. \*\* Data for mainland China, excluding Hong Kong and Taiwan. \*\*\* Data for three selected private markets representing approximately 70% of Novo Nordisk's total diabetes care sales in the region.

## North America Operations

Sales of Novo Nordisk's GLP-1 diabetes products (Victoza<sup>®</sup> and Ozempic<sup>®</sup>) in North America Operations increased by 3% in Danish kroner and increased by 15% in local currencies. Sales growth is driven by an underlying prescription volume growth of the GLP-1 class of more than 20%, and Novo Nordisk is the market leader with a 46% value market share. The value share of the GLP-1 class of the total North American diabetes care market has increased to 15.4%.

In February 2018, Novo Nordisk launched Ozempic<sup>®</sup> in the USA, a new once-weekly GLP-1, and the initial feedback from prescribers and payers is positive and the formulary coverage for Ozempic<sup>®</sup> is progressing well. The weekly new-to-brand prescription market share for Ozempic<sup>®</sup> has reached 14%. Sales of Victoza<sup>®</sup> remained unchanged in Danish kroner and increased by 11% in local currencies. Sales growth of Victoza<sup>®</sup> is driven by the positive impact from the updated label for Victoza<sup>®</sup> reflecting cardiovascular benefits, partly offset by rebate adjustments related to prior periods and an impact from the launch of Ozempic<sup>®</sup>.

## International Operations

Sales of Victoza<sup>®</sup> in International Operations increased by 8% in Danish kroner and by 13% in local currencies. Sales growth is driven by all regions. The value share of the GLP-1 class of the total International Operations diabetes care market has increased to 7.1% from 6.1% in 2017. Victoza<sup>®</sup> is the market leader with a 54% value market share.

#### **Region Europe**

Sales in Region Europe increased by 9% in both Danish kroner and in local currencies. The sales development reflects positive impact from the expanded CV label for Victoza<sup>®</sup> as well as competition from a once-weekly product. In Region Europe, the value share of the GLP-1 class of the total diabetes care market has increased to 11.1%. Victoza<sup>®</sup> remains the market leader in Region Europe with a 56% value market share.

Financial report for the period 1 January 2018 to 30 June 2018

Page 9 of 30

## Region AAMEO

Sales in Region AAMEO decreased by 5% in Danish kroner and increased by 8% in local currencies. Sales growth is primarily driven by a number of countries in the Middle East. The value share of the GLP-1 class of the total diabetes care market increased to 2.9%. Victoza<sup>®</sup> is the GLP-1 market leader across Region AAMEO with a value market share of 46%.

## **Region China**

Sales in Region China increased by 50% in Danish kroner and by 57% in local currencies. The increase in sales reflects the inclusion of Victoza<sup>®</sup> in the Chinese National Reimbursement Drug List in July 2017. In China, Victoza<sup>®</sup> has increased its GLP-1 value market share to 78%, however, the GLP-1 class only represents 1.0% of the total diabetes care market measured in value.

## Region Japan & Korea

Sales in Region Japan & Korea decreased by 1% in Danish kroner and increased by 6% in local currencies. The sales growth measured in local currencies reflects the continued expansion of the GLP-1 market in Japan, partly offset by intensified competition from a once-weekly product. In Region Japan & Korea, the GLP-1 class represents 5.2% of the total diabetes care market value compared with 4.0% in 2017. Victoza<sup>®</sup> holds a value market share of 36%.

## **Region Latin America**

Sales in Region Latin America increased by 8% in Danish kroner and by 30% in local currencies. The sales growth reflects the continued expansion of the GLP-1 markets across the region. In Region Latin America, the GLP-1 class represents 5.7% of the total diabetes care market value compared with 4.9% in 2017. Victoza<sup>®</sup> remains the leader in the class with a value market share of 70%.

## Other diabetes care

Sales of other diabetes care products, predominantly consisting of oral antidiabetic products, needles and GlucaGen<sup>®</sup>HypoKit<sup>®</sup>, declined by 5% to DKK 2,132 million and increased by 2% in local currencies. Increasing sales measured in local currencies were both seen in North America Operations and in International Operations, where Region Latin America and Region China contributed to sales growth.

## Saxenda<sup>®</sup> (obesity)

Sales of Saxenda<sup>®</sup>, liraglutide 3 mg for weight management, increased by 35% in Danish kroner and by 50% in local currencies to DKK 1,653 million. Sales growth was driven by both North America Operations and International Operations, where Region AAMEO, Region Latin America and Region Europe contributed to growth. Saxenda<sup>®</sup> was launched in May 2015 in the USA and has obtained broad commercial formulary market access, but generally with prior authorisation requirements. Saxenda<sup>®</sup> has now been launched in 30 countries.

## **BIOPHARMACEUTICALS, SALES DEVELOPMENT**

Sales of biopharmaceutical products decreased by 9% measured in Danish kroner and by 1% in local currencies to DKK 8,696 million. Decreasing sales were realised in North America Operations, partly offset by increased sales in International Operations.

## Haemophilia

Sales of haemophilia products decreased by 10% measured in Danish kroner and by 2% in local currencies to DKK 4,797 million. The sales decrease was primarily driven by lower NovoSeven<sup>®</sup> sales in the USA and Region Europe reflecting increased competition from a recently introduced product as well as increased clinical trial activity from competing products, partly offset by increased NovoSeven<sup>®</sup> sales in Region Latin America due to timing of tender deliveries. Furthermore, sales of NovoEight<sup>®</sup> in Region Europe and Region AAMEO contributed positively to the sales development.

## Growth disorders (Norditropin®)

Sales of growth disorder products decreased by 4% to DKK 3,184 million measured in Danish kroner and increased by 5% in local currencies. The sales development measured in local currencies was driven by positive contribution from North America Operations driven by higher realised prices in the USA, offset by declining sales in International Operations predominantly Region Europe and Region Japan & Korea. Novo Nordisk is the leading company in the global human growth disorder market with a 27% market share measured in volume.

## Other biopharmaceuticals

Sales of other products within biopharmaceuticals, which predominantly consist of hormone replacement therapyrelated (HRT) products, declined by 22% measured in Danish kroner and by 18% in local currencies to DKK 715 million, primarily reflecting an effect from the launch of a generic version of Vagifem<sup>®</sup> in the USA.

## **DEVELOPMENT IN COSTS AND OPERATING PROFIT**

The cost of goods sold declined by 1% at DKK 8,549 million, resulting in a gross margin of 84.3% measured in Danish kroner, compared with 84.8% in 2017. The decline in gross margin reflects a negative currency impact of 1.0 percentage point. The gross margin was positively impacted by improved productivity and positive contribution from product mix due to higher Victoza<sup>®</sup>, Tresiba<sup>®</sup> and Saxenda<sup>®</sup> sales, but partly countered by lower contribution from NovoSeven<sup>®</sup>. The gross margin was negatively impacted by lower prices primarily related to the basal insulin segment in the USA.

Sales and distribution costs remained unchanged in Danish kroner and increased by 8% in local currencies to DKK 13,541 million. The increase in sales and distribution costs reflects higher promotional activities in both North America Operations and International Operations to support Victoza<sup>®</sup> and Saxenda<sup>®</sup> as well as launch activities for Ozempic<sup>®</sup> in the USA, partly offset by lower costs for legal cases.

Research and development costs declined by 1% in Danish kroner and increased by 2% in local currencies to DKK 6,617 million, reflecting higher costs for both research and development. The increase in research costs was driven by increased costs for the diabetes care and obesity portfolio. The increase in development costs was predominantly driven by injectable semaglutide in obesity and the phase 3b SUSTAIN programme for Ozempic<sup>®</sup>.

Administration costs declined by 3% in Danish kroner and increased by 2% in local currencies to DKK 1,715 million.

Other operating income (net) was DKK 737 million compared with DKK 467 million in 2017. In the first six months of 2018, Novo Nordisk received a milestone payment from a partner related to an out-licensed clinical asset and Novo Nordisk recorded a net gain of DKK 122 million following the disposal of 2 million shares in NNIT to Novo Holdings A/S.

Operating profit decreased by 8% in Danish kroner and increased by 4% in local currencies to DKK 24,652 million.

## **FINANCIAL ITEMS (NET)**

Financial items (net) showed a net gain of DKK 1,455 million compared with a net loss of DKK 1,229 million in 2017.

In line with Novo Nordisk's treasury policy, the most significant foreign exchange risks for the Group have been hedged, primarily through foreign exchange forward contracts. The foreign exchange result was a gain of DKK 1,495 million compared with a loss of DKK 1,161 million in 2017. This development reflects a gain on foreign exchange hedging involving especially the US dollar versus the Danish krone, partly offset by a net loss from non-hedged currencies.

A negative market value of financials contracts as per the end of June 2018 of approximately DKK 1.3 billion has been deferred for recognition later in 2018 and 2019.

## **CAPITAL EXPENDITURE AND FREE CASH FLOW**

Net capital expenditure for property, plant and equipment was DKK 3.9 billion compared with DKK 3.5 billion in 2017. Net capital expenditure was primarily related to investments in a new production facility for a range of diabetes active pharmaceutical ingredients in Clayton, North Carolina, USA, a new diabetes care filling capacity in Hillerød, Denmark and an expansion of the manufacturing capacity for biopharmaceutical products in Kalundborg, Denmark.

Free cash flow was DKK 20.5 billion compared with DKK 18.8 billion in 2017. The increase of 9% compared with 2017 primarily reflects the timing of rebate payments in the USA and higher net profit partly offset by increased capital expenditure and increased investment in intangible assets reflecting an acquisition of a priority review voucher for Novo Nordisk diabetes care and obesity development portfolio.

## **KEY DEVELOPMENTS IN THE SECOND QUARTER OF 2018**

Please refer to appendix 1 for an overview of the quarterly numbers in DKK and to appendix 6 for details on sales in the second quarter of 2018.

Sales in the second quarter of 2018 decreased by 4% in Danish kroner and increased by 2% in local currencies compared with the same period in 2017. The growth was driven by Victoza<sup>®</sup>, Ozempic<sup>®</sup>, Xultophy<sup>®</sup> and Saxenda<sup>®</sup>, partly offset by Levemir<sup>®</sup> and NovoSeven<sup>®</sup>. From a geographic perspective, sales growth in local currencies was driven by International Operations growing 8%, partly offset by North America Operations declining 3%. The sales development in the USA was negatively impacted by rebate adjustments related to prior periods for Victoza<sup>®</sup> in second quarter of 2018 and rebate adjustments in 2017 for Tresiba<sup>®</sup> and NovoLog<sup>®</sup>.

The gross margin was 84.1% in the second quarter of 2018 compared with 84.6% in the same period last year. The decline of 0.5 percentage point of the gross margin reflects a negative currency impact of 1.4 percentage points. The gross margin was positively impacted by improved productivity and positive contribution from product mix due to higher Victoza<sup>®</sup>, Tresiba<sup>®</sup>, Saxenda<sup>®</sup> and Ozempic<sup>®</sup> sales, partly countered by lower contribution from NovoSeven<sup>®</sup>. The gross margin was negatively impacted by lower prices primarily within the basal insulin segment in the USA.

Sales and distribution costs increased by 5% in Danish kroner and by 12% in local currencies compared with the same period in 2017 reflecting higher costs in both operating units. In North America Operations, the increase in costs reflected promotional activities for the launch of Ozempic<sup>®</sup> as well as Saxenda<sup>®</sup> promotion. In International Operations, growth in costs was mainly in Region AAMEO and in Region China.

Research and development costs decreased by 3% in Danish kroner and by 1% in local currencies compared with the same period in 2017. The decrease in research and development costs reflects the high level of research costs in second quarter of 2017 following impairment of early-stage diabetes and obesity assets. There was an underlying increase in development costs driven by injectable semaglutide in obesity and the preparation for the phase 2 initiation of once-weekly insulin LAI287, partly offset by lower costs for oral semaglutide due to the finalisation of the PIONEER trials.

Administrative costs decreased by 1% in Danish kroner and increased by 3% in local currencies compared with the same period in 2017 mainly related to higher spend across the regions.

Other operating income (net) was DKK 386 million in the second quarter of 2018 compared with DKK 189 million in the same period last year. In second quarter of 2018, Novo Nordisk received a milestone payment from a partner related to an out-licensed clinical asset.

Operating profit decreased by 9% in Danish kroner and increased by 2% in local currencies compared with the same period in 2017.

Company announcement No 60 / 2018

## OUTLOOK

## OUTLOOK 2018

The current expectations for 2018 are summarised in the table below:

Expectations are as reported, if not otherwise stated	Expectations 8 August 2018	Expectations 2 May 2018
Sales growth in local currencies	3% to 5%	3% to 5%
as reported	Around 5 percentage points lower than in local currencies	Around 6 percentage points lower than in local currencies
Operating profit growth		
in local currencies	2% to 5%	2% to 5%
as reported	Around 7 percentage points lower than in local currencies	Around 9 percentage points lower than in local currencies
Financial items (net)	Gain of around DKK 0.9 billion	Gain of around DKK 1.9 billion
Effective tax rate	19% to 20%	20% to 22%
Capital expenditure	Around DKK 9.5 billion	Around DKK 9.5 billion
Depreciation, amortisation and impairment losses	Around DKK 3 billion	Around DKK 3 billion
Free cash flow	DKK 27-32 billion	DKK 27-32 billion

For 2018, **sales growth** is expected to be 3% to 5%, measured in local currencies. This guidance reflects expectations for robust performance for the portfolio of new-generation insulin and the GLP-1-based products Victoza<sup>®</sup>, Ozempic<sup>®</sup> and Saxenda<sup>®</sup>. Sales growth is expected to be partly countered by intensifying global competition both within diabetes care and biopharmaceuticals, especially within the haemophilia inhibitor segment, as well as continued pricing pressure within diabetes care, especially in the USA. Overall, the expectations are based on an assumption of a broadly unchanged global macroeconomic environment. Given the current exchange rates versus the Danish krone, growth reported in DKK is now expected to be around 5 percentage points lower than in local currencies.

For 2019, formulary negotiations with pharmacy benefit managers and managed care organisations in the USA are progressing. Subject to the final outcome of these negotiations, average prices after rebates are expected to be lower compared with the levels in 2018, predominantly due to basal insulin pricing and changed Medicare Part D coverage gap legislation. The market access for Novo Nordisk's key products is expected to remain broadly unchanged compared to 2018.

For 2018, **operating profit growth** is expected to be 2% to 5%, measured in local currencies. The expectation for operating profit growth primarily reflects the sales growth outlook and continued focus on cost control. The outlook also reflects a planned increase in the sales and distribution costs to support the commercialisation efforts for Ozempic<sup>®</sup>. Given the current exchange rates versus the Danish krone, growth reported in DKK is now expected to be around 7 percentage points lower than in local currencies.

For 2018, Novo Nordisk now expects **financial items (net)** to amount to a gain of around DKK 0.9 billion, partly offsetting the negative currency impact on operating profit. The current expectation for 2018 reflects gains associated with foreign exchange hedging contracts, mainly related to the US dollar and Japanese yen versus the Danish krone, partly offset by losses on non-hedged currencies. The expectation for financial items (net) reflects that net losses of DKK 0.7 billion in relation to foreign exchange hedging contracts as per 2 August 2018 are expected to be income recognised later in 2018.

The **effective tax rate** for 2018 is now expected to be in the range of 19-20%. The lower effective tax rate reflects a non-recurring change in tax provisions related to settlement of international tax cases covering multiple years. Furthermore, the effective tax rate in 2018 is positively impacted by the reduced federal corporate tax rate in the USA.

**Capital expenditure** is expected to be around DKK 9.5 billion in 2018, primarily related to investments in additional capacity for active pharmaceutical ingredient production within diabetes care and an expansion of the diabetes care filling capacity. **Depreciation, amortisation and impairment losses** are expected to be around DKK 3 billion. **Free cash flow** is expected to be DKK 27-32 billion.

All of the above expectations are based on assumptions that the global economic and political environment will not significantly change business conditions for Novo Nordisk during 2018, and that currency exchange rates, especially the US dollar, will remain at the current level versus the Danish krone. Please refer to appendix 7 for key currency assumptions.

Novo Nordisk has hedged expected net cash flows in a number of invoicing currencies and, all other things being equal, movements in key invoicing currencies will impact Novo Nordisk's operating profit as outlined in the table below.

Key invoicing currencies	Impact on Novo Nordisk's operating profit in the next 12 months of a 5% immediate movement in currency	Hedging period (months)	
USD	DKK 2,000 million	11	
CNY	DKK 330 million	6*	
JPY	DKK 180 million	12	
GBP	DKK 95 million	11	
CAD	DKK 80 million	10	

\* Chinese yuan traded offshore (CNH) used as proxy when hedging Novo Nordisk's CNY currency exposure

The financial impact from foreign exchange hedging is included in Financial items (net).

#### **RESEARCH & DEVELOPMENT UPDATE**

## DIABETES

## Ozempic® (NN9535) label updated in the EU to reflect updated device offering

In May 2018, Novo Nordisk received an approval from the European Medicines Agency (EMA) to update the label for Ozempic<sup>®</sup> to reflect the updated device offering in the EU. Following the positive opinion, Ozempic<sup>®</sup> will be available in three pens; the titration dosage, 0.25 mg and the therapeutic dosages, 0.5 mg and 1 mg, and will be launched in the Ozempic<sup>®</sup> FlexTouch<sup>®</sup> pen, the latest generation of Novo Nordisk prefilled devices.

#### Approval of updated Xultophy® (NN9068) label in the EU based on LEADER and DEVOTE

In June 2018, the EU Commission approved the proposed update of the Xultophy<sup>®</sup> EU label to include data from the LEADER and DEVOTE trials. The LEADER trial was a multi-centre, international, randomised, double-blinded, placebocontrolled trial investigating the long-term (3.5-5 years) effects of Victoza<sup>®</sup> (liraglutide up to 1.8 mg) compared to placebo, both in addition to standard of care, in people with type 2 diabetes at high risk of major cardiovascular events. The DEVOTE trial, a long-term, randomised, double-blinded event-driven trial, was conducted to confirm the cardiovascular safety of Tresiba<sup>®</sup> (insulin degludec U100) compared to insulin glargine U100 when added to standard of care, in people with type 2 diabetes at high risk of cardiovascular events.

# Additional four clinical trials successfully completed with oral semaglutide (NN9924) in the phase 3a programme PIONEER

In May and June 2018, Novo Nordisk announced the headline results from PIONEER 2, 3, 4 and 7, the phase 3a trials with oral semaglutide for treatment of adults with type 2 diabetes. Oral semaglutide is a new GLP-1 analogue taken once daily as a tablet.

Two distinct statistical approaches to evaluating the effects of oral semaglutide were applied in all the PIONEER trials; a primary statistical approach required by recent regulatory guidance, evaluating the effect regardless of discontinuation of treatment and use of rescue medication, and a secondary statistical approach describing the effect while on treatment and without use of rescue medication.

## PIONEER 2: oral semaglutide compared with empagliflozin

PIONEER 2 was a 52-week, open label trial investigating the efficacy and safety of 14 mg oral semaglutide compared with 25 mg empagliflozin in 816 people with type 2 diabetes, inadequately controlled on metformin. The confirmatory endpoints were defined after 26 weeks of treatment.

The trial achieved its primary objective according to the primary statistical approach by demonstrating a statistically significant and superior improvement in  $HbA_{1c}$  with oral semaglutide compared to empagliflozin at 26 weeks. Difference in weight loss at 26 weeks between oral semaglutide and empagliflozin was not statistically significant when applying the primary statistical approach.

When applying the secondary statistical approach, people treated with 14 mg oral semaglutide achieved a statistically significant improvement in HbA<sub>1c</sub> of 1.4% at 26 weeks and 1.3% at 52 weeks, compared to an improvement in HbA<sub>1c</sub> of 0.9% and 0.8% with 25 mg empagliflozin at 26 and 52 weeks, respectively. The 14 mg dose of oral semaglutide demonstrated weight loss of 4.2 kg at 26 weeks and 4.7 kg at 52 weeks versus 3.8 kg with 25 mg empagliflozin at both 26 weeks and 52 weeks. The increased weight loss with oral semaglutide was statistically significant compared to empagliflozin at the 52-week time point.

In addition, applying the secondary statistical approach, the American Diabetes Association (ADA) treatment target of HbA<sub>1c</sub> below 7.0% was achieved by 72% of people treated with 14 mg oral semaglutide compared with 47% of people treated with 25 mg empagliflozin at 52 weeks.

In the trial, oral semaglutide was well-tolerated and with a profile consistent with GLP-1-based therapy. The most common adverse event for oral semaglutide was mild to moderate nausea, which diminished over time. In PIONEER 2, 20% of people treated with oral semaglutide experienced nausea during the trial. The proportion of people who discontinued treatment due to adverse events was 11% for people treated with 14 mg oral semaglutide compared to 4% for people treated with 25 mg empagliflozin.

#### PIONEER 3: oral semaglutide compared with sitagliptin

PIONEER 3 was a 78-week trial investigating the efficacy and long-term safety of 3, 7 and 14 mg oral semaglutide compared with 100 mg sitagliptin in 1,864 people with type 2 diabetes inadequately controlled with metformin, with or without sulfonylurea. The confirmatory endpoints were assessed after 26 weeks of treatment.

The trial achieved its primary objective according to the primary statistical approach by demonstrating statistically significant and superior reductions in HbA<sub>1c</sub> with oral semaglutide 7 and 14 mg compared to sitagliptin at week 26. Furthermore, people treated with oral semaglutide 7 and 14 mg achieved statistically significant and superior reductions in body weight compared to sitagliptin at week 26.

When applying the secondary statistical approach for week 26 and week 78, respectively, people treated with 7 and 14 mg oral semaglutide experienced statistically significantly greater reductions in HbA<sub>1c</sub> of 1.1% and 0.7% with 7 mg oral semaglutide, 1.4% and 1.1% with 14 mg oral semaglutide compared to 0.8% and 0.4% with sitagliptin. Reductions in HbA<sub>1c</sub> with 3 mg oral semaglutide at 26 and 78 weeks were 0.5% and 0.3%, respectively. The reduction was statistically significantly less than sitagliptin at week 26, but was not statistically different at week 78. Reductions in body weight from baseline were statistically significantly greater with 3, 7 and 14 mg oral semaglutide at week 26 and 78, respectively, with reductions of 1.2 and 1.9 kg for 3 mg oral semaglutide, 2.2 and 2.7 kg for 7 mg oral semaglutide and 3.3 and 3.5 kg for 14 mg oral semaglutide compared to 0.7 and 1.1 kg with sitagliptin.

In this 78-week trial, oral semaglutide was well-tolerated and with a profile consistent with GLP-1-based therapy. The most common adverse event for oral semaglutide was mild to moderate nausea, which diminished over time. In PIONEER 3, 7-15% of people treated with oral semaglutide experienced nausea, compared to 7% of people treated with sitagliptin. The proportion of people who discontinued treatment due to adverse events was 6-12% for people treated with oral semaglutide compared to 5% with sitagliptin.

#### PIONEER 4: oral semaglutide compared with Victoza®

PIONEER 4 was a 52-week double-blinded, double-dummy trial investigating the efficacy and safety of 14 mg oral semaglutide compared with Victoza<sup>®</sup> 1.8 mg and placebo in 711 people with type 2 diabetes inadequately controlled on metformin, with or without an SGLT-2 inhibitor.

PIONEER 4 achieved its primary objective according to the primary statistical approach by demonstrating a noninferior reduction in HbA<sub>1c</sub> and statistically significant and superior weight loss at 26 weeks with oral semaglutide compared to Victoza<sup>®</sup>. Furthermore, oral semaglutide provided statistically significant and superior reductions in HbA<sub>1c</sub> and weight compared to placebo.

When applying the secondary statistical approach for week 26 and week 52, respectively, people treated with oral semaglutide experienced a reduction in HbA<sub>1c</sub> of 1.3% and 1.2% compared to 1.1% and 0.9% with Victoza<sup>®</sup> whereas placebo declined by 0.1% and increased by 0.2%. Reductions in HbA<sub>1c</sub> were statistically significantly greater with oral semaglutide compared to both Victoza<sup>®</sup> and placebo. Reduction in body weight from baseline was statistically significantly greater with oral semaglutide at 4.7 and 5.0 kg at 26 and 52 weeks, respectively, compared to 3.2 and 3.1 kg with Victoza<sup>®</sup>, and 0.7 and 1.2 kg with placebo. The American Diabetes Association (ADA) treatment target of HbA<sub>1c</sub> below 7.0% was achieved by 69% of people treated with oral semaglutide, 63% of people treated with Victoza<sup>®</sup> and 18% of people treated with placebo after 52 weeks; the difference between oral semaglutide and placebo was statistically significant.

In the trial, oral semaglutide was well-tolerated and with a profile consistent with GLP-1-based therapy. The most common adverse event for oral semaglutide was mild to moderate nausea which diminished over time. In PIONEER 4, 20% of people treated with oral semaglutide experienced nausea, compared to 18% of people treated with Victoza<sup>®</sup> and 4% of people treated with placebo. The proportion of people who discontinued treatment due to adverse events was 11% for people treated with oral semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated of the semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated with oral semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated of the semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated with oral semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated with oral semaglutide compared to 9% for people treated with Victoza<sup>®</sup> and 4% for people treated with Victoza<sup>®</sup> a

#### PIONEER 7: oral semaglutide compared with sitagliptin in a flexible dose setting

PIONEER 7 was a 52-week open-label trial investigating the efficacy and safety of oral semaglutide with dose adjustment based on clinical evaluation of glycaemic control and drug tolerability compared with the DPP-IV inhibitor 100 mg sitagliptin in 504 people with type 2 diabetes, inadequately controlled on 1-2 oral antidiabetics.

The trial achieved its primary objective according to the primary statistical principle by demonstrating that oral semaglutide was statistically significant and superior to sitagliptin 100 mg in the proportion of people achieving the American Diabetes Association (ADA) treatment target of HbA<sub>1c</sub> below 7% at week 52. Oral semaglutide also demonstrated statistically significant and superior reductions in body weight versus sitagliptin.

When applying the secondary statistical approach, people treated with oral semaglutide experienced a statistically significant reduction in HbA<sub>1c</sub> of 1.4% compared to 0.7% with sitagliptin at week 52. From a baseline HbA<sub>1c</sub> of 8.3%, 63% of people treated with oral semaglutide achieved the target HbA<sub>1c</sub> below 7% after 52 weeks of treatment compared to 28% of people treated with sitagliptin, and the difference was statistically significant. The reduction in body weight of 2.9 kg with oral semaglutide was statistically significantly greater at week 52 compared to 0.8 kg with sitagliptin. After 52 weeks of treatment, approximately 9% of the people receiving oral semaglutide treatment were receiving 3 mg oral semaglutide, while approximately 31% and 60% were receiving 7 mg and 14 mg oral semaglutide, respectively.

In the trial, oral semaglutide was well-tolerated and with a profile consistent with GLP-1-based therapy. The most common adverse event for oral semaglutide was mild to moderate nausea, which diminished over time. In PIONEER 7, 21% of people treated with oral semaglutide experienced nausea, compared to 2% of people treated with sitagliptin. The proportion of people who discontinued treatment due to adverse events was 9% for people treated with oral semaglutide compared to 3% for people treated with sitagliptin.

# Novo Nordisk updates its CVOT plans for Ozempic<sup>®</sup> (NN9535) and oral semaglutide (NN9924) following dialogue with FDA

Following the US FDA's (Food and Drug Administration) approval of Ozempic<sup>®</sup> in December 2017, Novo Nordisk has engaged in a constructive dialogue with the FDA focusing on minimising the need for additional large cardiovascular outcomes trials (CVOTs) to obtain a cardiovascular (CV) indication for Ozempic<sup>®</sup>, as well as the overall number of large cardiovascular outcomes trials necessary for the semaglutide molecule in different formulations. At this point in time, Novo Nordisk has agreed with FDA that a bridging strategy between Ozempic<sup>®</sup> and oral semaglutide could be utilised to pursue a CV indication. The originally planned CVOT (SOUL) for Ozempic<sup>®</sup> is expected to be replaced by a new CVOT with oral semaglutide to pursue a CV indication for both products. This study is expected to be initiated in 2019. A potential alternative scenario that Novo Nordisk is evaluating is the possibility to obtain a CV indication for Ozempic<sup>®</sup> based on the already obtained clinical data from the CVOT SUSTAIN 6 in combination with the CVOT trial PIONEER 6 with oral semaglutide, which is expected to be reported before the end of 2018.

# Phase 3b trial Ellipse with Victoza<sup>®</sup> (NN2211) in children and adolescents (10-17 years) successfully completed

In August 2018, Novo Nordisk completed the Ellipse trial with Victoza<sup>®</sup> in children and adolescents (10-17 years) with type 2 diabetes. This two-arm trial investigated the efficacy and safety of the maximum tolerated or required dose of Victoza<sup>®</sup> (0.6, 1.2 or 1.8 mg) compared to placebo when added to metformin, with or without basal insulin. The trial was randomised and double-blinded until week 26 and continued with an open-label extension until week 52.

The trial successfully met its primary objective of demonstrating superiority of Victoza<sup>®</sup> over placebo in lowering HbA<sub>1c</sub> after 26 weeks. From a mean baseline HbA<sub>1c</sub> of 7.8%, people treated with Victoza<sup>®</sup> experienced a reduction in HbA<sub>1c</sub> of 0.6% while people treated with placebo experienced an increase of 0.4%. Reductions in HbA<sub>1c</sub> were statistically significantly greater with Victoza<sup>®</sup> compared to placebo at week 26. The treatment difference in HbA<sub>1c</sub> was 1.3% after 52 weeks and confirmed the sustained glycaemic control with Victoza<sup>®</sup>. The safety profile of Victoza<sup>®</sup> was comparable to that observed in the adult population treated with Victoza<sup>®</sup>.

Novo Nordisk plans to submit the results from the Ellipse trial to the FDA in the USA and the EMA in the EU in fourth quarter of 2018 to seek label expansion and six months patent extension related to the paediatric data in the USA and the EU.

# Phase 3b trial LIRA-ADD2SGLT2i with Victoza® (NN2211) as add-on to any SGLT2 inhibitor successfully completed

In June 2018, Novo Nordisk completed the LIRA-ADD2SGLT2i trial with Victoza<sup>®</sup>. The trial investigated the effect of liraglutide 1.8 mg versus placebo as add-on to any SGLT2 inhibitor on glycaemic control in people with type 2 diabetes insufficiently controlled despite stable treatment with SGLT2 inhibitor with or without metformin for at least 90 days. The trial successfully met the primary endpoint and fulfilled its primary objective of demonstrating that treatment with liraglutide was superior with regards to lowering of HbA<sub>1c</sub> with a treatment difference of -0.7%

Financial Performance	Outlook	R&D	Sustainability	Equity	Legal	Financial Information
						ement No 60 / 2018

versus placebo. Treatment with liraglutide resulted in a weight loss of 2.8 kg compared to a weight loss of 2.0 kg with placebo, with no statistically significant difference between groups. Liraglutide was well-tolerated and with a profile consistent with GLP-1-based therapy.

## OBESITY

# Four clinical phase 3a trials initiated with injectable semaglutide (NN9536) in people with obesity in the STEP programme

During second quarter of 2018 and in August 2018, Novo Nordisk initiated the STEP programme with injectable semaglutide 2.4 mg for people with obesity. Four trials were initiated under the STEP programme and approximately 4,500 people with obesity are expected to be enrolled. All four trials have a duration of 68 weeks and the STEP programme is expected to be completed in 2020.

#### Obesity portfolio review leads to discontinuation of FGF-21 (NN9499) and G530L (NN9030)

Novo Nordisk has conducted a review of its obesity portfolio and based on this review, it was concluded to discontinue two projects currently in phase 1 clinical development, FGF-21 and G530L. Novo Nordisk intends to pursue clinical development of FGF-21 in other serious chronic diseases. The decision to discontinue these projects was made in order to balance the investments in Novo Nordisk's obesity projects. The projects were not discontinued due to any major safety issues.

## BIOPHARMACEUTICALS

## Refixia® (NN7999) approved in Japan

In July 2018, Refixia<sup>®</sup> was approved in Japan for suppression of bleeding tendency in people with blood coagulation factor IX deficiency. The label includes use in all ages for routine prophylaxis, surgery and treatment of bleeds. As a next step, prior to commercial launch, the list price will be negotiated with the Japanese authorities.

# Positive results from phase 2 trial with long-acting growth hormone somapacitan (NN8640) for treatment of Growth Hormone Deficiency (GHD).

In May 2018, Novo Nordisk completed the main phase of REAL 3, the phase 2 trial with long-acting recombinant growth hormone, somapacitan. REAL 3 was a multinational, randomised, parallel-group active-controlled trial with the primary endpoint to evaluate the efficacy of multiple dose regimens of once-weekly somapacitan after 26 weeks of treatment in 59 growth hormone treatment-naïve pre-pubertal children with growth hormone deficiency, compared to daily Norditropin<sup>®</sup> administration. The trial demonstrated dose dependency with no statistically significant difference in height velocity between somapacitan and daily growth hormone at the two upper doses of somapacitan. The mean annualised height velocity for the three dose levels of somapacitan was 8.0 cm, 10.9 cm and 12.9 cm, respectively, as compared to 11.4 cm for daily Norditropin<sup>®</sup>. The observed safety profile in the study was consistent with that known for Norditropin<sup>®</sup>. Novo Nordisk is now preparing for the pivotal phase 3 somapacitan programmes in GHD children as well as in children born small for gestational age (SGA), based on the dose direction obtained from the REAL 3 trial.

In July 2018, the Committee for Orphan Medicinal Products (COMP) Europe issued a positive opinion on the application for orphan drug designation for somapacitan for the treatment of growth hormone deficiency.

#### SUSTAINABILITY UPDATE

#### The number of employees in Novo Nordisk increased by 4%

The number of full-time employees at the end of the first six months of 2018 increased by 4% compared to 12 months ago. The total number of employees was 43,642, corresponding to 43,105 full-time positions. The growth in employees was mainly driven by the continued expansion of the global service centre in Bangalore, India, as well as increases in Region AAMEO, Product Supply and Research & Development.

#### Novo Nordisk secures renewable power for its production sites in Europe

In July 2018, Novo Nordisk signed a long-term power purchase agreement with the energy company Vattenfall, which will secure supplies of renewable power for all Novo Nordisk's production sites in Europe. With this agreement, Novo Nordisk has made an important step towards reaching its ambition that all Novo Nordisk production facilities worldwide will run on renewable power by 2020. Novo Nordisk will source power consumption

Financial report for the period 1 January 2018 to 30 June 2018

Page 18 of 30

from the offshore wind farm Kriegers Flak in the Baltic Sea, which will be Denmark's largest wind farm. The agreement is effective as of 1 January 2020.

#### EQUITY

Total equity was DKK 49,081 million at the end of the first six months of 2018, equivalent to 47.5% of total assets, compared with 49.5% at the end of the first six months of 2017. Please refer to appendix 5 for further elaboration of changes in equity.

#### Interim dividend

The Board of Directors has decided to pay out interim dividend for 2018 of DKK 3.00 for each Novo Nordisk A and B share of DKK 0.20, which will be paid in August 2018. The ex-dividend date for the interim dividend will be 17 August 2018. The record date will be 20 August 2018 for the A and B shares as well as ADRs. The payment date for the A and B shares will be 21 August 2018, while the payment date for the ADRs will be 28 August 2018. No dividend will be paid on the company's holding of B shares.

## 2018 share repurchase programme

On 4 May 2018, Novo Nordisk announced a share repurchase programme of up to DKK 2.7 billion to be executed from 7 May to 6 August 2018, as part of an overall programme February 2018 to January 2019 of up to DKK 14 billion to be executed during a 12-month period. The purpose of the programme was to reduce the company's share capital and to meet obligations arising from share-based incentive programmes. Under the programme, Novo Nordisk has repurchased 8,855,013 B shares for an amount of DKK 2.7 billion in the period from 7 May to 6 August 2018. The programme was concluded on 6 August 2018. As of 6 August 2018, Novo Nordisk A/S has repurchased a total of 23,626,435 B shares equal to a transaction value of DKK 7.2 billion under the DKK 14 billion programme beginning 1 February 2018.

As of 6 August 2018, Novo Nordisk A/S and its wholly-owned affiliates owned 33,598,106 of its own B shares, corresponding to 1.4% of the total share capital.

Share repurchase under the overall programme of up to DKK 14 billion in the period February 2018 to January 2019 is expected to be resumed shortly. As announced in February 2018, Novo Nordisk's majority shareholder Novo Holdings A/S, a holding company fully owned by the Novo Nordisk Foundation, has informed Novo Nordisk that it intends to consider its participation in the Novo Nordisk share repurchase programme on a year-by-year basis. For 2018, Novo Holdings A/S has informed Novo Nordisk that it plans to participate in the share repurchase programme. Novo Holdings A/S has an ownership of 28.4% of the Novo Nordisk share capital after the implementation of the share capital decrease and Novo Holdings A/S currently intends to maintain its ownership of the Novo Nordisk share capital around 28%.

## **LEGAL MATTERS**

#### Product liability lawsuits related to Victoza®

Novo Nordisk, along with the majority of incretin-based product manufacturers in the USA, is a defendant in product liability lawsuits related to use of incretin-based medications. As of 6 August 2018, 267 plaintiffs have named Novo Nordisk in product liability lawsuits, predominantly claiming damages for pancreatic cancer that allegedly developed as a result of using Victoza<sup>®</sup> and other GLP-1/DPP-IV (incretin-based) products. 172 of the Novo Nordisk plaintiffs have also named other defendants in their lawsuits. Most Novo Nordisk plaintiffs have filed suit in California federal and state courts.

In November 2015, all cases pending in the California federal and state courts were dismissed on Federal preemption grounds. Plaintiffs subsequently appealed these rulings to the Federal and California state appeals courts. In November 2017, the U.S. Court of Appeals for the Ninth Circuit reversed and vacated the Federal District Court Judge's ruling, thereby reinstating the dismissed federal lawsuits and sending them back to the Federal District Court in California for further proceedings. The ruling by the U.S. Court of Appeals does not bind the California State Appeals Court, which is currently reviewing the State Court judge's pre-emption ruling. Currently, Novo Nordisk does not have any individual trials scheduled in 2018. Novo Nordisk does not expect the pending claims to have a material impact on its financial position, operating profit or cash flow.

## **Forward-looking statements**

Novo Nordisk's reports filed with or furnished to the US Securities and Exchange Commission (SEC), including this document as well as the company's statutory *Annual Report 2017* and Form 20-F, both filed with the SEC in February 2018, and written information released, or oral statements made, to the public in the future by or on behalf of Novo Nordisk, may contain forward-looking statements. Words such as 'believe', 'expect', 'may', 'will', 'plan', 'strategy', 'prospect', 'foresee', 'estimate', 'project', 'anticipate', 'can', 'intend', 'target' and other words and terms of similar meaning in connection with any discussion of future operating or financial performance identify forward-looking statements. Examples of such forward-looking statements include, but are not limited to:

- statements of targets, plans, objectives or goals for future operations, including those related to Novo Nordisk's products, product research, product development, product introductions and product approvals as well as cooperation in relation thereto
- statements containing projections of or targets for revenues, costs, income (or loss), earnings per share, capital expenditures, dividends, capital structure, net financials and other financial measures
- statements regarding future economic performance, future actions and outcome of contingencies such as legal proceedings, and
- statements regarding the assumptions underlying or relating to such statements.

In this document, examples of forward-looking statements can be found under the headings 'Outlook', 'Research and Development update' and Equity'.

These statements are based on current plans, estimates and projections. By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific. Novo Nordisk cautions that a number of important factors, including those described in this document, could cause actual results to differ materially from those contemplated in any forward-looking statements.

Factors that may affect future results include, but are not limited to, global as well as local political and economic conditions, including interest rate and currency exchange rate fluctuations, delay or failure of projects related to research and/or development, unplanned loss of patents, interruptions of supplies and production, product recalls, unexpected contract breaches or terminations, government-mandated or market-driven price decreases for Novo Nordisk's products, introduction of competing products, reliance on information technology, Novo Nordisk's ability to successfully market current and new products, exposure to product liability and legal proceedings and investigations, changes in governmental laws and related interpretation thereof, including on reimbursement, intellectual property protection and regulatory controls on testing, approval, manufacturing and marketing, perceived or actual failure to adhere to ethical marketing practices, investments in and divestitures of domestic and foreign companies, unexpected growth in costs and expenses, failure to recruit and retain the right employees, and failure to maintain a culture of compliance.

For an overview of some, but not all, of the risks that could adversely affect Novo Nordisk's results or the accuracy of forward-looking statements in this document, reference is made to the overview of risk factors in 'The Risks of Doing Business' on pp 40-43 of the *Annual Report 2017*.

Unless required by law, Novo Nordisk is under no duty and undertakes no obligation to update or revise any forward-looking statement after the distribution of this document, whether as a result of new information, future events or otherwise.

Company announcement No 60 / 2018

## **MANAGEMENT STATEMENT**

The Board of Directors and Executive Management have reviewed and approved the financial report of Novo Nordisk A/S for the first six months of 2018. The financial report has not been audited or reviewed by the company's independent auditors.

The financial report for the first six months of 2018 has been prepared in accordance with IAS 34 'Interim Financial Reporting'. The accounting policies adopted in the preparation are consistent with those applied in the *Annual Report 2017* of Novo Nordisk, except for the adoption of new, amended or revised standards and interpretations (IFRSs) as published by the IASB that are endorsed by the EU effective as of 1 January 2018. This includes IFRS 9 'Financial Instruments' applied prospectively and IFRS 15 'Revenue from Contracts with Customers' applied modified retrospectively. Furthermore, the financial report for the first six months of 2018 and Management's Review are prepared in accordance with additional Danish disclosure requirements for interim reports of listed companies.

In our opinion, the accounting policies used are appropriate and the overall presentation of the financial report for the first six months of 2018 is adequate. Furthermore, in our opinion, Management's Review includes a true and fair account of the development in the operations and financial circumstances, of the results for the period and of the financial position of the Group as well as a description of the most significant risks and elements of uncertainty facing the Group in accordance with Danish disclosure requirements for listed companies.

Besides what has been disclosed in the quarterly financial report, no changes in the Group's most significant risks and uncertainties have occurred relative to what was disclosed in the consolidated annual report for 2017.

Bagsværd, 8 August 2018

## **APPENDIX 7: KEY CURRENCY ASSUMPTIONS**

## **APPENDIX 8: NEW ACCOUNTING STANDARDS IN 2018**

As of 1 January 2018 Novo Nordisk applies, for the first time, IFRS 9 'Financial Instruments' and IFRS 15 'Revenue from Contracts with Customers'. As required by IAS 34, the effect of the implementation are disclosed below.

The impact of the implementation of IFRS 9 and IFRS 15 has been immaterial in relation to recognition and measurement.

#### Effect from IFRS 9

The implementation of IFRS 9 'Financial instruments' that replaces IAS 39 'Financial Instruments: Recognition and Measurement', has had the effect that the changes to the fair value of minor shareholdings are now, on an investment-by-investment basis, either recognised in the Income statement or Other comprehensive income. Changes in the fair value of current minor shareholdings are recognised in the Income statement. Previously fair value changes were recognised in Other comprehensive income. Furthermore hedge accounting is applied for the time value of currency options (open at closing date).

Novo Nordisk has implemented these changes using the prospective approach. The effect on the financial statements is specified in the table below.

30 June 2018			
DKK million	Previous accounting practice	Effect from change of practice	New accounting practice
Income statement	_	2	2
Statement of other comprehensive income Equity statement <sup>1)</sup>	2	(2)	_

<sup>1)</sup> As a result of changed accounting practice DKK 90 million is moved from other reserves to retained earnings within equity as an adjustment to opening equity 1 January 2018.

#### Effect from IFRS 15

The group has implemented IFRS 15 'Revenue from Contracts with Customers' using the modified retrospective approach. IFRS 15 replaces the current standards on revenue (IAS 11 'Construction Contracts' and IAS 18 'Revenue').

There is no significant effect on the financial statements.

## **APPENDIX 9: QUARTERLY NUMBERS IN USD (ADDITIONAL INFORMATION)**

Key figures are translated into USD as additional information - the translation is based on the average exchange rate for income statement and the exchange rate at the balance sheet date for balance sheet items. The specified percent changes in DKK are based on the changes in the 'Quarterly numbers in DKK', see appendix 1. The specified percentage change in USD is calculated as a development in USD numbers in this appendix.

Company announcement No 60 / 2018

#### Page 30 of 30

## **APPENDIX 10: NON-IFRS FINANCIAL MEASURES (ADDITIONAL INFORMATION)**

In this Company Announcement, Novo Nordisk discloses certain financial measures of the Group's financial performance, financial position and cash flows that reflect adjustments to the directly comparable measures calculated and presented in accordance with IFRS. These non-IFRS financial measures may not be defined and calculated by other companies in the same manner and may thus not be comparable with such measures.

The non-IFRS financial measures presented in the Company Announcement are:

- Sales growth in local currencies
- Operating profit growth in local currencies
- Free cash flow

#### Sales and operating profit growth in local currencies

Growth in local currencies' means that the effect of changes in exchange rates is excluded. It is defined as sales/operating profit for the period measured at the average exchange rates for the same period prior year compared with realised sales/operating profit for the same period prior year. Countries with hyperinflation as defined in IAS 29 'Financial reporting in hyperinflation economies' are excluded from the calculation to avoid that growth in local currencies are artificially inflated. Management believes that growth in local currencies is relevant information for investors in order to understand the underlying development in sales and operating profit by adjusting for the impact of currency fluctuations.

#### Sales in local currencies

DKK million	H1 2018	H1 2017	Q2 2018	Q2 2017
Net sales	54,337	57,0 <b>9</b> 0	27,407	28,638
Effect of exchange rate	4,882	(692)	1,876	(242)
Sales in local currencies	59,219	56,398	29,283	28,396

#### **Operating profit in local currencies**

DKK million	H1 2018	H1 2017	Q2 2018	Q2 2017
Operating profit	24,652	26,876	12,204	13,386
Effect of exchange rate	3,293	(562)	1,412	(104)
Operating profit in local currencies	27,945	26,314	13,616	13,282

#### Free cash flow

Novo Nordisk defines free cash flow as 'net cash generated from operating activities' less 'net cash used in investing activities' excluding net change of marketable securities. A positive free cash flow shows that the Group is able to finance its activities and that external financing is thus not necessary for the Group's operating activities. Therefore, management believes that this non-IRRS liquidity measure provides useful information to investors in addition to the most directly comparable IRRS financial measure 'Net cash generated from operating activities'.

Free cash flow				
DKK million	H1 2018	H1 2017	Q2 2018	Q2 2017
Net cash generated from operating activities	25,585	22,215	15,770	10,117
Net cash used in investing activities	(5,117)	(1,417)	(2,543)	(725)
Net purchase of marketable securities		(2,006)	-	(1,000)
Free cash flow	20,468	18,792	13,227	8,392
