Abstract

In the past few years, there have been many special purpose hardware designs emerging to support speech recognition systems. This paper tries to identify the the system requirements of different spoken language systems' components, such as search and training. Some general design criteria of speech hardware architecture are also presented. Based on these criteria, we survey a variety of notable special purpose computer architectures designed for speech recognition systems and make a paper-and-pencil evaluation of those architecture alternatives.

This research was supported by the Defense Advanced Research Projects Agency (DOD) and monitored by the Space and Naval Warfare Systems Command under Contract N00039-85-C-0163, ARPA Order No. 5167.

The views and conclusions contained in this document are those of the author and should not be interpreted as representing the official policies, either expressed or implied, of DARPA or the U.S. government.

Keyword : speech recognition, spoken language system, Viterbi search, beam search, stack decoding, GSM (Graph Search Machine), ASPEN (AT&T's Systolic Processing Ensemble), MARS (Microprogrammable Accelerator for Rapid Simulation), Search Machine, BEAM, PLUS.

Contents

1. Introduction	1
2. General System Requirements for Speech Recognition Systems	1
2.1. Search	2
2.1.1. Viterbi Search	2
2.1.2. Stack Decoding	5
2.1.3. Continuous vs. Discrete Density	8
2.2. Training	11
3. Design Criteria of Speech Hardware Architectures	12
4. Survey of Some Notable Systems	14
4.1. AT&T's Graph Search Machine	14
4.2. SRI-Berkeley's Speech Search Machine	15
4.3. AT&T's ASPEN Tree-Machine	17
4.4. MARS	19
4.5. CMU's BEAM accelerator	20
4.6. CMU's PLUS	21

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
